

Centers for Disease Control and Prevention Grants Funding Data Query Tips

The Query Tab offers the ability to create a customized view of, and to download, the detailed project information behind the jurisdictional summaries.

Query Tips

- Data for each fiscal year in the tool can be queried independently by selecting the new year in the “Fiscal Year” drop-down box.
- The query tab default setting is to show all data fields (i.e., “columns”) available for each project funded. Users can change how many of the columns are displayed by using the “Column Selection” button.
- The results of queries will offer details about the grantee, such as grantee name, address, and more. This data will also provide details about the grant specifically, such as the award amount, the type of grant, and more.
- The filter capability offers the ability to specify multiple characteristics, such as geography or grantee type to narrow results to a subset of the overall data set. The filter icon above each column heading can be clicked to invoke filters, and the Clear Filter icon can be used to remove filters and show all rows of the data.
- Filters display in red after their default setting of “Select All” is changed.
- Results of queries can be viewed online or downloaded as either a .CSV (comma separated value) file format, or an .XML file (extensible markup language or Excel) format. These formats can be opened with commercially available spreadsheet programs.
- To obtain totals or subtotals for a given query, we recommend that you download the query results to a file, and use commercially available spreadsheet programs to perform totals or subtotals within the file.

For more information about the data provided within the CDC Grants Funding Profiles, please refer to the “About the Data” file specific to the year in which you are interested.
