

Describing the Incredible Journey
in Less Than 30 Minutes

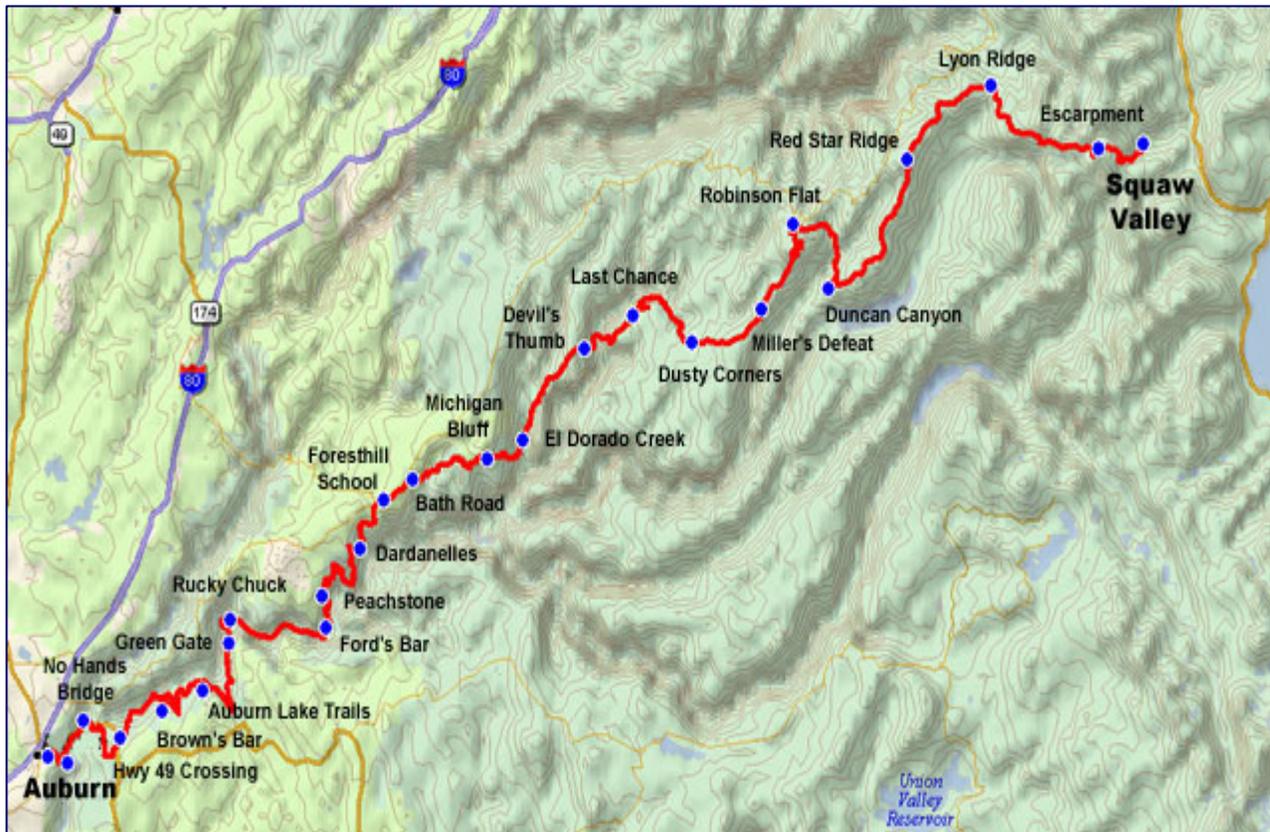

Implementing A Quality Management
System For The Laboratory

Christine Flaherty, MHA, MT(ASCP), CPHQ

Implementing a Quality Management System

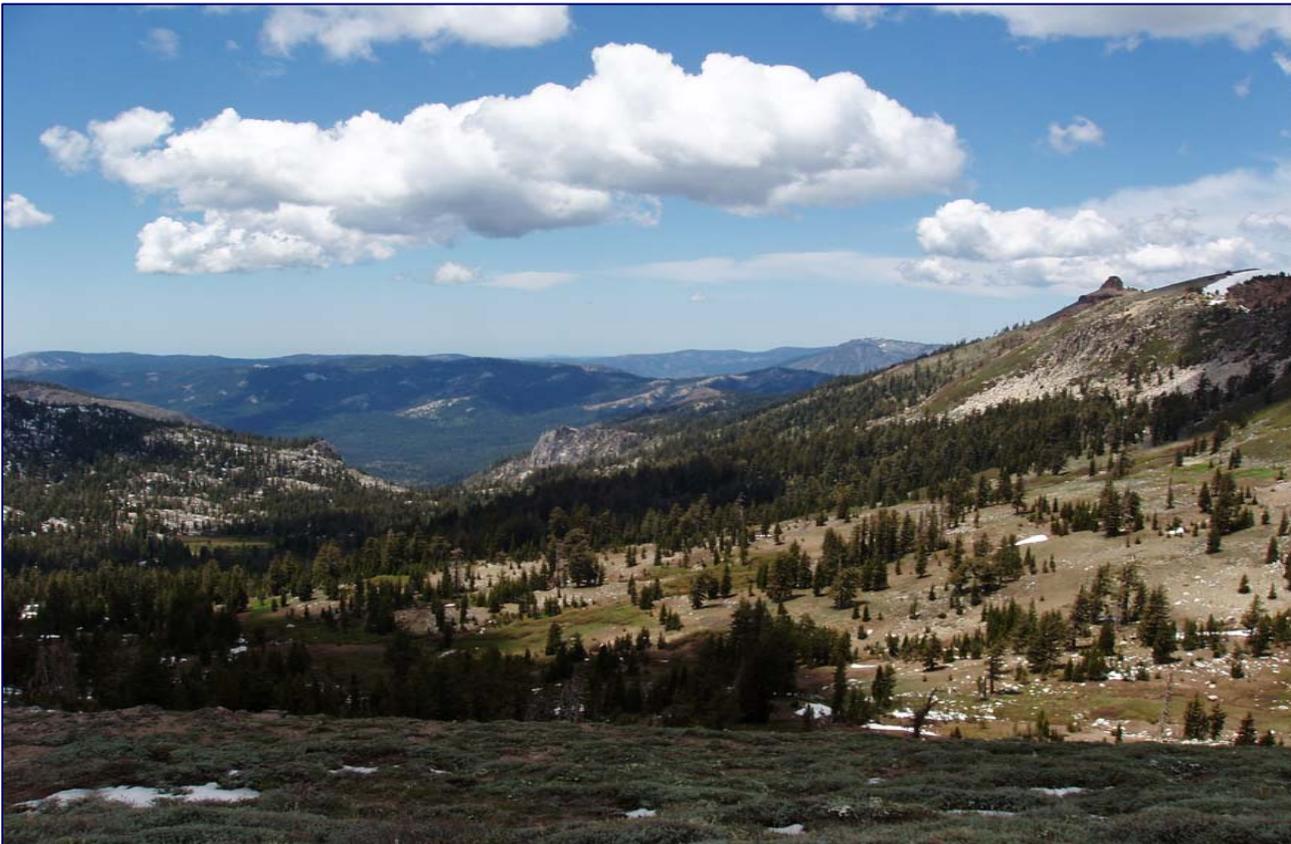

It takes longer than the usual initiative

Implementing a Quality Management System

It is not easy

Implementing a Quality Management System

The finish is worth the pain

Implementing a Quality Management System

Implementing a Quality System

- ❑ 5 hospital laboratories
- ❑ 1 medical foundation laboratory
- ❑ Ambulatory lab serves physicians
- ❑ 20 remote draw sites – 1000+ patients per day
- ❑ 3.8M billed tests per year
- ❑ \$400M gross revenue
- ❑ 300 employees

Implementing a Quality Management System

The Start - 2000

- ❑ 5 hospital laboratories with 5 different approaches to managing quality (QC-focused)
- ❑ Medical Directors engaged with differing levels of enthusiasm
- ❑ Variation
 - ❑ Work processes and procedures
 - ❑ Document structure and version control
 - ❑ Position descriptions, training, assessing competency
 - ❑ Process control, internal assessment
 - ❑ Cost and quality indicators
- ❑ Cost was high, while quality and service were variable

Implementing a Quality Management System

The Finish - 2006

- ❑ 5 hospital laboratories and 1 medical foundation laboratory with a single, standardized approach to managing quality (quality system based)
- ❑ Medical Directors engaged at an optimal level
- ❑ No (or little) variation
 - ❑ Work processes and procedures
 - ❑ Document structure and version control
 - ❑ Position descriptions, training, assessing competency
 - ❑ Process control, internal assessment
- ❑ Cost, quality and service significantly improved

Implementing a Quality Management System

Every Incredible Journey Begins with the First Step

First step – redefined *quality*

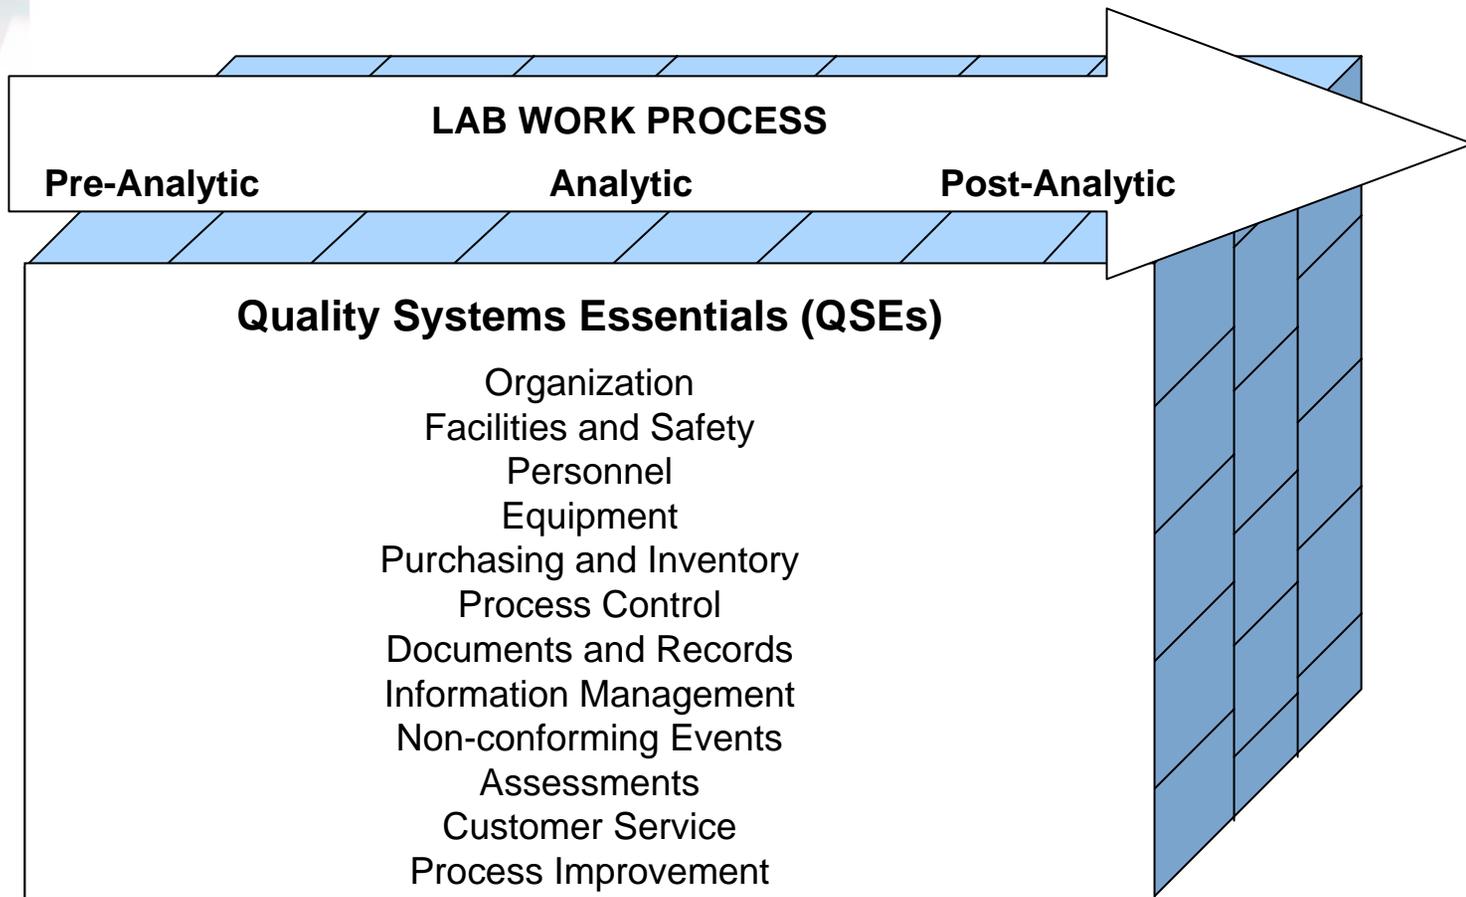

“The ability to consistently provide laboratory results efficiently and effectively.”

Second step – adopted a quality management system model to guide our design and implementation

- Application of a Quality Management System Model for Laboratory Services (CLSI GP26A3)
- A Quality Management System Model for Healthcare (CLSI HS1-A2)

Implementing a Quality Management System

Implementing a Quality Management System

It takes longer than the usual initiative

- ❑ Began in 2000
- ❑ 95% implemented in 2006
- ❑ Estimated hours - development
 - ❑ My own = 1,500 hours in 7 years
 - ❑ 0.1 FTE total
 - ❑ Laboratory Management Team (5) = 600 each in 7 years
 - ❑ 0.2 FTE total
- ❑ Estimated hours – at implementation
 - ❑ 8 hours/employee

Implementing a Quality Management System

It is not easy

- ❑ Began by mapping the laboratory's work process
 - ❑ Pre-.post-and analytic phases
 - ❑ Developed documents of work process
- ❑ Wrote new technical procedures
 - ❑ Developed document numbering system
 - ❑ Developed standard document templates
- ❑ Developed standardized position descriptions
 - ❑ Based on work process activities and tasks
 - ❑ Included quality process activities and tasks

Implementing a Quality Management System

It is not easy

- ❑ Developed standardized orientation process
- ❑ Developed training and competency assessment process
 - ❑ Pre-.post-and analytic phases
 - ❑ Developed documents of work process
- ❑ Developed “Change Management Tool”
 - ❑ Used to plan quality into every change
 - ❑ Comprehensive project checklist based on the QSE’s

Implementing a Quality System

It is not easy

- ❑ Developed the integrated and standardized Quality Management Program (QMP) and the Quality Manual
 - ❑ Developed policy documents for 12 QSE's first
- ❑ Created the Medical and Operations Management Team – oversight of the QMP
 - ❑ Decision making body for standardization to “best practice”
 - ❑ Conduct monthly quality review
 - ❑ Assess the effectiveness of the QMP at meeting the quality goals
- ❑ March 2007 – SMF Lab CAP accredited
- ❑ November 2008 – CAP System accreditation

Implementing a Quality System

The Finish is Worth the Pain

- ❑ Improvement snapshot
 - ❑ Reduced number of position descriptions, procedures, etc
 - ❑ Reduced time to train new employees
 - ❑ Ability to assess competency (pre-, post- and analytic)
 - ❑ Cost reduced from \$15/uos to \$7.20/uos
 - ❑ Proficiency testing success rates (5/6 exceed SH avg)
 - ❑ Employee satisfaction scores increased by >10%
 - ❑ Testing timeliness
 - ❑ Patient and physician satisfaction at 2 of hospital labs

Implementing a Quality System

Things Learned Along The Way

- ❑ The quality system model is descriptive, not prescriptive
 - ❑ Requires each laboratory to create its own, making design decisions along the way
- ❑ An integrated model
 - ❑ Like a puzzle - more than 1 potential starting place
 - ❑ Work is not wasted during implementation
- ❑ Will endure and can be easily updated and refined
- ❑ Enables standardization to “best practice”
- ❑ Changes the operational context for quality
 - ❑ Goes beyond QC and QA

Implementing a Quality System

Thank you!
