1. Sex sample sizes may not equal Total sample size due to a few unspecified sex designations in screened sample.

However all sample persons in the interviewed and examined samples have a specified sex designation.

2. Unweighted response rate = [(Unweighted sample size) / (Screener sample size)] × (The screener response rate: 88.7%)

Due to the low screener response rate (defined as screener response rate < 98%) in 2017-March 2020 survey period, the unweighted response rates shown above were adjusted for the screener response rate to incorporate sample loss at the screener level.
