HELP SCREEN:
Balance disorder or problem is a disturbance that causes an individual to feel unsteady when standing or walking. The individual experiences loss of equilibrium (balance) and may fall since he/she is unable to maintain a standing position, or walk, without support.

Dizziness: A general descriptive term that includes various symptoms, such as vertigo (the illusion of a spinning, rocking, falling or other motion), or blurred vision when moving your head.

Light-headedness: A feeling that your sense of space is mildly distorted or not quite sharp, but not that you or objects around you are moving. With light-headedness, you may feel as if you are going to pass out or faint.
The next questions are about symptoms of dizziness, light-headedness, or balance problems. Do not include times when drinking alcohol, using recreational drugs, or taking medications that cause dizziness. In the past 12 months, have you/had SP had problems with…
