

National Health and Nutrition Examination Survey (NHANES)

Phone Follow-Up Dietary Interviewer Procedures Manual

March 2010

TABLE OF CONTENTS

<u>Chapter</u>		<u>Page</u>
1	OVERVIEW OF THE NATIONAL HEALTH AND NUTRITION EXAMINATION SURVEY	1-1
	1.1 History	1-1
	1.2 Goals of the Survey.....	1-4
	1.3 NHANES Data Accomplishments.....	1-4
	1.4 National Center for Health Statistics	1-6
	1.5 Sample Selection.....	1-7
	1.6 Field Organization for NHANES.....	1-8
	1.7 Exams and Interviews in the Mobile Examination Center (MEC)	1-11
	1.7.1 Exam Sessions.....	1-11
	1.7.2 Exam Team Responsibilities.....	1-13
	1.7.3 Examination Components	1-14
	1.7.4 Sample Person Remuneration	1-20
	1.7.5 Report of Exam Findings	1-20
	1.7.6 Dry Run Day	1-21
	1.8 Integrated Survey Information System (ISIS)	1-22
	1.9 Confidentiality and Professional Ethics.....	1-22
2	INTRODUCTION TO THE DIETARY INTERVIEW.....	2-1
	2.1 Dietary Interview Component in the National Health and Nutrition Examination Survey	2-1
	2.2 The Role of the PFU Dietary Interviewer.....	2-3
	2.3 Observers and Visitors.....	2-4
3	GENERAL INTERVIEWING TECHNIQUES.....	3-1
	3.1 Before Beginning the Interview.....	3-1
	3.2 Beginning the Interview.....	3-1
	3.3 Administering the Interview	3-2
	3.3.1 Asking the Questions	3-2
	3.3.2 Maintaining Rapport	3-4
	3.3.3 Difficult Situations.....	3-5
	3.3.4 Incomplete Information.....	3-5
	3.4 Probing.....	3-5
	3.4.1 What is Probing and Why is it Necessary	3-6
	3.4.2 Probing Inappropriate Responses.....	3-7
	3.4.3 Probing Methods Should be Neutral	3-8
	3.4.4 Kinds of Probes.....	3-8

TABLE OF CONTENTS (continued)

<u>Chapter</u>		<u>Page</u>
	3.4.5 The Don't Know (DK) Response.....	3-10
	3.4.6 Additional Guidelines for Probing.....	3-10
	3.4.7 When to Stop Probing.....	3-11
	3.5 General Rules for Recording Answers.....	3-11
	3.6 Ending the Interview.....	3-12
4	DIETARY INTERVIEW APPLICATION FEATURES.....	4-1
	4.1 General Overview of Computer.....	4-1
	4.1.1 Keyboard.....	4-1
	4.2 PFU Dietary Interview Related Systems.....	4-4
	4.2.1 Key Features of the Wrapper Program.....	4-5
	4.2.2 Key Features of the AMPM Program.....	4-7
5	PHONE FOLLOW-UP CONTACT PROCEDURES.....	5-1
	5.1 Check Daily Schedule.....	5-1
	5.2 Document Call Attempts.....	5-5
	5.3 Retry Broken Appointments.....	5-10
	5.4 Reschedule Appointments.....	5-10
	5.5 Reminder Calls.....	5-13
6	CONDUCTING THE 24-HOUR RECALL INTERVIEW.....	6-1
	6.1 Introduction of the PFU Dietary Interview using the USDA Automated Multiple Pass Method (AMPM) Instrument.....	6-1
	6.1.1 Key Features of the 24-Hour Dietary Recall.....	6-2
	6.2 Accessing the Program.....	6-4
	6.3 Introduction to Respondent.....	6-5
	6.4 Step 1: The Quick List Pass (QL).....	6-10
	6.4.1 The Main Food List (MFL).....	6-16
	6.4.2 Leaving the Quick List (QL) Pass.....	6-26
	6.5 Step 2: The Forgotten Foods List (FFL).....	6-27
	6.6 Step 3: The Time and Occasion Pass (T/O).....	6-32

TABLE OF CONTENTS (continued)

<u>Chapter</u>		<u>Page</u>
6.7	Step 4: The Detail and Review Cycle (DRC).....	6-40
	6.7.1 Measuring Guide Instructions Screen	6-42
	6.7.2 Midnight to First Occasion Probe	6-43
	6.7.3 Collecting Details and Amounts	6-44
	6.7.4 Food Source Question	6-89
	6.7.5 Review of Occasion	6-96
	6.7.6 Occasion Location Question	6-97
	6.7.7 Between Interval Probe	6-99
	6.7.8 Last Occasion to Midnight Probe.....	6-100
	6.7.9 Collection of Remainder Foods.....	6-101
6.8	Step 5: The Final Review Probe (FR).....	6-102
6.9	Intake Health-Related Questions	6-103
	6.9.1 Usual Intake	6-103
6.10	Dietary Recall Section Status	6-104
6.11	The Supplement and Antacid Section.....	6-106
6.12	The Post-Recall Section.....	6-106
	6.12.1 Observations Screen.....	6-107
	6.12.2 Post-Recall Section Status Screen.....	6-109
7	SUPPLEMENT AND ANTACID COLLECTION	7-1
	7.1 Basic Scenarios	7-1
	7.2 Recording Other Supplements	7-7
	7.3 Antacid Data Collection.....	7-10
	7.4 No Supplements Reported in the Past 30 Days	7-13
	7.5 No Antacids Reported in the Past 30 Days	7-15
	7.6 Hand Cards	7-17
	7.7 Edits	7-18
8	ADDITIONAL INTAKE PROCEDURES	8-1
	8.1 Proxy and Assisted Interviews.....	8-1
	8.1.1 Proxy Interviews with Child SPs Under 9 Years of Age	8-2
	8.1.2 Assisted Interviews with Child SPs 9 to 11 Years Old	8-3
	8.1.3 Proxy or Assisted Interviews with Adults Unable to Report for Themselves	8-3

TABLE OF CONTENTS (continued)

<u>Chapter</u>		<u>Page</u>
	8.2 Interviewing Children	8-3
	8.3 Data Retrieval Procedures	8-4
	8.3.1 Data Retrieval Criteria	8-5
	8.3.2 Flagging Eating Occasions for Data Retrieval	8-5
	8.3.3 Documenting Data Retrieval Source Information	8-10
	8.3.4 Data Retrieval Collection Procedures	8-18
	8.4 Documenting Missing Meals (if Data Retrieval is Not Required).....	8-19
	8.5 Documenting Skipped Meals	8-19
	8.6 Documenting Fasts on the Recall Day	8-19
	8.7 Documenting Breast-fed Infants	8-19
	8.8 “Same As” (Foods Previously Reported by the SP or Household Member)	8-21
	8.9 Procedures for Misreporting Foods	8-23
	8.10 Adding Remembered Additions	8-24
	8.11 RFL IS FULL (Documenting 41 or more Reported Foods)	8-25
	8.11.1 RFL IS FULL - Recording Primary Foods During the Dietary Recall	8-26
	8.11.2 RFL IS FULL - Recording Primary Linked Foods During the Dietary Recall	8-27
	8.11.3 RFL IS FULL - Recording Primary Foods While Collecting Health-Related Questions	8-28
	8.11.4 RFL IS FULL - Recording an Addition to a Primary Food	8-28
	8.12 ACCESS DENIED (Reporting Food Details When Program Denies Access to Categories)	8-29
	8.13 Water Tips	8-31
9	FLEXIBLE CONSUMER BEHAVIOR SURVEY	9-1
	9.1 Basic Scenario for Adult SPs	9-1
	9.2 Basic Scenarios for SPs Aged 1 to 11 years	9-2
	9.3 Basic Scenarios for SPs Aged 12 to 15	9-6
	9.4 Main Meal Planner Determination Questions	9-8
	9.5 FCBS Respondent Decision	9-12
	9.6 Non-SP Proxy Guidelines	9-18
	9.7 Scheduled FCBS Appointments	9-22
	9.8 Updating the Call History of a Broken FCBS Appointment	9-23
	9.9 Adult Requires Proxy	9-26
	9.10 SP Refusal	9-28

1. OVERVIEW OF THE NATIONAL HEALTH AND NUTRITION EXAMINATION SURVEY

This chapter provides a general history and description of the National Health and Nutrition Examination Survey (NHANES), and an overview of the tasks that staff perform during the survey.

1.1 History

The National Health Survey Act, passed in 1956, provided the legislation authorizing for a survey to provide current statistical data on the amount, distribution, and effects of illness and disability in the United States. NHANES was created to fulfill the purpose of this act. The NHANES 99 for 2004 was the eighth in a series of national examination studies conducted in the United States since 1960, but effective in 2005, NHANES has become a continuous field survey with year-round data collection.

To fulfill the purposes of this act, it was recognized that data collection would involve at least three sources: (1) direct interviews with Americans of all ages; (2) clinical tests, measurements, and physical examinations on sample persons; and (3) facilities where persons received medical care such as hospitals, clinics, and doctors' offices.

To comply with the 1956 act, the National Center for Health Statistics (NCHS), a branch of the U.S. Public Health Service in the U.S. Department of Health and Human Services, has conducted eight separate examination surveys to collect interview and physical examination data.

The first three of these national health examination surveys were conducted in the 1960s:

1. 1960-62—National Health Examination Survey I (NHES I);
2. 1963-65—National Health Examination Survey II (NHES II); and
3. 1966-70—National Health Examination Survey III (NHES III).

NHES I focused on selected chronic disease of adults aged 18-79. NHES II and NHES III focused on the growth and development of children. The NHES II sample included children aged 6-11,

while NHES III focused on youths aged 12-17. All three surveys had an approximate sample size of 7,500 individuals.

Beginning in 1970 a new emphasis was introduced. The study of nutrition and its relationship to health status gained importance as researchers began to discover links between dietary habits and disease. In response to this concern, under a directive from the Secretary of the Department of Health, Education and Welfare, the National Nutrition Surveillance System was instituted by NCHS. The purpose of this system was to measure the nutritional status of the U.S. population and changes over time. A special task force recommended that a continuing surveillance system include clinical observation and professional assessment as well as the recording of dietary intake patterns. Thus, the National Nutrition Surveillance System was combined with the National Health Examination Survey to form the National Health and Nutrition Examination Survey (NHANES). Five surveys of this type have been conducted since 1970:

1. 1971-75—National Health and Nutrition Examination Survey I (NHANES I);
2. 1976-80—National Health and Nutrition Examination Survey II (NHANES II);
3. 1982-84—Hispanic Health and Nutrition Examination Survey (HHANES);
4. 1988-94—National Health and Nutrition Examination Survey (NHANES III); and
5. 1999-05—National Health and Nutrition Examination Survey (NHANES 99).

NHANES I, the first cycle of the NHANES studies, was conducted between 1971 and 1975. This survey was based on a national sample of about 28,000 persons between the ages of 1-74. Extensive data on health and nutrition were collected by interview, physical examination, and a battery of clinical measurements and tests from all members of the sample.

NHANES II began in 1976 with the goal of interviewing and examining 28,000 persons between the ages of 6 months and 74 years. This survey was completed in 1980. To establish a baseline for assessing changes over time, data collection for NHANES II was made comparable to NHANES I. This means that in both surveys many of the same measurements were taken in the same way, on the same age segment of the U.S. population.

While the NHANES I and NHANES II studies provided extensive information about the health and nutritional status of the general U.S. population, comparable data were not available for many

of the ethnic groups within the United States. HHANES, conducted from 1982 to 1984, aimed at producing estimates of health and nutritional status for the three largest Hispanic subgroups in the United States—Mexican Americans, Cuban Americans, and Puerto Ricans—that were comparable to the estimates available for the general population. HHANES was similar in design to the previous HANES studies, interviewing and examining about 16,000 people in various regions across the country with large Hispanic populations.

NHANES III, conducted between 1988 and 1994, included about 40,000 people selected from households in 81 counties across the United States. As previously mentioned, the health status and characteristics of minority groups can be very different from that of nonminority groups. Thus, black Americans and Mexican Americans were selected in large proportions in NHANES III. Each of these groups comprised separately 30 percent of the sample. It was the first survey to include infants as young as 2 months of age and to include adults with no upper age limit. For the first time a home examination was developed for those persons who were unable or unwilling to come into the examination center but would agree to an abbreviated examination in their homes. To obtain reliable estimates, infants and young children (1-5 years) and older persons (60+ years) were sampled at a higher rate. NHANES III also placed an additional emphasis on the effects of the environment upon health. Data were gathered to measure the levels of pesticide exposure, the presence of certain trace elements in the blood, and the amounts of carbon monoxide present in the blood.

NHANES 99, conducted between 1999 and 2005, was the first of the series of surveys designed with the goal of becoming a continuous, annual survey. Each single year, and any combination of consecutive years of data collection, comprises a nationally representative sample of the U.S. population. This new design allows annual statistical estimates for broad groups and specific race-ethnicity groups as well as flexibility in the content of the questionnaires and exam components. New technologic innovations in computer-assisted interviewing and data processing result in rapid and accurate data collection, data processing, and publication of results.

The number of people examined in a 12-month period is about the same as in previous NHANES—about 5,000 a year from 15 different locations across the Nation. The data from the NHANES are used by government agencies, state and community organizations, private researchers, consumer groups, companies, and health care providers.

In addition to NHANES I, NHANES II, Hispanic HANES, and NHANES III, several other HANES projects have been underway since 1982. These projects have been a part of the HANES Epidemiological Follow-up Survey, a multiphase project that has been conducting follow-up interviews with the NHANES I survey population in order to provide a longitudinal picture of the health of the U.S. population.

1.2 Goals of the Survey

NHANES 2009, the current version of the survey, was designed to continue the collection of information about the health and diet of people in the United States. These data are used to fulfill specific goals. The overall goals of NHANES 2009 are to:

- Estimate the number and percent of persons in the U.S. population and designated subgroups with selected diseases and risk factors;
- Monitor trends in the prevalence, awareness, treatment, and control of selected diseases;
- Monitor trends in risk behaviors and environmental exposures;
- Analyze risk factors for selected diseases;
- Study the relationship between diet, nutrition, and health;
- Explore emerging public health issues and new technologies; and
- Establish a national probability sample of genetic material for future genetic testing.

1.3 NHANES Data Accomplishments

NHANES data have been used to influence policy and improve the health of the U.S. population in many ways since the survey series was established. For the past 40 years, the U.S. Public Health Service has been interviewing and examining tens of thousands of Americans. Currently, teams of doctors, nutritionists, and health technologists are conducting the National Health and Nutrition Examination Survey (NHANES) in communities across the United States. Information from the survey will be updated annually.

Some of the contributions of the NHANES data include:

- **Pediatric Growth Charts.** Developed by the National Health and Nutrition Examination Survey, the NHANES growth charts are found on the walls of pediatricians' offices and clinics not only across the United States, but also around the world. With new information on younger babies, the current charts have been expanded and improved.
- **Vitamins and Minerals.** The earlier NHANES showed that low iron levels were a serious problem for many people, including women of childbearing age, preschool children, and the elderly. As a result, the government decided to fortify grain and cereal with iron to correct this deficiency. The surveys also showed the need for folate to eliminate another deficiency and prevent birth defects. Today, we have a wealth of information at our fingertips and, indeed, on our food labels to help us make better choices about our diets. Much of that information comes directly from the National Health and Nutrition Examination Survey.
- **Cholesterol Levels.** The first survey in the 1960s led public health officials to sound the alarm about the link between high cholesterol levels and the risk of heart disease. When NHANES started testing, one-third of adults had high cholesterol. Today fewer than 1 in 5 adults have high cholesterol. Changes in diet and lifestyle, all built on information from the national survey, have sharply reduced our risk of dying from a heart attack. These strategies have also helped doctors find ways to better treat heart attack patients and speed their recovery.
- **Lead-free Gasoline.** It was NHANES that gave the first clear-cut evidence that Americans had too much lead in their blood. This led Congress, the Environmental Protection Agency, and others to phase out the use of lead as an additive in gasoline, and the results have been remarkable. By the 1990s, NHANES found that only 4 percent of Americans had elevated lead in their blood, but it remains a problem for certain groups, especially poor children living in old houses, in cities where lead paint was once common. The survey helps public health agencies pinpoint where lead still remains a problem.
- **Hypertension.** The prevalence of hypertension in adults has not significantly changed since 1999. Recent NHANES data show that 29 percent of adults aged 18 years or older were hypertensive (systolic BP \geq 140 mmHg or diastolic BP \geq 90mmHg or taking medications for hypertension). The prevalence of hypertension was nearly equal between men and women. Among hypertensive adults, 78 percent were aware of their condition.
- **Breastfeeding.** Breastfeeding rates have increased significantly over the past decade. Rates were higher among those with higher income compared with those who had a lower income. Rates among mothers 30 years and older also were higher than those of younger mothers. Breastfeeding rates have now exceeded the Healthy People 2010 target of 75 percent of infants who were breastfed.

- **Blood Folate Levels.** Folate is an essential vitamin for good health. Women of child-bearing age are among the population groups that been shown previously to have low blood folate levels. Low blood folate levels are associated with an increased risk of neural tube birth defects. Beginning in 1998, the Food and Drug Administration (FDA) required the addition of folic acid (a form of folate) to all enriched breads, cereals, flours, corn meal, pasta products, rice, and other cereal grain products sold in the U.S. NHANES data showed that very large increases in blood folate levels of the U.S. population occurred after fortification up to 1999-2000. Small fluctuations in levels have occurred since that time.

As the NHANES survey continues to collect and update health information, there are other ways in which the information will be of use, including:

- **Osteoporosis.** This condition, in which bones get weaker as people grow old, is blamed for many of the fractures among the elderly. The National Health and Nutrition Examination Survey measures bone density of participants.
- **Environmental Smoke.** Recent NHANES data found that nearly 9 out of 10 nonsmoking Americans were exposed to smoke either at home or on the job.
- **Obesity.** Despite the public health gains in recent years, more Americans are overweight than ever before. Today, more than half of the adults in the U.S. are overweight, and the number of overweight children and teens has doubled in the past decade. This has led public health experts to look for ways to improve both diet and fitness.
- **Changes in Food/Diet.** Today consumers can find a wide range of low fat and light foods in their grocery stores, from dinner entrees to snacks. As the food we eat changes, NHANES helps monitor whether these new foods and dietary changes actually are in the best interest of our health.
- **Immunizations.** The National Health and Nutrition Examination Survey has turned up important information about the extent of hepatitis B infections, and led to the recommendation that all infants and children be vaccinated against it. Though babies and children are the primary targets for immunizations, the survey also has alerted doctors to the importance of tetanus shots for older people.

1.4 National Center for Health Statistics

The Division of Health and Nutrition Examination Surveys (DHANES) is one of the survey divisions at the CDC's National Center for Health Statistics (NCHS).

DHANES is responsible for planning, operations, informatics, analysis, and reporting activities related to the family of health and nutrition examination surveys. These surveys range from the capstone cross-sectional National Health and Nutrition Examination Survey, to longitudinal studies, and more recent efforts with community-based studies. DHANES is comprised of more than 60 Federal employees who have training and expertise in diverse areas including public health, informatics, survey methodology, and statistics. The Federal staff are augmented by contractor staff working on- and offsite.

The Division consists of four branches and the Office of the Division Director. The DHANES Office of the Director coordinates the major activities in the Division. Each of the four branches consists of a multidisciplinary team with specific duties and responsibilities.

1.5 Sample Selection

A sample is defined as a representative part of a larger group. Since it is impossible to interview and examine everyone in the United States for NHANES, a representative sample is taken of the U.S. population. By studying a representative sample of the population, it is assumed that the findings would not have been too different had every person in the U.S. been studied. Because generalizations about the population will be made, it is extremely important that the sample be selected in a way that accurately represents the whole population. Statisticians calculate the size of the sample needed and take into consideration the geographic distribution and demographic characteristics of the population, such as age, gender, race, and income.

An introductory letter is sent to each household in the sample. A few weeks after the letter goes out, interviewers visit each listed household and use carefully designed screening procedures to determine whether any residents are eligible for the survey. If eligible residents are present, the interviewer then proceeds to introduce the study, presents the Sample Person (SP) with a survey brochure, and obtains a signed consent for the household interview. The brochure contains detailed information on the survey, the household interview, and the mobile examination center (MEC) examination.

A signed consent form must be obtained from each eligible individual before the household interview can be conducted. A refusal to sign the consent form is considered a refusal to participate in the survey. After the interview is completed, the interviewer then explains the MEC exam, obtains another signed consent form for the MEC exam, and contacts the field office to schedule a MEC appointment for

the SP. All SPs aged 12 years and older must sign the Examination Consent forms to participate in the MEC examination. Parental consent is also required for SPs under 18 years of age. SPs aged 7-11 years old are asked to sign the Examination Assent form. An additional consent form is required for consent to future general research and genetics testing for both adults (ages 18+) and parents of children under 18 years. This consent form gives permission to store a small sample of blood and urine for future specimen testing and to collect a sample for genetics testing. A refusal to sign the MEC consent or assent form is considered a refusal to participate in the examination phase of the survey. Examinations will not be performed on sample persons who do not sign a consent form.

1.6 Field Organization for NHANES

There are two levels of field organization for this study - the home office staff and the field staff.

- **Home Office Staff from Westat** – Project staff from Westat are responsible for overseeing the field teams and field work.
- **Field Office (FO) Staff** – For this survey, an office will be opened at every survey location (stand). Each field office will have a Study Manager (SM), Office Manager (OM), a Field Manager (FM), and one Assistant Office Manager (AOM).
 - The **Study Manager (SM)** is responsible for the overall management of operations at a stand.
 - The **Office Manager (OM)** is responsible for the stand office operations and is the main conduit for the flow of work and information between the MEC and the household interviewing staff. She or he will supervise one or more local office clerks hired to assist with office activities. The OM reports to the SM.
 - The **Field Manager (FM)** has primary responsibility for the supervision of the household interviewers. The FM also assists the SM and supervises the activities of the Assistant Office Managers. She or he will deal with administrative issues, ISIS problems, and preparations for the next stand.
 - The **Assistant Office Managers (AOMs)** are primarily responsible for data entry into the Integrated Survey Information System (ISIS), editing data collection materials, and verification of interviewer work. The AOMs report to the FM and also work closely with the OM.

- **Facilities Specialist (FES)** – One Facilities and Equipment Specialist will travel with each field office team and caravan to oversee the maintenance and operation of the trailers.
- **Household Interviewers** – These staff members are primarily responsible for identifying and enrolling the survey participants, conducting the household interviews, and appointing the study participants for the MEC exam. Specifically, household interviewers will locate occupied residential dwelling units, administer the Screener to select eligible sample persons, obtain signed consents to the household interview, conduct the interviews, set up examination appointments, obtain consents for the MEC exam, conduct field reminders for MEC appointments, and assist in rescheduling broken, cancelled, and no-show appointments.

Several times a week, household interviewers visit the field office and report to the field manager. During the course of the study, interviewers also interact on a daily basis with other field office staff and home office staff.

- **MEC Staff** – These health professionals conduct the health exams. The survey includes two exam teams. There are 16 individuals on each traveling team: 1 MEC manager, 1 MEC coordinator, 1 licensed physician, 3 medical technologists, 4 health technologists, 1 registered dental hygienist, 2 MEC interviewers, 2 dietary interviewers, and 1 phlebotomist. In addition, local assistants are recruited, trained, and employed at each stand to assist the exam staff.

The following section describes the steps that are always completed before the opening of a stand and provides an overview of the tasks that interviewers are expected to perform.

Steps completed prior to interviewing include:

1. Statisticians scientifically select certain segments in the sampling area. A segment is an area with definite boundaries, such as a city block or group of blocks containing a cluster of households.
2. Segments are listed by NHANES staff. Listing is the systematic recording on special forms of the address of every dwelling unit (DU) located within the segment. Commercial buildings and other structures not intended as living quarters are not listed.
3. A sample of dwelling units is selected from the listing forms. This sample is the group of addresses that interviewers visit in order to conduct interviews.
4. Immediately before data collection begins, an advance letter is sent to each dwelling unit with a mailing address. This letter briefly describes the study and informs the household that an interviewer will contact them in the near future.

Steps followed by the interviewers at a stand include:

1. Obtain assignment of sampled dwelling units to contact from the field manager.
2. Locate dwelling units using addresses on the Household Folders and listing/mapping materials in the Segment Folder.
3. Contact an adult who lives in the selected household (occupied residential dwelling unit) and administer the Screener using a laptop computer.
 - The Screener is an interview that lists all the individuals who live in the household, divides the household into families, and collects all the demographic characteristics necessary to immediately determine if there are persons in the household eligible for further interviewing.
 - All instructions necessary to determine eligibility and to select sample persons (SPs) are programmed in the CAPI Screener.
4. If all persons in a household are ineligible, no further work is done with the case. If eligible household members are identified, interviewers continue to conduct all the necessary tasks associated with the case.
5. In eligible households, obtain a signed interview consent form prior to completing the medical history and/or the family questionnaire.
6. Administer the appropriate medical history CAPI interview to eligible respondents. The questions asked depend on the age of the SP.
7. Administer the Family questionnaire to one adult family member from each eligible family in the household.
8. Schedule a MEC appointment for each SP, coordinating the MEC schedule and the SP schedule.
9. Obtain signed consent form(s) for each SP for the examination, confirm the examination appointment(s) with the field office, and give each SP an appointment slip.
10. If there is more than one eligible family in a household, repeat this process with each additional family.
11. Record the result of each contact or attempted contact with the household on the Call Record located in the Household Folder.

Interviewers also support the survey by conducting field reminders prior to MEC appointments and rescheduling broken, cancelled, or no-show MEC appointments. When an interview has been completed, interviewers edit their work, carefully reviewing all forms for completeness and

legibility. Interviewers report in person to the field manager at the stand office for regularly scheduled conferences, usually every other day. During these conferences, interviewers discuss completed cases; discuss problems with incomplete cases; receive new case assignments; and report time, expenses, and production.

To ensure the accuracy and completeness of the survey, all interviewer work is edited by the field office staff, and then validated by recontacting respondents. After this review, supervisors provide interviewers with feedback concerning the quality of the work.

1.7 Exams and Interviews in the Mobile Examination Center (MEC)

Examinations and interviews are conducted in a mobile examination center (MEC), which is composed of four specially equipped trailers. Each trailer is approximately 48 feet long and 8 feet wide. The trailers are set up side-by-side and connected by enclosed passageways. During the main survey, detachable truck tractors drive the trailers from one geographic location to another.

Exhibit 1-1 shows a floor plan for the MEC. The interior of the MEC is designed specifically for this survey. For example, the trailers are divided into specialized rooms to assure the privacy of each study participant during exams and interviews. Many customized features have been incorporated including an audiometry room that uses a soundproof booth, a wheelchair lift, and a wheelchair-accessible bathroom available to assist participants with mobility problems. Exhibit 1-2 shows the locations of the various exams within the MEC.

1.7.1 Exam Sessions

The MEC operates 5 days a week and includes weekday, evening, and weekend sessions. Two 4-hour sessions are scheduled each day with approximately 10-12 SPs per session. During a stand, workweeks rotate to offer a variety of MEC appointments on weekday mornings, afternoons, and evenings, and every weekend.

Exhibit 1-1. Floor plan of the MEC

Exhibit 1-2. MEC exams and rooms

Trailer	Room	Room Use
Trailer 1	Coordinator	Welcoming and waiting area for SPs
	Home Urine Collection	Home Urine Collection, Proxy exam
	Respiratory Health	Exhaled Nitric Oxide Spirometry
	Anthropometry	Body measurements
Trailer 2	Physician	Physician examination
	MEC Interview 1	Health interview, OGTT Trutol administration, Proxy Exam
	MEC Interview 2	Health interview, OGTT Trutol administration, Proxy Exam
	Dietary Interview 1	Dietary interview
	Dietary Interview 2	Dietary interview
Trailer 3	Oral Glucose Tolerance Test (OGTT)	Oral glucose tolerance Trutol administration
	Bone Density (DXA)	Bone Density scans
Trailer 4	Oral Health	Dental examination
	Audiometry	Hearing tests
	Phlebotomy/OGTT	Drawing of blood samples Oral glucose tolerance Trutol administration
	Laboratory	Processing of biological samples
	Label/shipping area	Lab area for labeling and shipping specimens
	Staff area	Staff area that houses main computer system

1.7.2 Exam Team Responsibilities

There are 16 individuals on each exam team. In addition, a local assistant will be hired to assist the staff in managing examinee flow. The duties of the exam team members are summarized below:

- One MEC manager supervises the exam staff, oversees exam flow, and supports exam operations.
- One coordinator directs the flow of SPs through the MEC examination process. The coordinator manages all SP appointments, verifies that all components are completed for each SP, and exits SPs from the MEC.
- One physician conducts the medical examination and records results, reviews the results of the complete blood count and pregnancy test, and serves as the safety officer for the MEC.
- One registered dental hygienist conducts the oral health exam and obtains the oral HPV specimen.
- Two health (MEC) interviewers administer questionnaires for physical and mental health information. The interviewers are also trained to administer the proxy exam, the OGTT exam, the home urine collection exam, and to record for the body measures exam.
- Two dietary interviewers administer the dietary questionnaire. The interviewers record a 24-hour dietary recall of the types and amounts of foods consumed by the SP in the last 24 hours. They are also trained to administer the OGTT and home urine collection exam.
- Four health technologists (some with radiologic technology and/or other health training) take and record body measurements, conduct respiratory health exams and bone density (DXA) scans, administer hearing tests, record for the oral health exam, conduct the home urine collection exam, and administer the Trutol solution for the glucose tolerance test.
- Three medical technologists conduct clinical laboratory tests on biological and environmental specimens, record the results of the tests, and prepare and ship specimens to various laboratories.
- One phlebotomist conducts the phlebotomy interview, administers the fasting questionnaire, and draws blood for laboratory tests and special studies like the volatile organic compound special study. The phlebotomist is also responsible for administering the Trutol and drawing a second blood sample for the GTT test. They are also trained as a backup examiner for other MEC components like body measures, oral health recording, and the home urine collection.

Each staff member is part of a team of professional persons with specific assignments that must be completed in order to accomplish the overall objective of the survey. Each individual must be aware of and respect the job demands placed upon other staff members, maintain an attitude of tolerance and consideration for fellow members of the team, and willingly perform extra tasks that may be assigned to support other staff members in the performance of their duties. MEC staff members may be requested to perform tasks not directly related to their specific professional skills in order to implement the overall data collection plan.

1.7.3 Examination Components

The full examination for an adult takes approximately 3½ hours, but the actual length depends on the SP's age. Some exams are done only on certain age groups so the exam profiles vary, even among adult SPs. The exam components are described briefly below and summarized in Exhibit 1-3.

Exhibit 1-3. Examination components

Audiometry	12-19, and 70+
Bone Density (DXA)	8 +
Body Measures	All ages
Dietary Interview	All ages
Glucose Tolerance	12+
Laboratory	1+
Urine Sample	6+
MEC (Health) Interview	8 +
Home Urine Collection	6+
Oral Health	3+
Phlebotomy	1+
Physician	All ages
Blood Pressure	8+
Respiratory Health	6-79
Spirometry	
Exhaled Nitric Oxide	
Bronchodilation with spirometry	Limited subsample
Volatile Organic Compounds	12+

- **Audiometry**

The goals of the hearing exam are to obtain normative data on the hearing status of the adolescent and elderly U.S. population and to evaluate certain covariates that may be related to hearing loss, such as noise exposure. The hearing component tests youth aged 12-19 years, and adults aged 70 and over, by performing pure tone air conduction audiometry and tympanometry. Because air conduction thresholds alone cannot detect middle ear disease, tympanometry is conducted to identify potentially medically-correctible conditions which may be contributing to hearing impairment.

- **Body Composition**

The DXA component will use dual energy x-ray absorptiometry to evaluate skeletal health on SP's aged 8 years and older. Two DXA scans, AP spine and femur, will be used to assess overall skeletal changes that often occur with age by measuring bone mineral content (BMC) and bone mineral density (BMD). DXA measurements can also be used to provide information on early gender and ethnic changes in the rate of bone accretion and to determine the age when skeletal accretion ceases and when peak bone mass occurs.

- **Body Measures or Anthropometry**

All SPs will have body measurements taken. The exam will include height, weight, and other body measurements such as skinfold and arm girth, chest expansion and spine flexion. These measurements will be used to assess growth, obesity, and body fat distribution, and will provide information that can be used as a reference for later studies. Chest expansion and spinal flexion measures will provide data on the proportion of the population affected by spine disorders. Measurements of height and weight will allow for a revision of the child growth charts now in widespread use. Measuring body fat is important because it is associated with hypertension, adult diabetes, cardiovascular disease, gallstones, arthritis, and some forms of cancer. Furthermore, obesity and overweight can have an affect on the mental, physical, and social well-being of individuals.

- **Dietary Interview**

Dietary information has been collected in NHANES since the 1970s. Researchers and policymakers rely on NHANES data for detailed information about the foods and beverages that are consumed by the U.S. population. In addition to providing important national reference data on food and nutrient intakes that are obtained on all survey participants, the data help us to learn about food patterns of ethnic subgroups, the adequacy of diets consumed by young children and older persons, and the contribution of food to total nutrient intakes. Total nutrient intakes from food and dietary supplements can be computed by combining NHANES Dietary Recall data with the dietary interview supplement and antacid recall information. Many Federal agencies use NHANES data to evaluate Federal regulations in the areas of food fortification and human risk assessment analyses that are used to measure human exposure to contaminants that are found in food.

The goal of the dietary component is to estimate total intake of foods, food energy and nutrients, nonnutrient food components, and plain drinking water by the U.S. population; and assess dietary behaviors and the relationship of diet to health. Quantitative dietary intake data are obtained for all subjects by means of a 24-hour dietary recall interview using a computer-assisted dietary data entry system.

Two dietary interviews will be administered to all SPs. The primary dietary interview is administered in person in the MEC (the MEC In-person interview). At the end of the MEC dietary interview, the interviewers will schedule the SPs for a Phone Follow-up (PFU) 3-10 days later. The PFU is a follow-up dietary interview conducted by telephone by dietary interviewers from the home office. In addition, a second dietary phone interview is offered to all SPs aged 1 year and older who complete the MEC dietary interview. Proxy interviews will be conducted for children aged 1-11 years. Each household is also eligible to participate in an interview about food and food shopping. The adult who purchases the food for the household is asked to complete the interview. This interview, called the Flexible Consumer Behavior Survey, is also conducted by the home office dietary interviewers.

- **Home Urine Collection**

Microalbuminuria, or protein excretion in the urine, is an important indicator of early kidney disease, and is a prognostic indicator for diabetes, cardiovascular disease, and mortality. Microalbuminuria is measured by the urine albumin/creatinine ratio on the specimen provided on the day of the MEC exam. A second urine specimen is collected within 10 days of the MEC exam to compare the level of protein excretion with the first urine sample obtained in the MEC. During the home urine collection exam, the SP is given the necessary instructions and materials to successfully obtain and mail a urine specimen directly to a laboratory.

- **Oral Glucose Tolerance Test (OGTT or GTT)**

The purpose of this test is to reassess the prevalence of diabetes and impaired glucose tolerance (IGT) in the U.S. population. Persons with impaired glucose tolerance (IGT) – 15.6 percent of the U.S. population – are at high risk for developing diabetes. Also, IGT is an important risk factor for a number of other adverse health conditions and mortality. IGT is defined on the basis of an abnormal oral glucose tolerance test (OGTT). Persons without diabetes but with an OGTT 2-hr value of 140-199 mg/dl are considered to have IGT. Recent national and international randomized controlled trials have shown that diabetes can be delayed or prevented among persons with IGT.

The GTT will allow estimation of the prevalence of IGT and, thus, prediabetes in the U.S. population, surveillance of trends in the prevalence and awareness of these conditions, study of the risk factors for IGT and prediabetes, and examination of IGT as a risk factor for health conditions and mortality. Timely data on IGT and prediabetes are particularly important as the Nation initiates efforts to prevent diabetes among persons with prediabetes. These data on IGT and prediabetes are critical to targeting, designing, and evaluating prevention efforts.

A fasting glucose blood test is performed on all participants 12 years and older who are examined in the morning session after a 9-hour fast. After the venipuncture, participants are asked to drink 75 milligrams of Trutol® and to have a second venipuncture 2 hours (plus or minus 15 minutes) after consuming the Trutol. The blood glucose level from the second venipuncture will be used to determine if an SP has IGT.

- **Laboratory**

The laboratory component includes the collection and processing of various biological and environmental specimens including blood for subjects 1 year and older, and urine for subjects 6 years and older. On-site pregnancy testing excludes pregnant women from other examination components such as DXA. Complete Blood Counts (CBCs) are also performed in the MEC laboratory. All other specimen testing is performed by Federal, private, and university-based laboratories under contract to NCHS.

Urine is collected from SPs aged 6 and older to assess kidney function, measure levels of mercury, heavy metals, iodine and arsenic, and assess environmental exposures to pesticides such as organophosphates, phthalates, polycyclic aromatic hydrocarbons, phytoestrogens, and perchlorates.

- **MEC (Health) Interview**

SPs aged 8 and older will have a health interview in the MEC. Generally, the questions asked in the MEC are considered to be more sensitive than the questions asked in the household. The MEC environment is believed to be a more appropriate setting for the administration of these questions. All eligible SPs will be asked questions in a face-to-face interview. In addition, persons who are 12–69 years old will be asked a series of more personal questions in complete privacy. The SP will listen to questions through a set of earphones and will enter responses by touching a computer screen.

Depending upon the age of the SP, the interview may consist of questions about tobacco, drug, and alcohol use, reproductive health (birth control practices, pregnancy and reproductive history, sexual activity), health behaviors (physical activity, weight history), kidney conditions and bowel health, arthritis, current health status and mental health, and exposure to certain chemicals. Children 8-11 years will only be asked questions about weight history.

- **Oral Health**

SPs aged 3 and older will receive an oral health exam conducted by registered dental hygienists. All examinees will be checked for tooth loss, cavities, restorations, and sealants. SPs 30 years and older will also be asked some questions about denture use and will be assessed for periodontal conditions; SPs aged 20–59 years will also be tested for human papilloma virus.

Oral and dental diseases affect many in the United States. Dental caries and tooth loss remain significant problems affecting the Nation's oral health. Although average

dental caries rates for school-aged children have declined, nearly a half of all children still have caries. Additionally, more than 90 percent of adults in the United States have experienced caries. Dental sealants, an effective caries prevention measure, have been underutilized in the United States, with less than one-quarter of children aged 5-17 having them.

Over the past four decades, oral and dental health characteristics collected in national surveys supported by the Federal Government have been critical for monitoring health status, risk factors for disease, and access to preventive and treatment services. The 2005-06 NHANES oral health component will meet a critical need to continue monitoring trends in dental caries and tooth retention. More specifically, this NHANES will produce oral health data to monitor five oral health objectives in the Healthy People 2010 health promotion: dental caries experience, untreated dental decay, no permanent tooth loss, complete tooth loss, and dental sealants.

■ **Phlebotomy**

SPs aged 1 and older will have blood drawn. The amount drawn will depend on the person's age. It is important to draw blood from study participants for a number of reasons:

- Knowledge can be gained about how healthy a person is by measuring for various substances in his or her blood.
- Blood tests can provide early warnings of potential health problems, perhaps before physical signs appear. For example, a blood test for lead might indicate exposure to unsafe lead levels before an individual shows any physical signs of lead poisoning. Also, diabetes mellitus will be assessed by measures of plasma glucose, insulin, and glycohemoglobin in examinees ages 12 years and older. Diabetes is a large, growing, and costly public health problem in the United States and disproportionately affects racial and ethnic minorities. About 17 million Americans have diabetes and more than 1 million new cases of diabetes are diagnosed each year. Alarmingly, type 2 diabetes (formerly considered an adult disease) is now being diagnosed in children and adolescents and there has been a large increase in diagnosed diabetes among adults <40 years of age.
- Blood tests will also indicate the presence of STDs such as Chlamydia and gonorrhea, hepatitis, herpes, and HIV infection.
- Blood tests help in monitoring nutritional status, one of the key goals of NHANES. What researchers discover from this data can lead to health policy recommendations—the need for more vitamin fortification, for example.
- The blood testing also provides information about the levels of cholesterol and other blood lipids, another important study goal.

- **Physician**

All SPs see the physician. The physician measures blood pressure and pulse of all participants over 8 years of age, explains to female SPs how the HPV examination will be completed and explains the meaning of the STD/HIV test results to eligible SPs. The physician explains how SPs receive the results of STD/HIV tests so that the results remain totally confidential to the SP. Beginning in 2007, the physician will screen participants who qualify for the bronchodilator with spirometry exam, obtain consent for, and administer the bronchodilator. The physician must be present on the MEC before any exams can be conducted, and the physician is in charge of any medical emergency that occurs on the MEC.

- **Respiratory Health**

Beginning in 2007, respiratory health (RH) was incorporated in the NHANES study. RH will be collected by means of an assessment of lung function testing, or spirometry, and a measurement of exhaled nitric oxide (ENO). The objective of collecting this data is to assess the prevalence of asthma and adult chronic obstructive pulmonary disease in the U.S. population. All SPs aged 6-79 years will be eligible to participate in the component. SP's will be excluded from the RH exam if they answer positively to any pre-exam safety exclusion questions.

RH has three subcomponents: (1) spirometry, (2) ENO measurements, and (3) repeat spirometry measurements after the administration of a bronchodilator. For the third subcomponent, a subset of SPs whose baseline spirometry results show lung function values below a certain threshold, and will be provided with an opportunity to repeat spirometry after inhaling a bronchodilator medication. The MEC physician will first evaluate the participant to determine if the participant meets the requirements for safe bronchodilator administration. The physician will then obtain written informed consent, and then instruct the SP in the administration of the bronchodilator, and then administer the medication. Results from repeat spirometry testing following the bronchodilator could potentially provide a more detailed picture of each individual's breathing problem, i.e., an indication of whether the person is likely to have asthma or chronic obstructive pulmonary disease.

ENO provides a noninvasive marker measure of airway inflammation, a factor in asthma and possibly other lung diseases. Evaluation of airway inflammation, a precursor of asthma symptoms, is important in the investigation of underlying disease. Currently, there are no U.S. population-based estimates of ENO baseline levels for normal subjects, or for those persons with asthma and chronic obstructive pulmonary disease.

- **Volatile Organic Compounds/Perchlorate (VOC) Special Study**

The purpose of the VOC/Perchlorate study is to determine the prevalence of exposures to chemicals called Volatile Organic Compounds (VOCs) and Perchlorates. Volatile organic compounds are emitted as gases from certain solids or liquids. VOCs include a variety of chemicals, some of which may have short- and long-term adverse health effects. Concentrations of many VOCs are consistently higher indoors (up to

ten times higher) than outdoors. VOCs are emitted by a wide array of products numbering in the thousands. Examples include paints and lacquers, paint strippers, cleaning supplies, pesticides, building materials and furnishings, office equipment such as copiers and printers, correction fluids and carbonless copy paper, graphics and craft materials including glues and adhesives, permanent markers, and photographic solutions.

Perchlorate is an oxidizer used in rocket fuel, explosives, and road flares, and it also occurs naturally in the atmosphere. Since the 1950s, unused amounts of the chemical have been dumped into unlined pits throughout the United States, where it has seeped into water supplies. The chemical is highly mobile and soluble in water, aiding its dispersion through the environment.

VOCs and Perchlorates are tested on a half-sample of participants over age 12; tap water from participants' homes are collected by the household interviewers, and in the MEC, blood is collected from the participant during phlebotomy.

1.7.4 Sample Person Remuneration

All examinees receive remuneration for the MEC visit as well as payment for transportation expenses. The MEC visit remuneration is age-related and may include an extra fasting incentive if the SP is eligible. SPs who complete the dietary phone interview and the Consumer Behavior Questionnaire also receive an incentive.

1.7.5 Report of Exam Findings

Examinees receive the results of many of the tests and exams conducted in the MEC, though some results are used only for research and are not reported.

One report, a Preliminary Report of Findings, is produced on the day of the SP's examination and includes results that are immediately available and require no further evaluation or interpretation. Before the examinee's departure from the MEC, the coordinator prints a report that can include height, weight, complete blood count, blood pressure and heart rate, and results from the oral health and audiometry examinations. The MEC physician reviews the blood pressure and complete blood count test results for abnormalities and discusses any problems with the SP (or his or her parent.) Approximately 12-16 weeks after the exam, NCHS mails the remainder of the examination results to the SP after appropriate clinical or quality reviews are completed. This Final Report of Findings will include

all the results from the Preliminary Report of Findings and may include laboratory tests like liver and kidney function tests and lipids, bone density scan results, retinal image scan reports, and spirometry results. Seriously abnormal results are reported to the SP via telephone by NCHS before the remaining findings are mailed.

Certain tests, such as those for sexually transmitted diseases (Chlamydia, herpes simplex, and human papillomavirus) and human immunodeficiency virus (HIV) are released only to the sample person using a specially devised procedure requiring a unique password.

To further assist sample persons, an in-house NCHS survey response team is available to answer calls from NHANES participants regarding the results from the Report of Finding System. The response team effort works both as a triage mechanism and a surveillance system. A receipt and control record is kept on all sample person inquiries. Also available at no cost to sample persons is an 800 toll-free telephone number that can be accessed during regular scheduled business hours. The response team members include a physician, a nurse with a doctorate degree, and other staff who are trained to answer specific questions.

Tests and procedures conducted in the MEC are not considered diagnostic exams and are not a substitute for an evaluation by a medical professional. No clinical treatments or health interventions of any type are performed in the MEC. If a health problem is discovered during the course of the MEC exam, the physician offers to contact the examinee's personal healthcare provider or recommend a local physician or clinic for follow-up care. If a sample person is found to have a serious condition requiring immediate attention, the local rescue squad may be summoned or the SP will be advised to seek immediate medical treatment.

1.7.6 Dry Run Day

At the beginning of the examination period, one-half day is devoted to calibrating instruments, practicing MEC procedures, and collecting biological specimens that serve as blind quality control samples. A dry run day is scheduled immediately before the first exam day of every stand to make sure that all equipment is operational, supplies are adequate, and the facility is working properly. All procedures in the dry run are completed as though the actual exam session was being conducted. The only

difference is that the examinees are volunteers who are not part of the sample for the survey. Volunteers may include local residents, local officials, or field employees or guests of NCHS.

1.8 Integrated Survey Information System (ISIS)

The Integrated Survey Information System (ISIS) is a computer-based infrastructure designed to support all survey operations including sample management, data collection, data editing, quality control, analysis, and delivery of NHANES data. With a collection of customized subsystems, the ISIS links the field office, mobile examination center, Westat home office, and NCHS during field operations. Each component in NHANES such as Dietary Interview has a computer application for direct data entry. Data collected in the Dietary Interview room of the mobile examination center is directly entered in the ISIS system computers. In addition, data from biomedical equipment such as the Dual Energy X-Ray Absorptiometry (DXA) scanner for body composition is directly downloaded to the ISIS system where it is displayed on the computer screen and stored in the system database.

1.9 Confidentiality and Professional Ethics

All information regarding this study must be kept strictly confidential except as required by law. This includes location of survey sites. Since this study is being conducted under a contract with the National Center for Health Statistics, the privacy of all information collected is protected by two public laws: Section 308(d) of the Public Health Service Act (42 U.S.C.242m) and the Privacy Act of 1974 (5 U.S.C. 552a).

Each person working on the study must be continuously aware of the responsibility to safeguard the rights of all the individuals participating in the study. Each participant should be treated courteously, not as a sample number. Never divulge names or any other information about study participants except to the research team. Refrain from any discussions about study participants, in or out of the MEC, which might be overheard by people not on the survey staff. All of the members of the research team are under the same legal, moral, and ethical obligations to protect the privacy of the SPs participating in the survey. No participant names will be included in any reports prepared about the survey and neither NCHS nor the contractor is allowed to release information that would identify study participants without the consent of the participants.

Cooperation from the public is essential to the success of survey research. A great deal of effort is expended in obtaining cooperation from many national, regional, state, and local officials and the general public. It is the responsibility of every field employee to build on the integrity of the survey to encourage continued access to study participants during current and future surveys. Professional conduct, both on and off the job, is extremely important.

Each staff member has a responsibility for promoting good public relations. The Public Health Service and the contractor will be judged by the actions of the staff both on and off duty; consequently staff must be discreet in speech and action. Personal appearance and behavior must be governed by these same considerations. Please be aware of the audience at all times and avoid statements or actions that could shed an unfavorable light on the survey.

Staff will be asked to sign a pledge of confidentiality before the survey begins. This pledge states that they are prohibited by law from disclosing any information while working on the survey to anyone except authorized staff of NCHS and the contractor, and that they agree to abide by the contractor's Assurance of Confidentiality.

2. INTRODUCTION TO THE DIETARY INTERVIEW

2.1 Dietary Interview Component in the National Health and Nutrition Examination Survey

Dietary information has been collected in NHANES since the 1970s. Researchers and policymakers rely on NHANES data for detailed information about the foods and beverages that are consumed by the U.S. population. In addition to providing important national reference data on food and nutrient intakes that are obtained on all survey participants, the data help us to learn about food patterns of ethnic subgroups, the adequacy of diets consumed by young children and older persons, and the contribution of food to total nutrient intakes. Total nutrient intakes from food and dietary supplements can be computed by combining NHANES Dietary Recall data with household interview dietary supplement information. Many Federal agencies use NHANES data to evaluate Federal regulations in the areas of food fortification and human risk assessment analyses that are used to measure human exposure to contaminants that are found in food. All of these monitoring and research applications are dependent on the quality and completeness of the dietary interview data.

In the current survey, two dietary interviews will be administered to all SPs. The primary dietary interview is administered in person in the MEC (the MEC In-person interview). A follow-up dietary interview is conducted by telephone from the home office and is called “the Phone Follow-up (PFU) interview.”

The MEC In-person interview will be administered during the MEC exam along with the other examination components. At the end of the MEC dietary interview, the interviewers will schedule the sample persons (SPs) for a PFU interview 3-10 days later. Dietary telephone interviewers at the Westat home office will conduct the PFU interviews.

The dietary interview is comprised of three sections—the Dietary Recall section, the Supplement and antacid use section, and the Post-Recall section. The same computer-assisted dietary interview system and similar quality control procedures are used for the MEC In-person and PFU dietary interviews. The computerized Dietary Recall interview and data processing systems we currently use were implemented into the survey at the beginning of 2002. These systems were developed by Westat under contract to the Agricultural Research Service (ARS) of the U.S. Department of Agriculture

(USDA). While the two dietary interviews collect similar data, there are some differences that are described below.

MEC In-person interview. The MEC In-person interview collects 24-hour recall data in the Dietary Recall section, supplement and antacid use in the past 24 hours, and a short set of Post-Recall questions. A set of 3-dimensional measuring guides, including glasses, bowls, mugs, mounds, circles, thickness sticks, spoons, a ruler, cartons, water bottles, and some 2-dimensional tools, such as a grid, two wedges and pictures of shapes, chicken pieces, and spreads, are used in the MEC In-person interview to help the respondent estimate the portion size. In addition, the MEC dietary interviewers will schedule the PFU interview, dispense a set of measuring guides, and instruct the respondents on how to use the guides during the PFU interview.

PFU interview. The PFU interview collects Dietary Recall data, Supplements and antacids, and a subset of the Post-Recall questions. The PFU interviewers are located at the Westat home office in the same area as the NHANES dietary coders. Each SP will receive a reminder call prior to the scheduled interview. The measuring guides used for the PFU were given to the SP by the MEC interviewer at the end of the MEC In-person interview. The guides consist of a set of measuring cups, measuring spoons, a set of household spoons, a 12" ruler, and a 2-dimensional Food Model Booklet (FMB). The FMB is a spiral booklet that contains pictures of glasses, bowls, mugs, pats/spreads, mounds of food, circles, a grid, a wedge, thickness blocks, and pictures of shapes and chicken pieces. Each SP will receive \$30.00 for his or her participation in the PFU interview.

After the Post-Recall, phone interviewers offer participants the opportunity to participate in the Flexible Consumer Behavior Survey (FCBS). The FCBS is a 15-minute phone questionnaire about food and food shopping.

Other data related to the Dietary Recall interview are collected in the household interview. These dietary behavior and food security status assessment data include questions on dietary practices, participation in food assistance programs, infant feeding practices, type of home water supply, history of anemia, height and weight history, lifestyle eating habits, vitamin/mineral supplement and antacid usage, household food sufficiency, and food security status. In addition to the dietary assessment, the NHANES nutritional assessment components include anthropometric and body composition measurements, nutritional biochemistry and hematology tests, clinical examinations, and physical fitness and physical functioning assessments. These nutritional assessment components of the survey were designed by a team

of researchers from NCHS and other government agencies. While the survey was being planned, government agencies were invited to submit research proposals for topics and interview questions that would meet their specific nutrition information needs. The dietary interview system and questionnaire specifications that NCHS provided to Westat reflect these information needs. NCHS and Westat staff will have primary responsibility for monitoring the quality of data that are obtained during the course of the survey.

2.2 The Role of the PFU Dietary Interviewer

The PFU dietary interviewer will be responsible for administering the telephone follow-up dietary interview with all sample persons (SPs). The information will be collected and recorded in an automated Dietary Recall system. In collecting the data for NHANES, the dietary interviewer will be the liaison between the respondent and the dietary coding system.

The primary goal of the 24-hour recall is to collect a detailed list of all the foods and beverages the SP consumed within a 24-hour period, time and place of consumption, name of meal or snack, and details needed for accurate food coding. Food models will be used to aid respondents in estimating amount of intake. The dietary interviewer establishes a rapport with the respondent, obtains the most accurate, objective, and complete data, and enters these data into the automated system. Throughout the interview, it is important that the dietary interviewers maintain their professionalism, while creating an environment in which the SP feels comfortable to respond freely.

The 24-hour Dietary Recall interview is comprised of three parts—the 24-hour recall, the Supplement and antacid use section, and a short set of Post-Dietary Recall questions. Information collected from the 24-hour recall interview will be coded and linked to a database of nutrient composition of foods. Calculations of total daily intakes of energy and 51 dietary components, including 19 individual fatty acids will be derived from these data. At the end of the Dietary Recall section, a question is asked to collect information on respondent's usual intake. Following the Dietary Recall section, you will administer the Supplement and antacid use questions and then complete a set of observation questions. At the conclusion of the Post-Recall, the FCBS section follows. The FCBS is described in Chapter 9.

The dietary interviewer may conduct the interview in English or Spanish. Proxy interviews will be conducted for children less than 6 years old and other SPs who cannot report for themselves

because of age or disability. Children who are 6-11 years old will be asked to provide their own data assisted by an adult household member. The preferred proxy is the person responsible for preparing the SP's meals.

Exhibit 2-1. Table of proxy and assisted interviews

Age of SP	Main Respondent
Under 6 Yrs	Proxy
6 Yrs to 11 Yrs	SP, with Proxy Assistant
12 Yrs+	SP*

*Proxy is used if necessary.

2.3 Observers and Visitors

NCHS and Westat staff will conduct the quality control monitoring and data review activities for the component. Representatives from NCHS and Westat will visit the telephone center to talk to the survey staff, observe interviews, and monitor the examination protocols and time requirements.

During the course of the survey, there will also be scheduled visits by collaborators and contract staff who are involved with various components of the survey. Collaborators from other government agencies including the U.S. Department of Agriculture (USDA), the Environmental Protection Agency (EPA), the National Institutes of Health (NIH), and the Food and Drug Administration (FDA) may schedule visits to the telephone center (through Westat) and request meetings with the dietary interviewers. You will be notified in advance of any visits by outside groups. Generally speaking, collaborators are interested in learning how the survey “works.” For example, they may ask how survey participants respond to a telephone-administered Dietary Recall interview and if they are able to remember what they ate the day before. Some researchers are interested in a particular aspect of dietary methodology such as estimating food portion sizes while others are interested in how particular questions are being answered because they may want to use the same (or similar) instrument in another survey or plan to analyze the data. Interviewers should speak from their own experiences, offering what they have observed while collecting the information rather than offering opinions as to the importance or relevance of the information. If the visitors have specific questions you are not able to answer, they should be referred to NCHS.

Visitors may also ask about the dietary interview system that you use to record the Dietary Recall information. You may be asked to describe the screens and the approach used to record information. A brief description of the interview format, data entry, the food probe screens, data entry fields, online food and brand lists, and data editing is useful. Copies of training manuals, a list of the measurement aids that are used, and other specific information about the component can be requested through NCHS. If someone requests a hard copy of a screen, it is best to refer him or her to the supervisor. The supervisor in the telephone center can provide them with a copy of some “sample screens” that were used in the dietary training manual. *Never share papers with SP information.* The survey has strict confidentiality rules.

3. GENERAL INTERVIEWING TECHNIQUES

3.1 Before Beginning the Interview

Before beginning the interview, take some time to make sure you are thoroughly prepared. Thoroughly review your manual and other materials provided to you during training until you fully understand all aspects of your job. Practice doing the interview until you are comfortable using the automated system and probing techniques. This practice will help in building your confidence so that you can deal with any situations you may encounter when you begin interviewing. Your ability to work comfortably will help keep your respondents interested in the interview and will help your interviews go smoothly. Respondents will quickly lose interest if you are constantly stopping, losing track of your place, and stumbling over questions or probes.

Check to make sure you have all your materials and that they are organized in an orderly way.

3.2 Beginning the Interview

When you first make contact with a respondent, your initial task will be to establish a friendly but professional relationship. Your own confident and professional manner will reassure the respondent and set a tone that will enable you to complete the interview in an efficient manner. Experience with past surveys has indicated that there are three main factors that increase the likelihood that a respondent will consent to being interviewed. They include: establishing rapport, convincing the SP of the importance of the survey, and convincingly responding to the SPs questions and objections.

Establishing Rapport. “Rapport” is the term used to describe the personal relationship between you and the respondent. Rapport provides the foundation for good interviewing. Your introductory remarks and the way you answer any questions the respondent may ask will strongly influence the rapport that develops between you. What you say and how you say it should set the tone for the friendly, cooperative, but businesslike relationship that will continue to develop throughout the interview. You must make a concerted effort to engage the SP during the interview. It could be very easy to become so absorbed in the computer screen that you forget you are dealing with a person.

Responding to the Respondent's Questions and Objections. Even respondents who are convinced of the importance of the study may, for a variety of reasons, be reluctant to grant the interview. Your friendly manner, your introductory statements, and your success and confidence in answering the respondents' questions will help you sell both yourself and the survey to the respondents. Your effectiveness will be increased by your knowledge that your job is legitimate and important, and by your thorough understanding of what you are doing and how to do it.

Your own state of mind—your conviction that the interview is important—will strongly influence the respondent's cooperation. Your belief that the information you obtain will be significant and useful will help motivate the respondent to answer fully and accurately. Most people want to be heard and are happy that you have asked their opinions. Those who are reluctant to give specific information will often do so willingly, if they are convinced that good use will be made of it and that their privacy will be protected.

3.3 Administering the Interview

Your task is to collect accurate information. You must have a thorough understanding of the general principles for administering the interview and comprehend fully its confidential nature. The material in the following sections of this manual will acquaint you with the general principles and procedures to follow when collecting survey data.

3.3.1 Asking the Questions

Collecting accurate and reliable data requires that every respondent hears exactly the same questions read in exactly the same way. Even small changes in the way you ask a question can affect the way a respondent answers and, in the long run, affect the results when researchers combine the answers given by large numbers of respondents. The basic rules for asking survey questions, discussed below, are all designed to ensure uniformity in the way questions are asked of respondents.

Always remain neutral. During the entire interview you must always maintain a completely neutral attitude. As an interviewer, you must never allow anything in your words or manner to express criticism, surprise, approval, or disapproval of the questions you ask or of the answers respondents give.

An important part of your role as an interviewer is to get the respondent actively involved in the interview, to encourage him or her to talk comfortably and freely in response to your questions. While encouraging the respondents to talk freely, however, you must carefully avoid saying or doing anything to influence the content of the respondent's answers. No matter what topics you ask about, no matter how strongly you agree or disagree with the respondent's answers, and no matter how interesting, unusual, or discouraging you might find those answers to be, you must always maintain the same neutral and professional stance during the interview. You are there to ask for and record the respondent's answers, not to influence or advise in any way.

At times, particularly if your respondent is talking freely, you may feel that he or she has already answered a question before you get to it. Do not skip over the question, but confirm the response that you heard.

To be a good interviewer, you must be comfortable with the questions you ask. If you feel uncomfortable with certain questions, such as the food security questions, it is likely that you will transmit something of that feeling to the respondent and influence the answers you receive. If you are uneasy with some questions, you should practice them repeatedly until you can ask them in a simple, straightforward, matter-of-fact way. Occasionally you will find a respondent who refuses to answer some questions, but usually you will find that as long as you can deal with all of your questions in the same relaxed and professional manner, your respondents will answer without hesitation.

Ask all questions as worded. You must read each question completely and exactly as it is worded to ensure the SP understands the meaning. For the answers obtained by different interviewers to be combined, there must be no doubt that each respondent heard exactly the same question before responding. However, there may be situations when you will just confirm a response. For example, when an SP reports the time of an occasion during the QL pass, you can confirm that time during the Time and Occasion pass. If you must repeat a question because the respondent did not hear you the first time or did not understand the question, reread the entire question.

Even though you feel that the question could be worded much more simply, do not improvise. Every word is there for a purpose. Emphasize only those words that are underlined or in bold type. Pause at commas or, when answer categories are included in the question, after each answer category. Read everything in a natural, even-toned manner.

Provide explanation. At times respondents may ask you to define words or to explain some part of a question. We have provided many definitions and explanations in the Question-by-Question Specifications. However, there may be situations when the SP requests clarification about foods or probes that you will need to answer. Use your good judgement in these situations. Do not provide information that will bias the SP, but do provide clarification that will help SPs respond more accurately.

Discourage unrelated conversation. Occasionally a question may lead a respondent to begin reminiscing or to relate a lengthy story having little or no relevance to the survey. As an interviewer, your task is to discourage such irrelevant conversation and keep the discussion focused on the interview. In some ways, this requires that you subtly teach the respondent how to be a good respondent. Maintain a businesslike attitude, acknowledge answers with neutral comments such as “I see,” or “OK,” and tactfully interrupt rambling and irrelevant answers to bring the conversation back to the question you have asked. The respondent will soon learn how to provide the kinds of answers you need. If you must interrupt a respondent, do it politely, taking care not to antagonize him or her. You might say something like:

- “That sounds very interesting, but what I need to ask is...”
- “I see what you mean, but let me repeat that last question...”

3.3.2 Maintaining Rapport

You began your rapport-building process with your introduction and it must be continued throughout the interview. Through accepting and understanding behavior and your interest in the respondent, you can create a friendly atmosphere in which the respondent can talk freely and fully.

Occasionally rapport may be broken during the interview for some reason; for example, the respondent may feel that a particular question is “too personal,” such as the food security questions. If this happens, take time to reassure the respondent that he or she may speak freely without fear. Restating the

confidential nature of the interview and the impersonal nature of the survey may help to comfort the respondent. If a respondent refuses to answer a question after you have reassured him or her of confidentiality, do not press the respondent—enter a refusal response. The procedure will be explained later in the manual.

3.3.3 Difficult Situations

If the respondent agrees to be interviewed but maintains a hostile demeanor that impacts on the data you collect, you must document this in the observation section of the interview. This is described in a later chapter.

3.3.4 Incomplete Information

Respondents may not always be able to provide complete information about the food consumed. This is very common with proxy interviews. If the SP and the proxy respondent cannot provide complete information about a meal or food, and the SP is less than 12 years old or an adult who requires proxy assistance, you must attempt data retrieval. This procedure is described in detail in Chapter 8.

If the respondent cannot provide complete information because he or she can't remember, follow the procedures for documenting unknown foods (Chapter 8).

3.4 Probing

The quality of the interview depends a great deal on your ability to probe meaningfully and successfully. During training, we will discuss and demonstrate appropriate probing techniques for each specific part of the dietary interview. The following section is a brief introduction to probing.

3.4.1 What is Probing and Why is it Necessary

Probing is the technique you will use to stimulate discussion and obtain more complete information. We probe when a respondent's answer is not meaningful or is incomplete, i.e., when it does not adequately answer the question. There are a number of reasons respondents sometimes do not answer the question to our satisfaction.

In everyday social conversation, people normally speak in vague and loose terms. It is understandable that respondents will at first answer our questions in a way that is not clear or specific. It is important to encourage the respondent to express himself or herself more concretely, in very specific terms.

Sometimes respondents will think that they are answering a question when all they are doing is simply repeating an answer that was already given, or simply repeating parts of the question. A respondent can talk a great deal and still be just repeating the question in different words.

Respondents will sometimes miss the point of the question. Many times they will give responses that seem to answer the question, but when you look further, they are not to the point of the question and are therefore irrelevant. It is easy to be "taken in" by a respondent who is talkative and gives a lengthy and detailed response that is actually quite beside the point; it is not the answer to the question asked. In most cases, a respondent gives an irrelevant response because he or she has missed an important word or phrase in the question.

Probing, therefore, has two major functions. First, probing motivates respondents to enlarge, clarify, or explain the reasons for their answers. Second, probing focuses the respondent's answer so that irrelevant and unnecessary information can be eliminated. All this must be done, however, without introducing bias or antagonizing the respondent.

Some examples of answers that, for different reasons, fail to answer the questions properly are given next. Because of the answers given, each requires probing.

Examples of answers that require probing:

Question: Now let's talk about plain drinking water. Did (you/NAME) drink any tap water yesterday, including filtered tap water and water from a drinking fountain?

Answer: My doctor says I should drink more water.

Question: Was the amount of food that (you/NAME) ate yesterday much more than usual, usual, or much less than usual?

Answer: Well I usually don't have pancakes at breakfast.

3.4.2 Probing Inappropriate Responses

Sometimes a respondent will answer using words different from those in the answer categories you read. When this happens, do not make assumptions about what the respondent intends. If the respondent's answer does not clearly fit one of the provided answer categories, you must probe for a response you can code. Sometimes the best probe is repeating the original question. At other times, the best approach might be to ask, "Well, which comes closest?" and repeat all the answer categories.

At times a respondent will feel that none of the responses are suitable, or that under certain conditions they would choose one answer and under different conditions another. In this situation, you should try to get the respondent to generalize by repeating the question and saying, "Just generally speaking, is it this way or that?" or "Most of the time," or "In most cases," etc. If the respondent insists that he or she can't choose, be sure to enter exactly what is said, and let the home office decide how it should be coded.

Example:

Question: How much tap water did (you/NAME) drink yesterday?

Answer: Well, not very much.

Probe: I see. But can you tell me, looking at the glasses in the booklet, about how much tap water did (you/NAME) drink yesterday?

Answer: Well, I really can't.

3.4.3 Probing Methods Should be Neutral

It is very important to always use neutral probes. By this we mean you should not imply to the respondent that you expect a specific answer or that you are dissatisfied with an answer.

Remember, the reason for probing is to motivate the respondent to answer more fully or to focus the answer, without introducing bias. The potential for bias is great in the use of probes. Under the pressure of the interviewing situation, the interviewer may quite unintentionally imply that some answers are more acceptable than others or may hint that a respondent might want to consider this or include that in giving responses. You must be careful not to do this.

The following example consists of a response from the SP, and two possible probes. The first of these probes is neutral; the other is not.

Example:

SP: I had a cup of coffee at 9:00 a.m.

Neutral Probe: Did you add anything to your coffee?

Non-neutral Probe: So you probably added cream and sugar?

The non-neutral probe suggests a specific answer to the respondent and thus leads the respondent toward that answer, rather than leaving the range of possible responses completely open for the respondent to specify.

3.4.4 Kinds of Probes

There are several different neutral probes that appear as part of a normal conversation that can be used to stimulate a fuller, clearer response.

An expression of interest and understanding. By saying such things as “uh-huh” or “I see” or “yes,” the interviewer indicates that the response has been heard, that it is interesting, and that more is expected.

An expectant pause. The simplest way to convey to a respondent that you know he or she has begun to answer the question, but has more to say, is to be silent. The pause allows the respondent time to gather his or her thoughts.

Repeating the question. When the respondent does not seem to understand the question, or misinterprets it, seems unable to decide, or strays from the subject, it is often useful to repeat the question. Many respondents, when hearing the question for the second time, realize what kind of answer is needed.

Repeating the respondent's reply. Simply repeating what the respondent has said is often an excellent probe. Hearing the response just given often stimulates the respondent to further thought.

Asking a neutral question or comment. Neutral questions or comments are often used to obtain clearer and fuller responses. The following are some suggestions for probing questions that may help explore many types of insufficient answers.

PROBES TO CLARIFY:

- “What do you mean exactly?”
- “What do you mean by...?”
- “Could you please explain that a little? I don't think I quite understand.”

PROBES FOR SPECIFICITY:

- “Could you be more specific about that?”
- “Tell me more about that.”

PROBES FOR RELEVANCE:

- “I see. Well, let me ask you again... (REPEAT EXACT QUESTION).”

PROBES FOR COMPLETENESS:

- “What else?”
- “What else can you think of?”

3.4.5 The Don't Know (DK) Response

The “I don't know” answer can mean a number of things. For instance,

- The respondent doesn't understand the question and says DK to avoid saying he or she doesn't understand;
- The respondent is thinking the question over, and says DK to fill the silence and give himself or herself time to think;
- The respondent may be trying to evade the issue because he or she is afraid of giving a wrong answer, or because the question seems too personal; or
- The respondent may really not know or really may have no opinion on the question.
- Try to decide which of the above may be the case. Don't be in too big a rush to settle for a “don't know” reply. If you sit quietly—but expectantly—your respondent will usually think of something. Silence and waiting are frequently your best probes for a “don't know” reply.
- Always try at least once to obtain a reply to a “don't know” response, before accepting it as the final answer. But be careful not to antagonize respondents or force an answer. If they say again that they “don't know,” proceed to the next appropriate question after coding the DK reply.

3.4.6 Additional Guidelines for Probing

The following rules and examples provide further guidance to help you select probes that will not bias respondent's answers.

Probe for Clarity and Specificity. Don't ask “Do you mean ____ or _____?” Such a probe suggests only one or two possible answers, when the respondent may actually be thinking about other possibilities. Do use probes for clarity and specificity when a respondent's answers are unclear.

Example:

Question: Did you add anything to your cereal?

Answer: Yes, sweetener.

Neutral Probe: What kind was it?

Non-neutral Probe: Do you mean Equal or Sweet ‘n Low?

Probe for Completeness. Don’t try to sum up in your own words what someone has said, because this may suggest to the respondent that YOUR idea of his or her response is the “right answer.” Do use probes for completeness to make certain that you’ve obtained full answers.

Example:

Question: How much of the brownie did you actually eat?

Answer: I had two.

Neutral Probe: What was the shape of the brownie?

Non-neutral Probe: Were these square brownies?

3.4.7 When to Stop Probing

You should stop probing when you have obtained all the necessary information about the respondent’s diet. When you have received sufficient clarification from the respondent so that you (and home office staff) know exactly what he or she had in mind—only then will you have a complete answer, and only then should you stop probing. However, if at any time the respondent becomes irritated or annoyed, discontinue probing. We do not want the respondent to refuse the rest of the interview.

3.5 General Rules for Recording Answers

So far, we have talked about how to ask the questions and how to obtain clear and complete answers. Both of these are very important jobs. However, it is also critical that the SP’s answers are accurately recorded. Specific rules for recording using the automated system will be discussed throughout training. The following general rules always apply. Recording or entering answers using the automated system is quite simple.

Verbatim recording. When a respondent elaborates on a response, use the respondent’s own language word for word. Don’t correct or summarize what you think the respondent means; let the

respondent speak for himself or herself. We are as interested in the kinds of words a respondent uses as in the meaning of an answer. If you are conducting the interview in Spanish, enter the responses verbatim in that language. These responses, however, must be translated into English later.

Be sure to include the pronouns (he, she, I, they). Without pronouns the meaning of the answer is frequently not as clear as you think.

3.6 Ending the Interview

All people who give their time for an interview are entitled to courteous and tactful treatment. Try to leave respondents with the impression that they have taken part in an interesting and worthwhile experience—one they would be willing to repeat.

After all questions have been asked, indicate your appreciation to respondents by thanking them; also mention that their contribution has been most helpful in providing important information to the study. Remember that the respondent is familiar with your task from the discussion at the beginning of the interview, so don't spend too much time going over the same information. Spend a few minutes answering any additional questions your respondent may have; then close the interview.

4. DIETARY INTERVIEW APPLICATION FEATURES

This chapter describes the features of the instruments you will be using to conduct the dietary interview. It includes an overview of the computer and a discussion of the format and navigational features of the instruments.

4.1 General Overview of Computer

The computer is connected to a network computer where all the information is downloaded when you finalize the interview. Your computer consists of three components: a monitor, a keyboard, and a mouse. The terminal works through an exchange of messages between the terminal operator (you) and the computer.

Each step in using the computer to conduct the dietary interview will be explained to you: how to turn on the computer and access the program, how to use the keys on the keyboard, and how to conduct the interview. The following diagrams and descriptions have been inserted to give you some insight into the computer and its components. If you do not thoroughly understand a certain key or function, do not be concerned; each will be discussed in much greater detail later in the manual. With practice, the location of the keys on the keyboard, the function of each key, and how everything works together to obtain the necessary data for the 24-hour recall will become clear.

4.1.1 Keyboard

You will use a number of keys on the keyboard to enter data and navigate through the interview. These are described below and shown in Exhibits 4.1 and 4.2.

Backspace Key. Press the **Backspace** key to erase any information that you have typed in. The **Backspace** key erases one character to the left of the cursor if depressed and released, or continues to erase if held down. This function will mostly be useful to you when using comment boxes and OS, and the soup category.

Number keys. Use the top row of the keyboard or the number pad at the far right of the keyboard to enter numbers. Before you can use the number pad to enter numbers, you must make sure that the number lock is on. When you depress the **Num Lock** key, which is located above the number 7 on the number pad, a small light above the **Num Lock** key is lit. This must be done each time you turn on the computer.

Exhibit 4-1. Illustration of keyboard with backspace and number keys

Navigation Keys. Navigation keys allow the interviewer to efficiently move through the interview. Navigation keys include the **Home** and **End** keys, **arrow** keys, and **Alt +** and **Ctrl +** keys.

Cursor Control Keys. The cursor is a flashing, black, vertical bar that tells you where the information you type will appear. The cursor control keys include the **Tab** and **Enter** keys. These keys are used alone or in combination with other keys to move the cursor and may be used at some point in the interview.

Function Keys. The function keys are located at the top of the keyboard. They will be described in detail as you go through the chapter.

Exhibit 4-2. Illustration of cursor control keys and navigation keys

4.2 PFU Dietary Interview Related Systems

Two software programs make up the dietary interview application—the wrapper, and Blaise for the USDA Automated Multiple Pass Method (AMPM) program and Supplement section. The AMPM is specialized software used for collecting the Dietary Recall. The “wrapper” program was designed to go around the AMPM so it would fit into the other NHANES applications.

When you are in the **wrapper** you will see a hamburger icon in the upper left corner of the screen (Exhibit 4-3). In the **PFU** interview the word “Phone Follow-Up” will appear next to it—indicating the phone follow-up interview.

Exhibit 4-3. Wrapper screen

When you are in the **AMPM program** you will see an icon in the upper left corner and the words “Blaise Data Entry” next to it—indicating the software used to create both the AMPM and Supplement programs (Exhibit 4-4).

Exhibit 4-4. AMPM screen

With the exception of a few entry screens, all of the **Dietary Recall** section of the dietary interview and the Supplement section are collected using the Blaise software. The **Post-Recall** section is collected using the wrapper program. The **status code** for each section is also collected in the wrapper.

4.2.1 Key Features of the Wrapper Program

There are a number of navigational keys you can use to move through the wrapper program. These include:

Tab – moves you from field to field

Enter – moves you from screen to screen

You may also navigate the wrapper program using VCR keys or the blue arrow shown in the screen of Exhibit 4-5.

Exhibit 4-5. VCR keys and blue arrow

The VCR keys allow you to move backward or forward in the wrapper. In the center is a rectangle that contains the page number of the current screen. Clicking on the arrow to the immediate left will move you back one page. Clicking on the arrow to the far left will move you back to the first page of the section. Likewise, clicking on the arrow immediately to the right of the number will move you to the next page, while clicking on the far right button will move you forward to the last page of the section. You can also move to the next screen by clicking on the blue arrow in the lower right hand corner of the screen.

4.2.2 Key Features of the AMPM Program

The AMPM program is the bulk of the interview. It has a number of features designed to make your life easier.

- The screens are laid out in a standardized manner.
- Each text color has a purpose.*
- The text formats have a purpose.
- Special function and navigation keys will help you move around easily in the instrument.

*The font colors in the screen shots of this manual vary as we responded to our users' preferences over the years of data collection. The current colors for the application are described and shown on page 4-9.

Screen layout. As shown in the example below (Exhibit 4-6), the screen is divided into three sections:

- **Question pane** – the cream-colored background area at the top of the screen where the questions and interviewer instructions appear.
- **Response choice pane** – the middle part of the screen where the responses are listed.
- **Answer pane** – the area at the bottom of the screen that contains the fields for recording responses.

Text features. **Black** text is used for all question text and response items. Blue text is used for interviewer instructions, which are in brackets and in upper case. Words that you need to emphasize in the questions and frequently reported responses are printed in bold type (Exhibit 4-7).

Exhibit 4-7. Text features

The screenshot shows a data entry window with a blue header bar containing 'Intake | Sorted_RFL | Navigation_Help |'. The main area has a yellow background and contains the following text: 'Terri (35, F), Yr10.s233.v1 (333) 555-7777' in black; 'Broccoli, 6:30 PM, dinner, 6:30 PM' in blue; and 'Was it regular or low sodium?' in black. At the bottom, there are three radio button options: '1. Low sodium', '2. **Regular**', and '91. Other, Specify'.

Header information. There are two types of header information: (1) Demographic Header, which includes name, age, and gender, and (2) Food Header, which includes the food name, time, and occasion (Exhibit 4-8).

Exhibit 4-8. Header information

The screenshot shows the same data entry window as Exhibit 4-7. A callout box with a black border and white background points to the first line of text, 'Terri (35, F), Yr10.s233.v1 (333) 555-7777'. The callout box contains the text 'Header information' in bold black font. The rest of the interface, including the blue header bar and the yellow background, is identical to the previous screenshot.

Function Keys. The AMPM program includes specific function keys to provide shortcuts for the interviewing process. These keys are described below.

- **F1 (Help)** – used to call up the source Help screen as shown in Exhibit 4-9.

Exhibit 4-9. F1 (Help)

- **F6 (Remark box)** – used to make a remark or comment. When you press F6 you will get this Remark box (Exhibit 4-10). The box is associated with the field your cursor is in when you press F6. So, if you need to further explain something the respondent has said, press F6 to access the Remark box and type in the information.

If you want to make a remark about a food that you have already completed, go back to the RFL, put the cursor on the food in the food list using your **mouse**, and press F6 to make your remark. If the RFL food is grayed out, you can only highlight it by clicking on the mouse as you place it over the Food Field.

Exhibit 4-10. F6 (Remark box)

- **F7 (Refusal)** – used to record a refusal to a particular question. When you press F7 the program will enter an exclamation mark (!) in the field (Exhibit 4-11) where you've put the cursor.

Exhibit 4-11. F7 (Refusal)

The screenshot shows a form with two columns of radio button options. The left column contains: 1. Bagel bites, 2. English muffin pizza, 3. French bread pizza. The right column contains: 4. Pizza, 5. Pizza bagel, 6. Pizza bites. Below the options is a grey bar with 'FIBStart' on the left and 'IncludeIntake' on the right. Under 'FIBStart' is a small input field containing the number '1'. Below this bar is a blue bar labeled 'PizzaForm' with a larger input field containing an exclamation mark '!' and a cursor. A black circle highlights the '!' in the input field.

- **F8 (DK)** – used to record a DK response. When you press F8 the program will put a question mark into the field (Exhibit 4-12) where you've put the cursor. DK is an acceptable answer.

Exhibit 4-12. F8 (DK)

The screenshot shows the same form as Exhibit 4-11. The 'FIBStart' input field contains '1'. The 'PizzaForm' input field contains a question mark '?' and a cursor. A black circle highlights the '?' in the input field.

- **F9 (access sorted RFL)** – used to access the sorted RFL. Foods that have been collected with details are sorted chronologically. This feature is very helpful during the interview because it helps you keep track of where you are. You will also refer to it when you need to document the time and occasion for a “Same as” food. Finally, you can use it to confirm whether you added or misreported a food. For example, in the screen below (Exhibit 4-13), the space between breakfast and lunch indicates a food was misreported.

Exhibit 4-13. F9 (Access sorted RFL)

The screenshot shows a software interface with two tabs at the top: "Intake" and "Sorted_RFL". The "Sorted_RFL" tab is selected. Below the tabs, the patient information "Terri (35, F), I2.001.IN.01.002 (333) 555-7777" is displayed. The main area contains a list of food items sorted chronologically, with a blank space between the breakfast and lunch entries, indicating a misreported food. The items are: "Oj, 7:00 AM, breakfast", "Macaroni and cheese, 12:30 PM, lunch", "Applesauce, 12:30 PM, lunch", "Chicken, 6:30 PM, dinner", "Ice tea, 6:30 PM, dinner", and "Broccoli, 6:30 PM, dinner". At the bottom, there is a radio button next to the text "1. CONTINUE".

- **F10 (return to RFL)** – used to return to the RFL at any point in the interview. The first time you access this screen (Exhibit 4-14) you will need to enter the letters “rfl.” After that the field will be automatically filled, and you will only need to press Enter. Use this function key when you need to add a food to the RFL or make a remark on a food that you have already collected.

Exhibit 4-14. F10 (Return to RFL)

- **F11 (Language)** – used to select the language of choice. All questions except the food probes in the Detail and Review cycle have been translated to Spanish (Exhibit 4-15). You will not use the help language selection.

Exhibit 4-15. F11 (Language)

- **Ctrl+H (HH)** – used to access a roster of HH SPs. This is important when you want to indicate the ID number of another household member who ate the same food reported by the SP. By accessing this roster (Exhibit 4-16) you can document the pertinent information.

Exhibit 4-16. Ctrl +H (HH)

The screenshot shows a window titled "HHRoster" with a file name of "HHRoster". The window contains a list of four household members, each with an ID number, name, gender, and age in years.

ID	Name	Gender	Age (years)
1	DEBBIE	Female	39
2	JEFF	Male	36
3	CAILEY	Female	2
4	NICHOLAS	Male	4

- **End** – used to take you to the next appropriate questions. It will be your primary navigation key. When you return to the RFL to enter a food, you will use the END key to get you to the place you left (Exhibit 4-17).

Exhibit 4-17. End

- **Arrow keys** – used to help you move through the instrument.
 - **Down arrow and right arrow** – move forward
 - **Down arrow** – enter foods on the RFL.
 - **Up and left arrow** – back track to a question.

- **Parallel tab** – used to access the sorted RFL. The parallel tab is at the top of the screen on the left side. You can access this tab at any time throughout the interview. To exit the parallel tab and get back to your place in the instrument, click on the Intake tab to the far left (Exhibit 4-18).

Exhibit 4-18. Parallel tab

The screenshot shows a software interface with two tabs at the top: 'Intake' and 'Sorted_RFL'. The 'Sorted_RFL' tab is active. The main area contains the following text:

Terri (35, F), I2.001.IN.01.002 (333) 555-7777

Oj, 7:00 AM, breakfast

Macaroni and cheese, 12:30 PM, lunch

Applesauce, 12:30 PM, lunch

Chicken, 6:30 PM, dinner

Ice tea, 6:30 PM, dinner

Broccoli, 6:30 PM, dinner

At the bottom, there is a radio button next to the text '1. CONTINUE'.

5. PHONE FOLLOW-UP CONTACT PROCEDURES

This chapter presents the procedures you will use to prepare for and conduct the Phone Follow-up interviews. Many of these procedures will involve using the Field Follow-up Management System (FFMS). The FFMS has been developed to support appointment scheduling, to contact SPs, and to monitor production of the Dietary Phone Follow-up interviews.

5.1 Check Daily Schedule

At the beginning of each shift you will enter the FFMS to check your schedule for the day. Click on the FFMS icon on the desktop to launch the FFMS. The first screen you will see (Exhibit 5-1) is the **FFMS Connect to nhprodweb** screen, shown below. Enter the user name and password then either press Enter or click on OK.

Exhibit 5-1. FFMS Connect to prodweb

The following screen (Exhibit 5-2) is the FFMS **Log-in** screen, shown below. Simply enter your user ID and password and either press Enter or click on the Log-in button.

Exhibit 5-2. FFMS Log-in screen

You will need to log into the FFMS about every hour.

After logging in, the system defaults to the **Dietary tab** and the **Appointment Manager** (Exhibit 5-3). The Appointment Manager module is designed to track the scheduled appointments.

7:00 AM	538714	SYLVIA MENDEZ	41yrs	English	Scheduled, Firm Appt.	Pat Soto	Rem: Not Made
8:00 AM	990954	KATARINA MENDEZ	13yrs	English	Scheduled, Firm Appt.	Pat Soto	Rem: Not Made
9:00 AM	312663	MOLLY SMITH6	4yrs	English	Scheduled, Tentative Appt.	Pat Soto	Rem: Not Made
10:00 AM	841357	ALBERTO GONZALES	52yrs	English	Scheduled, Firm Appt.	Pat Soto	Rem: Not Made

View appointment schedule. You can view the appointment schedule in a number of ways.

First, there are two filters at the top of the screen: **Interviewer** and **Appt. Status**. The Interviewer filter allows you to filter on only your own appointments while the Appt. Status filter allows you to filter on the different types of appointments. To filter on your own appointments, highlight your name in the Interviewer field in the filter criteria box. To remove the filter, hold down the control key (Ctrl) while clicking on the interviewer’s name. Use the same procedure to filter on Appt. Status. After you have decided on the filter, select the tab for the period of time you want to view: a **Day**, **Week**, or **Month**. The filters and sorting periods are shown above. Notice that when you select the “Day” tab, you must highlight the day on the calendar. If you select the “week” tab you must highlight the week on the calendar by clicking on the “>” icon to the left of each icon representing a week.

Appointment list. The appointment list (see Exhibit 5-4) is divided into eight columns that include the appointment time, the SP identification number, the SP name, the age, the language, the appointment status, the interviewer, and the reminder call status. A note icon may also appear at the end of a row of information to indicate that the MEC interviewer documented additional information about an SP. The example below is sorted by day and illustrates the appointment schedule for August 21. There is a note attached to Molly Smith6.

August 2009							Friday, August 21, 2009							
Sun	Mon	Tue	Wed	Thu	Fri	Sat								
26	27	28	29	30	31	1	7:00 AM	538714	SYLVIA MENDEZ	41yrs	English	Scheduled, Firm Appt.	Pat Soto	Rem: Not Made
2	3	4	5	6	7	8	8:00 AM	990954	KATARINA MENDEZ	13yrs	English	Scheduled, Firm Appt.	Pat Soto	Rem: Not Made
9	10	11	12	13	14	15	9:00 AM	312663	MOLLY SMITH6	4yrs	English	Scheduled, Tentative Appt.	Pat Soto	Rem: Not Made
16	17	18	19	20	21	22	10:00 AM	841357	ALBERTO GONZALES	52yrs	English	Scheduled, Firm Appt.	Pat Soto	Rem: Not Made
23	24	25	26	27	28	29								
30	31	1	2	3	4	5								

The Appointment List columns include:

- **Time** – This represents the time of the scheduled or tentative appointments. The appointment list will only show the appointment times on the day on which you filtered.
- **SP ID** – The unique six digit identification number.
- **SP name** – The name of the SP. The MEC interviewers will try to schedule family members for PFU interviews on the same day and sequential timeslots. Therefore, you will likely see multiple family members on the appointment list.
- **SP age** – The age of the SP.
- **Language** – The language used for the first dietary interview.
- **Appointment status** – This represents either the status of the appointment as assigned by the MEC interviewer when scheduling the appointment in the MEC, or the status as assigned by a telephone interviewer when attempting to conduct an interview. The status codes include:
 - **Scheduled, Firm Appointment** – SP agrees to be scheduled at a specific time. Status code is generated by the system as a result of MEC or PFU scheduling.

- **Scheduled, Tentative Appointment** – SP selected a time but may need to change appointment. Status code is generated by the system as a result of MEC or PFU scheduling.
 - **Not Scheduled, Broken Appointment** – SP was not available at scheduled time and the appointment was not rescheduled. Status code is generated only when PFU interviewer attempts the PFU interview.
 - **Appointment Completed** – Interview completed. Status code is generated only when PFU interviewer successfully conducted the interview.
 - **Appointment Final – Nonresponse** – Status code is assigned by telephone supervisor. A comment code must be entered explaining the reason for nonresponse.
- **Interviewer** – Indicates which interviewer will call the SP.
 - **Reminder calls** – Indicates whether the SP has received a reminder call about the upcoming interview. Generally, reminder calls are made the day before the interview.
 - **Note icon** – Indicates that the MEC interviewer documented additional information about the SP. Place the mouse cursor on the icon to read the note. A box will appear with the note text.

Once you have checked the daily schedule, close the FFMS.

5.2 Document Call Attempts

You must document all call attempts that you make to an SP. You can do this from the **Phone Follow-up Call Information** screen. Once you log onto the Dietary Recall interview and click on the scheduled appointment, the first screen you will see is the Phone Follow-up Call Information screen. This screen, as shown in Exhibit 5-5, contains relevant contact information about the SP, including the name, age, language, proxy interview, phone number and location, and the time and date of the scheduled interview. In addition, it lists the appointments for other household members. You will use the phone number listed to make the call. Once you reach the SP and he or she is willing to be interviewed, you can proceed to the next screen and begin the interview.

Exhibit 5-5. Phone Follow-up Call Information screen – Document attempted contacts

If you cannot conduct the interview, you will follow the steps below.

1st: Click on Call History Button. Click on the **Call History button** on the Call Information screen. This button opens the Call History module of the FFMS. The module tracks the date and time of each call and the contact code if contact was unsuccessful.

2nd: Log-In. You will need to log into the FFMS every time.

3rd: Enter Call History Module. The next screen, shown as Exhibit 5-6, is the Call History module. The screen displays the history of the calls for the SP identified on the Call Information screen and includes features that you can use to reschedule the SP.

Exhibit 5-6. Call History screen

Contact Made with SP: Yes No

Reschedule Appointment: Yes No

Contact Status:

Other, Reason:

Update Button

The features of this screen include:

- **Search Criteria bar.** Use this when you need to access information about another SP. Enter the SP ID or the first and last name in the search criteria boxes at the top of the screen.
- **Contact information.** This box provides contact information specific to the SP.
- **Contact attempt table.** This table lists the history of call attempts for the SP.
- **Update Call Info button.** This button is used to update the contact status information, after you have entered it into the FFMS (described below).
- **Contact status.** This section contains the appointment date and time. You will fill in the information and then select a contact status.

4th: Assign Contact Status. You must assign a contact status for every attempt you make to contact the SP when you could not conduct the interview. These status codes will be documented so you and other interviewers can tell what has transpired with previous call attempts to a particular SP. As shown in Exhibit 5-7, you must enter “Yes” or “No” as to whether contact was made and whether an appointment was rescheduled. If you do not reschedule the appointment, you must enter a reason from the list of contact codes in the pull-down box.

Exhibit 5-7. Contact Status codes

Attempt No.	Date/Time	Contact Made	Contact Status	Other, Reason	Rescheduled
1	9/16/2005 12:18 PM	No	Ring, no answer		
2	9/16/2005 12:25 PM	No	Answering machine, message left		

Record Call History for LISA SIMPSON (4203311) **Update Call Info**

Appointment Date/Time: 11/25/2004 8:30 AM

Contact Made with SP: Yes No

Reschedule Appointment Yes No

Contact Status:

Other, Reason:

- Ring, no answer
- Answering machine, message left
- Answering machine, no message left
- Busy
- Callback - appt. made
- Initial refusal
- Call - no appointment
- Non-working phone/disconnected
- No phone, did not call in at scheduled time
- Other
- Call Intercept/Privacy Manager

The contact codes are described below.

- **Ring, no answer** – Select this code when the telephone number rings indefinitely without a person or an answering machine response.

- **Answering machine, message left** – Select this code the first time you call an SP and reach an answering machine.
- **Answering machine, no message left** – Select this code for all other attempts on the same day to reach the SP and you get the answering machines.
- **Busy-** Select this code when you get a busy signal.
- **Initial refusal** – Select this code if the SP refuses to complete the interview at any point and does not wish to reschedule. The telephone supervisor will determine whether to conduct refusal conversion or assign a final disposition code.
- **Call no appointment** – Select this code if you make contact with the household, but the SP is not available. This code indicates that no appointment was made, but you should try again later to reach the SP.
- **Nonworking phone/disconnected** – Select this code if a number is nonworking. The supervisor will try to trace a working number.
- **No phone/did not call in at scheduled time** – Select this code when an SP is scheduled to call into the telephone center for an interview, but does not keep the appointment. The supervisor will attempt to find a way to contact the SP and reschedule.
- **Call Intercept/Privacy Manager** – Select this code when the Privacy Manager System will not allow you to leave a message.
- **Other** – If none of the above contact codes applies, select “other” and type in the reason.

5th: Update Call Information. After you enter the information, press the “**Update Call Information**” button before exiting the module. The button is highlighted in pink and located above the information you updated. The system will assign all scheduled interviews that could not be completed or rescheduled an appointment status of “Not Scheduled, Broken Appointment.”

After completing the update, Close the FFMS to return to the Call Information screen to continue. Click on Close Exam. The system will take you to the status screen for the Recall interview. It will automatically assign a status of NOT DONE. You must enter a reason for the Done code.

5.3 Retry Broken Appointments

You will access a broken appointment from the Phone Follow-up Pickup list by sorting on “Broken Appointments.” See Exhibit 5-8.

Exhibit 5-8. Phone Follow-up (PFU) Pickup list – Broken appointments

The screenshot shows a window titled "Phone Follow-Up Pickup" with three radio buttons: "Scheduled Appointment" (selected), "Needs Data Retrieval", and "Broken Appointment". Below the buttons is a table with the following data:

HH ID	Person	SP ID	Name	Age	Appointment	Spanish
1070065	4	257021	DIAMOND JOHNSON	5	4/15/2001 19:00:00	N
2500625	9	822195	KATIE SMITH	22	4/22/2001 14:00:00	N

At the bottom of the window are "OK" and "Cancel" buttons.

Highlight the SP you want to retry and click OK. You will make your call to the SP from the Phone Follow-Up Call Information screen. You will go through the same steps to document the call attempts as described above, until you reach the SP or your supervisor assigns a final status code.

5.4 Reschedule Appointments

If you need to reschedule an appointment you can do so from the Call History module (Exhibit 5-9). Follow the steps below:

1st: Select “Yes” for Contact Made and “Yes” for Reschedule. The system will then display the Appointment Manager module.

Exhibit 5-9. Call History module

'Yes' for Reschedule

2nd: Make The Appointment. When you select “Yes” for reschedule, the program launches the FFMS **Appointment Manager** screen. Follow the sequence listed below and illustrated in the screen shot as Exhibit 5-10.

- Click on calendar to select a day. There will be a warning notice if you try to schedule on the same day of the week that the in-person interview was completed.
- Filter on Spanish Interviewers, if needed.
- Review the list for the time requested by the SP and select an appointment. Notice the list contains appointment slots for all interviewers.

- Click on the “reschedule appointment” button next to the calendar. This will update the schedule and the Call History screen.

Exhibit 5-10. Appointment Manager screen – Make appointment

The screenshot shows the Appointment Manager interface. At the top, there are navigation tabs: Day, Week, Month, New Appt., Reschedule (selected), Appt. Monitor, and Not Sched. Below this is a search bar with fields for SP ID (831301), Last Name (SIMPSON), First Name (LISA), Suffix, and Stand (420), along with Search and Clear buttons. A section for current appointment details shows 'Thursday - 11/25/2004 8:30 AM' and 'Initial Exam: Monday - 11/22/2004'. Below that are fields for Phone No. (4203333333), Location (Home), Comment, and SP Will Call In (No). A calendar for September 2005 is displayed, with the 28th highlighted. An 'Appointment Filter' box is open, showing 'Spanish Interview' with a checked checkbox. A 'Reschedule Appointment' button is visible. Below the calendar is a table of appointments with columns for Slot, Date, Day of Week, Your Time, SP Time, Interviewer, Spanish, Schedule, and Tentative Schedule. The table contains three rows of appointment data.

1	9/28/2005	Wednesday	9:15 AM	9:15 AM	Fake Employee	No	<input type="checkbox"/>	<input type="checkbox"/>
1	9/28/2005	Wednesday	10:00 AM	10:00 AM	Fake Employee	No	<input type="checkbox"/>	<input type="checkbox"/>
2	9/28/2005	Wednesday	10:00 AM	10:00 AM	Janice Hall	No	<input type="checkbox"/>	<input type="checkbox"/>

3rd: Verify Appointment Rescheduled. A confirmation screen (Exhibit 5-11) will appear to verify the appointment has been rescheduled.

Exhibit 5-11. Appointment Manager screen – Verify appointment made

Then close the PFMS and complete the Recall Status in the dietary application.

5.5 Reminder Calls

Reminder calls will be made 1 to 2 days before the scheduled appointment. The telephone supervisor will schedule one person daily for the reminder calls and tell you the appointment days for which you should make the calls. You will enter the **Reminder Call** module by clicking on the module icon at the top of the screen. As shown in the screen below, Exhibit 5-12, you will click on the filter for the particular day the supervisor requests.

Exhibit 5-12. Reminder Calls module

Call Reminder Script. You will read the call reminder script that is documented on a handcard. Do not ask for the SP or proxy respondent, but read the script to whomever answers the phone. If the person you are talking with asks questions, refer them to the number listed in the script. You may leave this message on an answering machine.

Hello, my name is {interviewer Name}. I am calling for the National Health and Nutrition Examination Survey. I am calling to remind MR. /MRS. {SP/PROXY} that his/her dietary telephone interview is scheduled for (DAY, DATE) AT (TIME). Please have the bag containing the measuring guides near the phone for the interview. If you/ he/she has any questions, he/she may call 1-888-458-4762 toll free. Thank you.

6. CONDUCTING THE 24-HOUR RECALL INTERVIEW

6.1 Introduction of the PFU Dietary Interview using the USDA Automated Multiple Pass Method (AMPM) Instrument

The dietary interview is comprised of three sections: the Dietary Recall section, the Supplement and Antacid section, and the Post-Recall section. The Dietary Recall section includes the 24-hour Dietary Recall, a usual intake question, and data retrieval questions. The Post-Recall section includes observation questions that you will complete.

With the exception of a few entry screens, all of the Dietary Recall section of the interview is collected using the AMPM program in the Blaise software and the Supplements and Antacids are collected using Blaise as well. All of the Post-Recall section is collected using the wrapper program. The status code for each section is also collected in the wrapper.

The Dietary Recall Section

The **24-hour Dietary Recall** collects a list of all the foods and beverages an SP consumed within a 24-hour period; the time of consumption and the name of the eating occasion; detailed food descriptions and amounts of the reported foods; where it was obtained; and whether it was eaten at home or not. The recall is followed by a question asking about the SP's usual intake. The data will be collected using the new USDA AMPM instrument. Information collected from the 24-hour Dietary Recall will be coded and linked to a database of foods and their nutrient compositions. Calculations of total daily nutrient intakes will be derived from these data. The information obtained will be used to describe the food and nutrient intake of the population.

The Post-Recall Section

The **observation questions** document your observations about the interview. They include questions that identify language used, the main respondent, and who helped, and also ask whether there was difficulty with the interview, and if so, reasons for the difficulty.

6.1.1 Key Features of the 24-Hour Dietary Recall

The 24-hour Dietary Recall

This section is divided into five steps that collect different kinds of information about foods consumed during the 24-hour period of the previous day. The different steps encourage respondents to think about their intake in different ways and from different perspectives. This methodology is designed to maximize respondents' opportunities for remembering and reporting foods they have eaten.

There are five steps to the 24-hour Dietary Recall summarized below.

Step 1: The Quick List is the first step and is designed to get a quick report of easily remembered foods. The interviewer first defines the task for the SP:

First we'll make a list of the foods you ate and drank yesterday, (DAY). It may help you remember what you ate by thinking about where you were, who you were with, or what you were doing yesterday, like going to work, eating out, or watching television.

Please tell me everything you had to eat and drink all day yesterday, (DAY) from midnight to midnight. Include everything you had at home and away, even snacks, coffee, soft drinks, water, and alcoholic beverages. I'll ask you for specific details and amounts of the foods in a few minutes. At this time, just tell me what you had.

Step 2: The Forgotten Foods List is the second step. In this step you will encourage SPs to think about specific categories of foods that are frequently forgotten. The categories include non-alcoholic beverages, alcoholic beverages, sweets, snacks, fruits/vegetables/cheese, and breads.

Step 3: The Time and Occasion questions are the third step. They are designed to encourage additional recall and reporting by helping respondents think about their eating patterns over the past 24 hours.

Step 4: The Detail and Review Cycle is the fourth step. This step includes the following:

- a) Probes for food descriptions and food amounts (from Food Categories);
- b) A probe for the source of each food (RECSource), that is, where the food was obtained;
- c) A review of each occasion (RECReviewofEvent) to see if the SP remembers any additional foods;
- d) A probe for where each occasion was eaten (RECEventLocation); and
- e) A review of the period between occasions (RECBetweenIntervalProbe) to see if the SP remembers any additional foods.

Each food in an occasion goes through a and b and then the program cycles each occasion through c, d and e before taking you to the 5th step.

Remainder foods are probed after the last interval probe. Remainder foods are foods the SP remembers during the interview that were consumed before the time period being discussed. Remainder foods will be stored by the AMPM until the end of the Recall portion of the interview to maintain the flow of chronological order.

Step 5: The Final Review probe is the last step. This step concludes the 24-hour recall portion of the interview by asking SPs one more time if they can remember anything else they ate or drank in the previous day.

6.2 Accessing the Program

Log into the Dietary exam program by clicking on the hamburger icon on your desktop and then select “phone” on the drop-down file menu. All your scheduled appointments will be listed on the interviewer pick list as shown below (Exhibit 6-1).

Exhibit 6-1. Phone follow-up (PFU) pickup list — scheduled appointments

The screenshot shows a window titled "Phone Follow-Up Pickup" with a close button (X) in the top right corner. Below the title bar are four radio buttons: "Scheduled Appointment" (selected), "Needs Data Retrieval", "Broken Appointment", and "Needs FCBS". Below the radio buttons is a table with the following columns: "HH ID", "Person", "SP ID", "Name", "Age", "Appointment", "Spanish", and "Examined Date". The table contains one row of data: "4103867", "4", "119933", "MICHAEL PARKER", "11", "3/14/2007 07:00:00", "N", and "02/23/2007 Friday". At the bottom right of the window are "OK" and "Cancel" buttons.

HH ID	Person	SP ID	Name	Age	Appointment	Spanish	Examined Date
4103867	4	119933	MICHAEL PARKER	11	3/14/2007 07:00:00	N	02/23/2007 Friday

Highlight and click on the desired appointment to bring up the “Dietary Phone Follow-up Call Information” screen.

6.3 Introduction to Respondent

The Call Information Screen (Exhibit 6-2) has all the contact information necessary to contact the SP. Once you have reviewed the Dietary Phone Follow-up Call Information screen, you will dial the SP's telephone number. This is explained in more detail in Chapter 5.

Exhibit 6-2. Phone follow-up call information sheet — contact information

The screenshot shows the 'Dietary Phone Followup' application window. The title bar reads 'Dietary Phone Followup: Stand:107 Session:116754 01/19/2003 01:00 pm - 01:45 pm'. The main window displays the following information:

SP Information

Buttons: Call History, Contact Manager

Navigation: 1 of 5, End of Section, Close Exam, Finish

System Tray: Ready, MEC Layer: 12/23/2002 | Application: Ver 11.1.21B | Not connected to Coordinator | 04:57 PM

If you cannot conduct the interview with the respondent, click on the Call History button to document the interview attempt. This also is explained in more detail in Chapter 5. If you make contact with the SP or proxy, you will go to the next screen.

The next screen is the Phone Follow-up Introduction Script (Exhibit 6-3). Read the text to start the interview.

Exhibit 6-3. Phone follow-up introduction script

Make sure that you read the last sentence in the first paragraph, "For quality control purposes, my supervisor may listen in to this interview" verbatim. This informs the SP and provides an opportunity for him or her to decline to be observed. If, in the rare case the SP refuses to be monitored, accept the request and immediately inform the supervisor so she can block the interview from being monitored. If the SP needs to reschedule, read the text after the instructions in caps.

(IF SP NEEDS TO RESCHEDULE):

We can schedule another appointment for the interview. Is there a time that will be convenient?

You are then instructed to go to the PFMS to reschedule. Using the arrow key in the lower left corner of the screen, go back to the Call Information screen and click on the Call History to get to the PFMS.

If the SP will not reschedule, you need to attempt refusal conversion by reading the text after the instruction in caps.

(IF SP IS NOT WILLING TO RESCHEDULE):

We cannot ask everyone in the country to be in our study. You are special because you have been chosen to participate. No one else can take your place. We hope that you will help us with this interview. It will only take about 20 minutes, you will receive \$30 for participation, and it is such an important part of the health survey.

If the SP is willing to reschedule, go to the PFMS and set a new appointment.

If the SP is unwilling to continue, read the text after the instructions in caps.

(IF SP STILL SAYS NO):

Thank you for your time.

The next screen (Exhibit 6-4) asks whether the interview is a “back-to-back” interview. Back-to-back interviews are interviews completed with the same respondent, one right after the other, for example, when an SP does her own recall and then acts as the proxy for her young child. Only select “Yes” when the respondent is the same respondent from the prior interview.

Exhibit 6-4. Back-to-back interview screen

The screenshot shows a software window titled "Blaise Data Entry - C:\CSFII_NHANES\Testing\Instruments\Intake". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main area of the window is titled "Intake" and contains the following text: "Is this Intake interview being conducted 'back-to-back' with another Intake interview in this household?". Below this text are two radio button options: "1. YES" and "2. NO". At the bottom of the window, there is a status bar with the text "SPGender" followed by a text box containing the number "2" and the word "Female".

Once you answer this question, the AMPM intake instrument is launched.

The next screen you will see is about the measuring guides that the respondent was given after the in-person interview in the MEC (Exhibit 6-5).

Select “1” if the SP will use the measuring guides and Food Model Booklet, select “2” if the SP will use his or her own guides, and select “3” if the SP does not have any guides. After selecting the appropriate guide response, continue on to the Quick List.

Exhibit 6-5. Have food model guides screen

The screenshot shows a window titled "Blaise Data Entry - C:\NHANES05\Intake\Instruments\Intake". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with icons for file operations and navigation. The main area is divided into sections. The top section is a large yellow box with the question "[DOES THE RESPONDENT HAVE THE GUIDES?]" in blue text. Below this is a list of three radio button options: "1. SP HAS STUDY MEASURING GUIDES", "2. SP HAS OWN GUIDES", and "3. SP DOES NOT HAVE ANY GUIDES". The bottom section contains a list of variables with input fields: "SPPhoneArea", "SPPhoneExch", "SPPhoneLocl", "BackToBackInterview" (with a value of "2" and the text "No" next to it), and "INTRHaveGuides". The Windows taskbar at the bottom shows the Start button, several open applications including "Inbox - Microsoft Ou...", "05 refresher", and "NHANES05", and the system tray with the time "4:53 PM".

6.4 Step 1: The Quick List Pass (QL)

The Quick List (QL) pass is the first step of the instrument. It introduces the SP to the concept of the 24-hour Dietary Recall and collects all the foods they remember eating.

The screen asks the respondent to recall all of the foods and beverages they ate and drank the day before the interview (Exhibit 6-6). You must read the statement verbatim. Press “1” and ENTER to continue with the rest of the QL Introduction.

Exhibit 6-6. Recall foods and beverages screen

Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE

Forms Answer Navigate Options Help

Intake

Sample (28, F), E1.001.IN.18.001 (301) 555-1212

First, we'll make a list of the foods you ate and drank yesterday, Monday. It may help you remember what you ate by thinking about where you were, who you were with, or what you were doing, like working, eating out, or watching television.

1. CONTINUE

RECQuickListOverview

You will record all the Quick List foods on the next screen called the Respondent Food List (RFL) screen (Exhibit 6-7). Read the statement at the top and enter the food information in the FoodName column.

If reported, you may also enter any helpful comments (if time permits), times, and occasions that the respondent reports. You will return to this screen later to collect the times and occasions for every food reported at the QL pass.

Exhibit 6-7. RFL screen

	Food Name	Comment	Time	Occasion	Occasion, OS
Food[1]	<input type="text"/>				
Food[2]					
Food[3]					
Food[4]					
Food[5]					
Food[6]					
Food[7]					
Food[8]					
Food[9]					

Statement. Read the statement exactly as it is written on the screen. The SP must understand that you are interested in everything they ate or drank during the 24 hours of the previous day, from midnight to midnight. If the SP does not understand the timeframe, re-explain, guiding the SP to Tab 1 of their Food Model Booklet titled “**Yesterday’s Food Intake. . . Midnight to Midnight**” (Exhibit 6-8). For example, for an interview on Thursday, you might say, “We’ll be talking about the period from 12 midnight, Wednesday night, all day yesterday, until 12 midnight, last night.” The exact time period is from 12:00 midnight to 11:59 PM.

Exhibit 6-8. Yesterday's food intake card

Emphasize that the respondent is to tell you **everything they ate or drank** including snacks and food they ate or drank at home or away from home. You do not need to collect information about vitamins and mineral supplements in a pill or liquid form. **Do not interrupt or probe** while the respondent is listing the foods on the QL pass. However, if you cannot understand the respondent or if they report their foods too fast for you to enter them, you may ask them to repeat or clarify what they've said.

Column 1. FoodName Column. Notice that the cursor is in a blank field in the FoodName column which is the first column of the RFL. Foods reported by respondents are entered in this column (Exhibit 6-9).

Exhibit 6-9. FoodName column

The screenshot shows a software window titled "Blaise Data Entry - C:\NHANES05\Intake\Instruments\Intake". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main area of the window is divided into two sections. The top section is a yellow background containing text: "Janice (23, F), I5.001.IN.01.007" and a paragraph of instructions: "Please tell me everything you had to eat and drink all day yesterday, Sunday, from midnight to midnight. Include everything you had at home and away, even snacks, coffee, soft drinks, water and alcoholic beverages. I'll ask you for specific details and amounts of the foods in a few minutes. **At this time**, just tell me **what** you had." Below the instructions is a blue box with the text: "[ENTER THE NAME OF EACH FOOD ON A SEPARATE LINE. USE COMMENT, TIME, AND/OR OCCASION FIELDS ONLY IF SP PROVIDES DETAILS.]". The bottom section is a table with the following columns: "Food Name", "Comment", "Time", "Occasion", and "Occasion, OS". The table has rows labeled "Food[1]" through "Food[9]". The "Food Name" column for "Food[1]" is currently empty and has a cursor in it.

	Food Name	Comment	Time	Occasion	Occasion, OS
Food[1]					
Food[2]					
Food[3]					
Food[4]					
Food[5]					
Food[6]					
Food[7]					
Food[8]					
Food[9]					

As you begin to type a food name, you will access the Main Food List (MFL). The MFL is a list of over 2,600 foods that you will use any time you enter foods on the RFL (Exhibit 6-10). (See Section 6.4.1 for details on the MFL).

In most cases, you must enter at least three letters of a food name to access the MFL. In general, the more letters entered, the greater the likelihood of a match. However, certain two-letter abbreviations will access frequently reported foods (see Section 6.4.1 for details on MFL search strategies).

Exhibit 6-10. Trigram search

If the highlighted food is not a match, use the DOWN ARROW key to scroll down the list and select the food that is the best match for what the respondent reported. Once the food is highlighted, press the ENTER key to select the highlighted food. The food will be placed in the RFL FoodName field (Exhibit 6-11).

To get to the next available FoodName field, use the DOWN ARROW key. If the respondent changes a reported food or if you have selected an incorrect food, use the UP ARROW key to go back to the original food line and enter the change or enter "Error" to delete it.

Exhibit 6-11. RFL screen — columns 2-4

	Food Name	Comment	Time	Occasion	Occasion, OS
Food[1]	Toast				
Food[2]					
Food[3]					
Food[4]					
Food[5]					
Food[6]					
Food[7]					
Food[8]					
Food[9]					

Column 2. Comment Field. The Comment field is for your use only. You can enter any information the SP reports about a food that will be helpful later. For example, if the SP reports “rice with gravy,” enter “rice” in the Quick List and “gravy” in comments.

Columns 3 & 4. Time and Occasion Fields. Respondents may report an eating time and/or occasion as they remember what they ate. You may enter this information in either the comments field or the time and occasion fields. Press the ENTER key to go across the screen to the appropriate field. Do **not ask** for the times or eating occasions of any foods while on the Quick List pass. Procedures for entering the Time and Occasion are discussed in more detail in Section 6.6.

As you move through the QL Pass, try not to interrupt SPs while they report their foods, but use the information provided to help you select the best choice from the Main Food List. You may ask respondents to restate or clarify a food if you do not understand them.

Your goal during the QL Pass is to let respondents report everything they ate or drank. If respondents seem unable to recall what they ate in the 24-hour period (or for a particular eating occasion), use a prompt. For example, you can say something like, “Perhaps it will help you to think about where you were on Wednesday” or “Perhaps it will help if you think about what you were doing at that time.” Be careful, however, not to use probes that suggest specific meals or foods such as, “What did you have for breakfast?” or “Do you usually have orange juice first?”

It is crucial that respondents really understand what is being asked. Explain the procedure carefully and let the respondents know that you will be patient while they try to recall the information.

6.4.1 The Main Food List (MFL)

The Main Food List (MFL) is a list of more than 2,600 foods from which you will select foods eaten by the SP during the previous 24 hours. The MFL links the food to the appropriate category of probes needed. The MFL lists foods in the ways respondents will likely report them. The goal when searching the MFL is to find a food quickly and, if possible, get a “direct hit.” A direct hit occurs when the letters you enter bring up the food you want.

The USDA AMPM program searches for foods on the MFL through a mechanism called “Trigram searching.” “Trigram searching” operates basically as a word-matching process initiated after you type in all or part of a food name. The combination of letters you type in is called a “search term.” After a search term has been entered, the trigram search mechanism finds all foods that have three-letter combinations of the search term. For example, if you type in the word “French fries” the trigram will search for the following three-lettered combinations: FRE, REN, ENC, NCH, CH_, H_F, _FR, FRI, RIE, and IES. The program will display all foods that have this combination of letters.

As shown below (Exhibit 6-12), typing in only part of the word “French fries” (Fren fri) brought up “French fries” at the top of the list (a direct hit). The search also brought up all foods containing the three-lettered combinations of the word “Fren Fri” including foods not associated with French fries such as “Chicken fricassee.”

Exhibit 6-12. Main Food List (MFL)

FoodName	FIBCategory	PrecodeVarA	PrecodeVarB
French fries	080030	6	
Chicken fricassee	100010	Fricassee, chicken	
Arbys french fries	080030	6	1
Chicken fried rice	100050	Fried rice, chicken	
Chicken fried steak	090010	Chicken fried steak	
School french fries	080030	6	4
Wendys french fries	080030	6	1
Fast food french fries	080030	6	1
McDonalds french fries	080030	6	1
Burger King french fries	080030	6	1
Din fries	080030	5	
French roll	030020	4	French roll
French bread	030010	French bread	
French toast	030110		
Fried chicken	090080	1	
Chicken frz din	110030		
French dressing	160030	French dressing	
French onion dip	150030	17	
French onion soup	130030	French onion soup	

Search: fren fri

Key type: IriagramFood AlphaFood

1:24

Select Cancel

As illustrated above, the trigram uses spaces and characters in the word(s) you have typed to search. Typing fewer letters or two words with no space will bring up a different combination of letters. For example, typing “Fre fri” brings up “home fries.” Typing “toa” brings up “Texas toast,” but typing “toast” brings up “toast.” As you become more familiar with the MFL, you will learn which strategies are best for you when searching for foods on the MFL.

Strategies for searching. There are a number of strategies you can use to quickly and accurately find the correct food on the MFL. These include:

- Entering words or partial words that **uniquely identify** a food (e.g., “wat add” for “water as an addition”; “cof” for “coffee”). See table on next page.
- Learning efficient search terms for the most **frequently reported foods** (e.g., “1 milk” for “1% milk,” “toa” for “toast,” and “grapef ju” for “grapefruit juice”);
- Entering **generic food names** (e.g., “soda” instead of “caffeine-free soda”, “Happy meal” instead of “McDonalds Happy Meal”), when you know that level of detail is not on the MFL;
- Entering **food and brand name abbreviations** (e.g., “oj” for “orange juice,” “pbj” for “peanut butter and jelly sandwich”);
- Entering **eating occasions and places** (e.g., “appetizers,” “school lunch,” and “Chinese food”) if the respondent does not give you specific foods on the QL; and
- Entering **place holders** for unknown foods and situations when the SP was fasting.

These strategies are discussed below:

Unique Identifiers for Frequently Reported Foods - Becoming familiar with the most frequently reported foods will save you time when entering foods into the RFL. Following is a list of foods that were reported most frequently in USDA’s Continuing Survey of Food Intakes by Individuals (CSFII) conducted in 1994-96, along with their appropriate search term (Exhibit 6-13).

Exhibit 6-13. Table of unique identifiers on MFL

Ham	ham		
Hamburger	hamb		

Generic Food Names. The MFL contains a number of generic foods such as “milk,” “bread,” and “soda” that you can use to get a “direct hit” if you are unsure whether the reported food is on the MFL. For example, if a respondent reports anadama bread and you are unsure how to enter the food name, you may enter “bread” and write “anadama” in the comments field. Following is a list of the generic foods in the MFL (Exhibit 6-14).

Exhibit 6-14. Generic food names

Generic Foods	
Alcoholic drink	Fast food sandwich
Alcoholic mixed drink	Fish
Appetizer	Flavored drink
Baby formula	Formula
Bread	Frozen breakfast
Breakfast bar	Fruit
Cake	Hamburger
Candy	Happy meal
Casserole	Hot Cereal
Cereal	Ice cream
Cereal bar	Juice
Cheese	Kids meal
Chicken	Liquor
Chinese food	Meal replacement bar
Chips	Meal replacement drink
Coffee	Meal replacement powder
Cookie	Meat
Crackers	Mexican food
Cream	Milk
Curry	Milkshake
Dessert	Mixed drink
Dip	Nonalcoholic drink
Drink	Nuts
Dumpling	Oil
Egg	Pasta
Fast food biscuit	Pastry

Exhibit 6-14. Generic food names (continued)

Generic Foods	
Pie	Smoothie
Pizza	Snack
Pop	Soda
Poultry	Soft drink
Powdered breakfast drink	Soup
Protein powder	Spaghetti
Protein supplement drink	Spread
Pudding	Stew
Punch	Stir fry
Rice	Sugar substitute
Salad	Sushi
Salad bar	Syrup
Salad dressing	Tea
Sandwich	Tempura
Sauce	Vegetables
Seafood	Water
Seeds	Wine
Shake	Yogurt

Abbreviations. Abbreviations are used throughout the MFL and can be classified into 4 categories:

- **Food Names** such as “oj” for Orange juice;
- **Forms** of food such as “bbq” for Barbeque;
- **Brand names** such as “KFC” for Kentucky Fried Chicken and “TCBY” for The Country’s Best Yogurt; and
- **Descriptive terms** such as “w” for with; and
- **Other** helpful abbreviations such as “w” for with.

The table below (Exhibit 6-15) contains a complete list of abbreviations. It is essential that you learn these abbreviations to ensure you match the reported foods with a food on the MFL. Keep in mind that these abbreviations are used everywhere possible. For example, the abbreviation “bbq” is used when an SP reports eating “barbeque” and also when an SP reports eating “bbq ribs” (barbecued ribs). Note that when searching for a food, you may enter either upper case or lower case. Upper case is used in the MFL to provide you with visual cues on the screen.

Exhibit 6-15. Table of abbreviations on MFL

MFL Abbreviation	MFL Food
1 milk	1% milk
2 milk	2% milk
Bbq	Barbecue
BLT	Bacon, lettuce, and tomato sandwich
Din	Dinner
KFC	Kentucky Fried Chicken
lite	Light
Lf	Low fat
Oj	Orange juice
PB	Peanut butter sandwich
pbj sandwich	Peanut butter and jelly sandwich
TCBY	The Country’s Best Yogurt
W	With

Ethnic Foods – There are many ethnic foods on the MFL, particularly Mexican and Chinese foods. The foods are listed below (Exhibits 6-16 and 6-17). You should familiarize yourself with these lists so that you can enter the ethnic food as it is reported. However, generic names of foods are also available.

Exhibit 6-16. Table of Mexican foods on MFL

Mexican Foods	
Asopao de gandules	Pozole soup
Bean burrito	Mexican rice
Bean enchilada	Sopa seca dry noodle soup
Beef and bean burrito	Minestrone soup
Beef burrito	Mondongo soup
Beef enchilada	Pupusa
Beef fajita	Quesadilla
Beef flauta	Soft taco
Beef taco	Sopa Seca de Fideo
Beef tostada	Sopa caldo de Res
Breakfast burrito	Sopa caldo de pollo
Burrito	Sopa de Albondigas
Chalupa	Sopa de Fideo Aguada
Cheese burrito	Sopa de ajo
Cheese enchilada	Sopa de carne y fideos
Cheese quesadilla	Sopa de pescado
Chicken burrito	Sopa de platano
Chicken enchilada	Sopa de pollo con arroz
Chicken fajita	Sopa de tortilla
Chicken flauta	Sopa ranchera
Chicken taco	Sopa seca de arroz
Chicken tostada	Sopes
Chilaquile	Steak fajita
Chimichanga	Taco
Enchilada	Tamale
Fajita	Taquito
Flauta	Tostada
Gordita	Vegetable fajita
Menudo soup	

Exhibit 6-17. Table of Chinese foods on MFL

Chinese Food	
Almond chicken Chinese	Moo shi
Beef and broccoli Chinese	Moo shi pork
Beef fried rice	Nissin noodle soup
Beef lo mein	Orange beef Chinese
Beef w vegetables Chinese	Orange chicken Chinese
Cashew chicken	Pad thai noodles
Chicken chow mein	Pepper steak
Chicken fried rice	Pork fried rice
Chicken lo mein	Pork lo mein
Chicken teriyaki	Pork w vegetables Chinese
Chicken w broccoli Chinese	Pot sticker
Chicken w vegetables Chinese	Sesame beef
Chinese rice	Sesame chicken
Chinese string beans	Sesame pork
Chop suey	Shrimp fried rice
Chow mein	Shrimp lo mein
Crab Rangoon	Shrimp teriyaki
Dim sum	Shrimp toast
Double cooked pork	Shrimp w lobster sauce
Egg drop soup Chinese	Shrimp w vegetables Chinese
Egg foo young	Spring roll
Egg roll	Steak teriyaki
Fried rice	Stir fry
Garden roll	Summer roll
Garlic chicken Chinese	Sweet and sour beef
General Tso's	Sweet and sour chicken
General Tso's chicken	Sweet and sour pork
Hot and sour soup Chinese	Sweet and sour shrimp
Hunan beef	Szechuan beef
Hunan chicken	Szechuan chicken
Hunan pork	Szechuan pork
Hunan shrimp	Szechuan shrimp
Kung Pao	Tofu w vegetables
Kung Pao chicken	Vegetable fried rice
Lemon chicken Chinese	Vegetarian egg roll
Lo mein	Vegetable lo mein
Lumpia	Wonton
Miso soup	Wonton soup
Moo goo gai pan	

The MFL also includes a number of other ethnic foods such as Indian and Vietnamese foods. If you cannot find the food the respondent reports on the MFL, you can enter the ethnicity, such as “Indian,” “Chinese,” and “Mexican” and get a list of many of the foods common to those countries. If the food you are looking for does not come up right away, enter the generic version of the food (e.g., “soup,” “appetizer,” “beverage,” “casserole,” “vegetable”). If you do not know the generic version, enter the term “unknown food.” (See below in Exhibit 6-18.)

Occasions/Places. Popular eating occasions and places are listed on the MFL. If the respondent reports “appetizers” or a “fish fry” you may enter these terms on the Quick List and then ask about the specific foods when you collect the food details for that occasion.

Exhibit 6-18. Table of occasions, places, and generic foods on MFL

Occasions/Places/Generic Foods on the MFL	
Appetizers	Hors d’oeuvres
Breakfast	Kid’s meal
Buffet	Lunch
Chinese food	Mexican food
Church supper	Salad bar
Dessert	School breakfast
Dinner	School lunch
Drink	Snack
Fasting	Spread
Fish fry	Unknown food
Happy meal	Unknown meal

Unknown Foods/Fasting. When a respondent reports a food that is not on the MFL or is unfamiliar to you or to the respondent, and therefore difficult to fit into a generic food, you can select the term “Unknown food” from the MFL and make a note in the comment field. Later in the interview the AMPM will bring up probes to help you identify the food and enter the descriptive information. Do not ask the respondent to describe the food at the QL pass.

The MFL contains the term “fasting.” If SPs report that they fasted on the recall day, enter “Fasting” on the QL. Procedures for completing an interview for a fasting SP are discussed in Chapter 8. A copy of the MFL can be found in Appendix A.

6.4.2 Leaving the Quick List (QL) Pass

There are several steps you must follow before leaving the QL pass. First, once you have listed all the foods the respondent remembers, ask the “Anything Else?” probe. If the respondent reports any foods, list them on the next available line on the RFL. While collecting the Quick List, you can remove mistakenly reported foods by typing “error” over the food name on the list or type over the incorrect food. Finally, on the last available line on the QL, type “XXX” and press ENTER twice to go to the next screen (Exhibit 6-19).

Exhibit 6-19. Leaving the QL pass

Intake | Navigation_Help

23 (4M). 17.001.IN.01.008

[ENTER THE NAME OF EACH FOOD ON A SEPARATE LINE. USE COMMENT, TIME, AND/OR OCCASION FIELDS ONLY IF [X] PROVIDES DETAILS.]

	Food Name	Comments for Interviewer's Use	Time	Occasion	Occasion, OS
Food[1]	0j				
Food[2]	McDonalds Big Mac				
Food[3]	McDonalds french fries				
Food[4]	Chocolate milkshake				
Food[5]	Hunan chicken				
Food[6]	Fried rice				
Food[7]	Fortune cookie				
Food[8]	Green tea				
Food[9]	XXX				

A maximum of 40 foods can be entered on the RFL. If more foods are reported, you will record them in the Remark Box (F6 function key). See Chapter 8 for details on recording 40+ foods.

6.5 Step 2: The Forgotten Foods List (FFL)

The Forgotten Foods List (FFL) is Step 2 of the instrument (Exhibit 6-20). It is comprised of seven probes: six of the probes ask about specific food groups and the seventh asks if the respondent remembers any other foods for the recalled day:

- **Beverages:** Coffee, tea, soft drinks, milk, or juice
- **Other Drinks:** Beer, wine, cocktails, or other drinks
- **Sweets:** Cookies, candy, ice cream, or other sweets
- **Snacks:** Chips, crackers, popcorn, pretzels, nuts, or other snack foods
- **Fruits, Vegetables, Cheese:** Fruits, vegetables, or cheese
- **Breads:** Breads, rolls, or tortillas
- **Anything else**

RECFFLDtherDrk	
RECFFLSweets	
RECFFLSnacks	
RECFFLFruitVegCheese	

Start | Inbox - Microsoft Outlook | Blaise Data Entry | K:\CMGRP\NHANES Diet... | 3:39 PM

For each group of foods, type “1” (Yes), “2” (No), or “3” (Had other food(s)). If you enter “1” for Yes, the AMPM will take you back to the RFL to enter the remembered food(s). If you enter “2” for No, the AMPM will take you to the question about the next group of FFL foods. You will enter “3” when the respondent remembers a food that does not belong in the group of foods for which you are probing. For example, if a respondent remembers eating bread when you are asking about remembered sweets, do not wait to enter the remembered bread at the Bread probe. Type “3” and the AMPM will take you back to the RFL to enter the food.

Exhibit 6-21. FFL — Code all that apply (CATA) responses

The screenshot shows the Blaise Data Entry software interface. The title bar reads "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". The toolbar contains icons for file operations and help. The main window displays the following content:

Intake | Sorted_RFL |

Sample [23, F], E1.001.IN.18.001 (301) 555-1212

Beer, wine, cocktails or other drinks?

[READ IF NEEDED: In addition to the foods you have already told me about, did you have any beer, wine, cocktails or other drinks?]

1. YES
 2. NO
 3. HAD OTHER FOOD(S)

Label	Forgotten Foods	Label	Measuring Guides
RECFFLIntroBeverage	2	RECIInstructMeasGuides	<input type="checkbox"/>
RECFFLOtherDrk	1-3	RECIInstructOwnGuides	
RECFFLSweets		RECIInstructNoGuides	
RECFFLSnacks		RECMidntToFirstOcc	

Notice that on the screen (Exhibit 6-21), there are boxes to the left of the response items. This indicates that you may choose more than one answer. There may be times a respondent remembers more than one food at an FFL probe and the foods may be associated with different FFL probes. For example, if the respondent at the Beverage category probe remembers drinking one soda and eating some potato chips, you will select both “1” for the soda and “3” for the potato chips. You can select both

answers by using the mouse to click on the boxes or by inserting a space (or dash) between 1 and 3 (1 3; 1-3).

Questions such as this one, where the respondent can give more than one answer, are called Code All That Apply (CATA) questions. The boxes next to the response items distinguish these questions as CATA questions. One-answer questions have circles next to the response options. CATA questions can also be displayed in three other ways. They will be discussed in more detail later in this chapter.

Even though this is a CATA question, not all answers can be combined. An answer cannot be both “1 and 2” (Yes and No). If you accidentally recorded “1-2,” you will see the Edit Message below (Exhibit 6-22) and will need to correct your entry.

Exhibit 6-22. FFL — Edit messages for impossible answers

You will see Edit Messages throughout the AMPM Instrument. This particular message lets you know that the response items entered (Yes and No) are an impossible combination. As shown, a Hard Edit Message appears telling you that the response entered is invalid. It is called a “Hard” edit because entry of an impossible combination of responses is not permitted by the AMPM. When a Hard Edit Message comes up on the screen, you must re-enter the responses in order to continue with the interview. If you press ENTER when this message appears, the program will take you back to the question that needs to be changed. Edits are discussed in more detail later in this chapter.

When the SP remembers a food at one or more of the FFL probes, the program will take you back to the RFL to add the food(s). To leave the RFL screen, type “XXX” on the next available RFL line (Exhibit 6-23). Press ENTER twice and END to navigate to the next appropriate question. The steps are summarized below.

Exhibit 6-23. Type XXX to leave RFL

- (1) **Enter** food on RFL;
- (2) Ask “Anything Else?” probe (and enter new foods on the RFL);
- (3) Type “XXX” and press ENTER twice;
- (4) Press END.

Make sure the respondent understands that you are asking about foods **in addition** to the ones reported on the Quick List (Exhibit 6-24). Do not record duplicate foods. When you have finished reading the entire Forgotten Foods List, and recorded all remembered foods, the AMPM instrument will guide you to Step 3, the Time and Occasion Pass.

Exhibit 6-24. FFL — Anything else question

The screenshot shows a software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main content area is divided into sections. The top section shows "Intake | Sorted_RFL" and "Sample (23, F), E1.001.IN.18.001 (301) 555-1212". The question text is "Anything else?" followed by "[READ IF NEEDED: In addition to the foods you have already told me about, did you have anything else?]". Below the question are two radio button options: "1. YES" and "2. NO". At the bottom of the window is a data entry grid with the following fields:

RECFFLsweets	2	RECFFLsnacks	2	RECInstructNoGuides	
RECFFLFruitVegCheese	2	RECFLBread	2	RECMidntToFirstOcc	
RECFFLAnythingElse					

After the last probe of the FFL, “Anything Else,” you will see an Edit screen (Exhibit 6-25) asking you to enter the time for the first reported food.

Exhibit 6-25. Edit screen to go to time and occasion pass

The screenshot shows a window titled "Hard Error" with a blue header bar. Below the header, the text "PLEASE CONFIRM OR COLLECT TIME AND OCCASION FOR ALL FOODS." is displayed in blue. A table with two columns, "Questions involved" and "Value", is shown. The table has a header row and three data rows. The first data row is highlighted in blue and contains "(RECO30)". The second data row contains "(RFL)" and "Bagel". The third data row contains "(RFL)" and "XXX". At the bottom of the window, there are three buttons: "Suppress", "Close", and "Goto".

Questions involved	Value
(RECO30)	
(RFL)	Bagel
(RFL)	XXX

You may press ENTER or use the mouse to activate the Goto button to go to Step 3 in the interview to collect the Time and Occasion for all foods on the RFL.

6.6 Step 3: The Time and Occasion Pass (T/O)

The Time and Occasion pass is Step 3 of the AMPM (Exhibit 6-26). It asks the respondent times and eating occasions for each of the food items recorded in the RFL. The cursor will appear on the first blank time or occasion field. Time and Occasion are asked for each food in the order that the respondent reported the foods on the Quick List (QL) pass. If you recorded time and/or occasion for any foods during the QL, you can confirm the information as you go through the list of foods. You do not have to ask the time and/or occasion again. Also, when you confirm a time, use terms such as “in the morning,” “in the afternoon,” or “in the evening” rather than always asking “Was that AM or PM?” For example, you may say, “You said you had your toast at 7 in the morning, is that correct?” Press the ENTER key to move across the screen to the Occasion field.

Exhibit 6-26. Time question on RFL

Blaise 4.7 Data Entry - Wrk29\vol2905\nhctest\2007\Testing\Julie\Instruments\Intake

Forms Answer Navigate Options Help

Intake Sorted_RFL Navigation_Help

123 (25, M) 17.001.JN.01.009

About what time did you **begin** to eat/drink the Toast?

[ENTER HOUR, MINUTE AND AM OR PM]

[IF SP IS NOT SURE OF TIME, ASK FOR BEST ESTIMATE. IF SP IS UNABLE TO ESTIMATE TIME, REFER TO HANDCARD]

	Food Name	Comments for Interviewer's Use	Time	Occasion	Occasion, OS
Food[1]	Toast	cream cheese			
Food[2]	Oj				
Food[3]	McDonalds Big Mac				
Food[4]	McDonalds french fries				
Food[5]	McDonalds milkshake				
Food[6]	Beer				
Food[7]	Margarita				
Food[8]	Tortilla chips	salsa			

As shown in the above example, the cursor will be in the first time field. For this case it is in the Time field for toast.

In rare instances the respondent may report all of the time and occasion information during the QL or FFL. If this occurs, the AMPM will move the time for the first food on the RFL to the comments field (Comments) and the cursor will be in the Time field. You must reenter the time for the first food to continue with the interview. Then confirm the occasion for the first food and the time and occasion for the other foods on the QL.

The Time Question asks the respondent about what time she began to eat/drink the food (Exhibit 6-27). Type “a” or “p” for AM or PM. If you do not enter “a” or “p” then the AMPM program will default all times to AM. If the respondent reports in a whole hour, such as “6:00” you can enter “6.” If the respondent reports in hour and minutes you need not enter a colon (except for the 12 o’clock hour).

Exhibit 6-27. Enter time on RFL

The screenshot shows the Blaise 4.7 Data Entry software interface. The window title is "Blaise 4.7 Data Entry - Wrk29\vol2905\mhcstest\2007\Testing\Julie\Instruments\Intake". The menu bar includes "File", "Answer", "Navigate", "Options", and "Help". The toolbar contains various icons for navigation and editing. The main display area shows the question: "About what time did you **begin** to eat/drink the Toast?" with instructions: "[ENTER HOUR, MINUTE AND AM OR PM]" and "[IF SP IS NOT SURE OF TIME, ASK FOR BEST ESTIMATE. IF SP IS UNABLE TO ESTIMATE TIME, REFER TO HANDCARD]". Below the question is a table for recording food intake.

	Food Name	Comments for Interviewer's Use	Time	Occasion	Occasion, OS
Food[1]	Toast	cream cheese	6	<input type="checkbox"/>	
Food[2]	Oj			<input type="checkbox"/>	
Food[3]	McDonalds Big Mac			<input type="checkbox"/>	
Food[4]	McDonalds french fries			<input type="checkbox"/>	
Food[5]	McDonalds milkshake			<input type="checkbox"/>	
Food[6]	Beer			<input type="checkbox"/>	
Food[7]	Margarita			<input type="checkbox"/>	
Food[8]	Tortilla chips	salsa		<input type="checkbox"/>	

As shown in the example below (Exhibit 6-28), the interviewer entered “6” in the time field and the program displayed 6:00AM as the default.

Exhibit 6-28. Time defaults to AM

123 (25, M), Yr10.s233.v1

On this card is a list of meals. What would you call this eating occasion? (Was it your breakfast, lunch, dinner, snack, or something else?)

- 1. Breakfast
- 2. Lunch
- 3. Dinner
- 4. Supper
- 5. Brunch
- 6. Snack
- 7. Beverage/Drink
- 8. Feeding-infant only
- 9. Extended consumption
- 10. Desayuno
- 11. Almuerzo
- 12. Comida
- 13. Merienda
- 14. Cena
- 15. Entre comidas
- 16. Botana
- 17. Bocado
- 18. Tentempie
- 19. Bebida
- 91. Other, Specify

	Food Name	Comments for Interviewer's Use	Time	Occasion	Occasion, OS
Food[1]	Toast	cream cheese	6:00AM	<input type="checkbox"/>	
Food[2]	Oj			<input type="checkbox"/>	
Food[3]	McDonalds Big Mac			<input type="checkbox"/>	
Food[4]	McDonalds french fries			<input type="checkbox"/>	
Food[5]	McDonalds milkshake			<input type="checkbox"/>	
Food[6]	Beer			<input type="checkbox"/>	
Food[7]	Margarita			<input type="checkbox"/>	
Food[8]	Tortilla chips	salsa		<input type="checkbox"/>	

In this example, the interviewer typed “1” and “p” to enter “1:00PM.”

Exhibit 6-29. Enter “PM”

If respondents report different meals at the same time, you will see a hard edit, as shown below (Exhibit 6-30). You will read the text, which informs the respondent of the discrepancy and asks whether the time or the occasion should be changed. You will also see an edit if you enter the same occasion 12 hours apart. For example, if you enter breakfast at 7 AM and breakfast at 7 PM, the program will alert you to make sure your entry is correct.

Exhibit 6-30. Hard edit when entering different meals at same time

If respondents don't know the exact time the eating occasion began, you must probe for an approximate time. If they cannot provide an approximate time, you will enter a default time for the occasion reported (Exhibit 6-31). As a reference, you will be provided a handcard containing a list of the default times for each reported occasion. Do not state the time during the Details pass, but say the occasion.

Exhibit 6-31. Default times when SP doesn't know the time

Default Times	
Breakfast	8:00AM
Morning Snack	10:00AM
Lunch	12:00PM
Afternoon Snack	3:00PM
Dinner	6:00PM
Evening Snack	9:00PM

The Occasion Question asks the respondent to name the eating occasion at which each food was eaten or drunk. As stated in the interviewer instructions on the screen, make sure you refer the respondent to the yellow page in the Food Model Booklet. Have the SP pick an occasion from the **Eating Occasions** list. If an SP seems uncertain about how to classify a one-food occasion such as a soda or a bag of pretzels, you can suggest a "Drink" or a "Snack." Do not assume that breakfast is the first meal of the day, lunch is second, and so on.

The response items for an eating occasion are listed on the screen below (Exhibit 6-32).

Exhibit 6-32. Eating occasion question on RFL

The screenshot shows the Blaise 4.7 Data Entry software interface. The window title is "Blaise 4.7 Data Entry - C:\isis\Intake08\Intake". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". The toolbar contains various icons for navigation and editing. The main window displays the following information:

Pat (23, F.) Yr10.s233.v1

On this card is a list of meals. What would you call this eating occasion? (Was it your breakfast, lunch, dinner, snack, or something else?)

The response options are:

- 1. Breakfast
- 2. Lunch
- 3. Dinner
- 4. Supper
- 5. Brunch
- 6. Snack
- 7. Beverage/Drink
- 8. Feeding-infant only
- 9. Extended consumption
- 10. Desayuno
- 11. Almuerzo
- 12. Comida
- 13. Merienda
- 14. Cena
- 15. Entre comidas
- 16. Botana
- 17. Bocadoillo
- 18. Tentempie
- 19. Bebida
- 91. Other, Specify

Below the options is a table with the following columns: Food Name, Comments for Interviewer's Use, Time, Occasion, and Occasion, OS.

	Food Name	Comments for Interviewer's Use	Time	Occasion	Occasion, OS
Food[1]	Coffee		7:00AM		
Food[2]	XXX				
Food[3]					
Food[4]					
Food[5]					
Food[6]					
Food[7]					
Food[8]					
Food[9]					

If the respondent reported the eating occasion while completing either the QL or the FFL pass, confirm the occasion you have already recorded in the Occasion column on the RFL screen.

Most of the occasions are self-explanatory; however, a few need further explanation.

- **Feeding-infant only** – This occasion should only be chosen for children under 2 years of age. Procedures for collecting information on infants are discussed in more detail in Chapter 8.
- **Extended consumption** – This occasion should only be chosen when an eating activity is virtually continuous without distinct periods of consumption, such as sipping cups of coffee from an 8-cup pot or drinking soda from a 2-liter bottle throughout the day. Use this code very sparingly. SPs should be encouraged to report eating occasions at distinct times if they can. A rule of thumb for using Extended Consumption is that the respondent is (1) unable to recall the times a new cup or glass of liquid or handful or bowl of snack/cereal/etc. was started; and/or (2) they can more easily recall the total amount consumed. For example, if an SP reported drinking coffee from her coffee pot all day and couldn't tell you how often or how much she drank in each cup she poured, but did know that she drank the whole 8-cup pot, record as Extended Consumption.

- Other, Specify** – If the respondent indicates that none of the occasions on the list describe the eating occasion, ask what they would call the occasion. As shown below (Exhibit 6-33), you will type “91” (Other, Specify) and type the response verbatim in the blank field under the Occasion OS column.

Exhibit 6-33. Eating occasion — Other specify

Food[9]	Tortilla chips	salsa			

Start | Inbox - Microsoft Out... | K:\CMGRP\NHANE... | Microsoft Word | Blaise Data Entry | 12:09 PM

If the respondent remembers a food during the Time and Occasion pass, finish entering/confirming the times and occasions for all listed foods, and then put the cursor in the next available food field (FoodName column) and enter the remembered food(s). Remember to ask “Anything else?” You will ask the details about the foods in Step 4. If the respondent misreports a food during the time and occasion pass, type “error” over the food name on the RFL. The time and occasion will not be collected for any misreported foods.

When you have finished the T/O pass, follow the steps below.

- (1) Press ENTER.
- (2) Press END.

The AMPM program will sort the occasions (meals) in chronological order and will group them together for Step 4 of the Intake Interview.

Before you leave this screen, it is **very important** that you check the foods and the times and occasions to make sure all the information is correct. For example, make sure you didn't inadvertently enter 'am' for a dinner occasion, or enter a generic food when the SP reported something more specific. This is your opportunity to make sure the information you collected is correct. It will make the entire interview go more smoothly.

6.7 Step 4: The Detail and Review Cycle (DRC)

The Detail and Review Cycle (DRC) is Step 4 of the instrument. All the food detail and amount information for all foods listed on the RFL will be collected in this step. The AMPM organizes the foods so that they can be collected in the order the SP **ate** them (rather than the order the respondent remembered and reported them).

As shown in the flowchart on the next page (Exhibit 6-34), the DRC flows in chronological order, beginning with the interval between midnight and the first occasion and with the period between the last occasion and midnight. In between are eating occasions represented by the boxes. Probes for collecting the details and amounts eaten of each food are located in food categories. For each reported food the program accesses the appropriate food category.

Exhibit 6-34. Detail and Review Cycle

6.7.1 Measuring Guide Instructions Screen

This screen introduces the respondent to the measuring guides (Exhibit 6-35). The text of the screen is determined by the response entered at the beginning of the interview. Read the screen, then enter '1' and continue.

Exhibit 6-35. Measuring guide instructions screen

ECFFLSnacks	2	RECMidntToFirstOcc	<input type="checkbox"/>

6.7.2 Midnight to First Occasion Probe

This probe (Exhibit 6-36) covers the time period between midnight and the SP's first eating occasion for the recalled day. This is the first of several between interval probes. Between interval probes ask about the time periods in-between the eating occasions the SP has reported.

Exhibit 6-36. Midnight to first occasion probe

The screenshot shows a window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The interface includes a menu bar (Forms, Answer, Navigate, Options, Help) and a toolbar with various icons. The main form area displays the following information:

Intake | Sorted_RFL

Sample (23, F), E1.001.IN.18.001 (301) 555-1212

First, did you have anything to eat or drink between midnight yesterday and your 6:00 AM breakfast?

1. YES
 2. NO

At the bottom, there are two panels: "Forgotten Foods" and "Measuring Guides".

Label	Value
ECFFLIntroBeverage	2
ECFFLOtherDrk	1-3
ECFFLSweets	2
ECFFLSnacks	2

Label	Value
RECIInstructMeasGuides	1
RECIInstructOwnGuides	
RECIInstructNoGuides	
RECMidntToFirstOcc	

A "CONTINUE" button is visible on the right side of the "Measuring Guides" panel.

Note that the Probe is prefilled with the time and eating occasion (6AM Breakfast). If the occasion had only one food, for example "toast," the probe would read:

"First, did you have anything to eat or drink between midnight yesterday and your 6AM toast?"

If the respondent remembers some foods in response to this probe, enter “1” for “YES.” The AMPM will take you back to the RFL screen where you will enter the food names on the next available line in the FoodName Column. The program will take you through the details for this food later in this step.

Then ask “Anything else?” and record any other foods. Collect or confirm the Time and Occasion for the new food(s). After recording time and occasion for each food, follow the steps below.

- (1) Ask anything else?
- (2) Type “XXX” and press ENTER twice; and
- (3) Press END.

If the remembered foods were eaten during the period you are probing for, the program will bring up the details and amounts probes at this time. If they were eaten at a later time, the program will guide you to the details later in the interview.

6.7.3 Collecting Details and Amounts

The AMPM physically moves you to another part of the instrument that requires you to progress through some navigation screens. These will be discussed in detail in this section.

You will collect details on two types of food: primary foods and additions to primary foods. Primary foods refer to the original or “main” food that was reported. Additions refer to foods that were added to the primary food.

If the respondent remembers a primary food at any time while you are collecting the food details, you may return to the RFL by pressing “F10” and typing “RFL” in the tag box (Exhibit 6-37).

Exhibit 6-37. Type “F10” in box to go to RFL

If a respondent remembers an **addition** to a primary food, you will go back to the primary food and add the addition. Procedures for adding a remembered addition are detailed in Section 8.10.

6.7.3.1 Sequence of Screens

The screen shown next (Exhibit 6-38) is called the Continue/Redo Screen. It begins the sequence of collecting details and amounts. Notice the food header at the top of the question pane. It includes the Time, Occasion, and Food Name for the food you are about to probe at the top of the question pane.

Notice that there are two possible responses for this screen: “1” for “Continue” and “2” for “Redo.” If this is the first time you have been presented with this screen, say something like, “You said you had toast at 6AM” and press “1” for “Continue.” If you have completed the details for this food but need to make a change to a response, press “2” for “Redo.” **You can only choose ‘Redo’ after you have answered the Source question at the end of the Food category.** The program will take you back into the Food Category to change the response items.

4. Same As (food already reported by respondent or household)

FIBStart

SameAsInstruction

PizzaForm

PizzaForm05

There are four response items listed on this screen that represent the status of the food. The definitions of the status codes are as follows:

1. **Include in intake:** Select for all foods that are to be included in the Dietary Recall.
2. **Misreported:** Select for foods that a respondent reported but later remembered he did not eat. If you enter this code, the AMPM will take you to the next reported food.
3. **Needs data retrieval:** Select for a meal when a respondent cannot describe and cannot quantify. This code can only be selected for children less than 12 years old and adults who cannot report for themselves. You will return to this screen to change the code from “1” (“Include in intake”) to “3” (“Needs data retrieval”) after completing the Food category details. Data Retrieval procedures are discussed in Section 8.3.
4. **Same as:** Select for identical foods that a respondent reported earlier. Also use for identical foods that another SP in the household has already reported. You may only refer to intakes you previously collected. You will return to this screen to change the code from “1” (“Include in intake”) to “4” (“Same as”). The procedures for collecting the necessary information are described in Section 8.8.

When you enter “1” for “Include in intake,” the AMPM will take you to the food probes for that food. By choosing the “Redo” option on the Continue/Redo screen, you can return to this screen at any time to change the answer (i.e., “Misreported,” “Needs DR,” or “Same as”).

After you collect the food details and amount information for a particular food in the food category, the screen shown below (Exhibit 6-40) will appear. This signifies that you have completed the food probes.

6.7.3.2 Food Category Details

There are 132 food categories in this instrument. With the exception of breast milk (which is discussed in Chapter 8), all foods on the MFL are linked to a food category. The AMPM program allows you to access some categories more than others. You can enter most 5 times but some, such as coffee or condiments and sauces, can be entered 10 times. In the rare instance when a food is reported more frequently than allowed, an edit message will appear. See Chapter 8 for a list of food categories than can be entered 10 times, and for more details on the procedures to follow when you are denied access to a category.

Types of food categories. The food categories can be divided into four groups:

- **Group 1** - Includes the simple categories that ask a few detail questions and the amount eaten. More detail is not needed to code the food. Examples are MIL (Milk), FRU (Fruit), or BIS (Biscuit).
- **Group 2** – Has more complex categories that collect details on ingredients or preparation that describe the food. Examples include POU (poultry), STW (stew), or MXD (mixed dish).
- **Group 3** – Comprises categories that collect information on the amount of the reported ingredients. Examples are sandwiches, green salads, and hamburger on bun.
- **Group 4** - Contains a few categories that do not fit in the other groups. These are SOU (soup), which collects ingredients in a unique way; FMA (formula), BJU (baby juice), and JBF (jarred baby food), which ask about added foods as part of the food detail.

See Appendix B for a complete list of food categories sorted by group.

Specific probes. Every food category contains specific probes for each food or group of foods. The probes are designed to collect detailed description about foods and beverages reported, and the amounts eaten. Each question is on a separate screen (Exhibit 6-41) and the question names are displayed on the bottom half of the screen. Read the probes exactly as written.

The first probe in many categories asks “What kind was it?” A follow-up probe is in parentheses. Ask the follow-up probe if the respondent hesitates or doesn’t respond or understand the first probe. Note that the follow-up probe ends in the words “or something else.” This probe is written in this way to allow the respondent to give responses other than the ones you read.

Exhibit 6-41. Specific probes

There are a number of common features about the food categories that will help you conduct a smooth and effortless interview. They are listed below:

- **KIND.** “What kind was it?” Often refers to the flavor or variety of a food such as juice (orange or apple) or cheese (Cheddar or Swiss). May also refer to a name of a food such as Chicken a la King or Cobb salad. This probe is “prefilled” most often from the MFL.
- **BRAND.** “What was the brand name?” Refers to brand name of a product, including names of fast food places. Examples are Kentucky Fried Chicken (KFC) and The Country’s Best Yogurt (TCBY).

- **FAT USED.** “Was any fat or oil used in cooking or preparing this food?” Refers to any kind of fat being used in cooking or preparing a food.
- **FORM.** Was it fresh, canned, frozen, dried, or something else? Refers to a food’s form.
- **HOME RECIPE.** Was it made from a home recipe? This refers to foods that are made from scratch or from more than one ingredient and not from just a commercial mix.
- **PREP.** Was it baked, broiled, fried, or something else? Refers to how a food was cooked or prepared.
- **TYPE.** Was it regular, diet, lowfat, or something else? Refers to fat, caloric, sugar, salt, and/or caffeine content.
- **INGREDIENTS.** What were the ingredients? Ingredients are components of foods. There are 23 food categories that may ask for ingredients:
 - Alcoholic mixed drinks*
 - Baby food cereal
 - Breakfast bars
 - Hamburger on bun*
 - Dips
 - Eggs (scrambled or omelet)
 - Jello
 - Gravy
 - Green salads*
 - Hamburger helpers
 - Hot dogs*
 - Ice cream (sundaes)*
 - Macaroni and cheese
 - Mexican foods*
 - Milk shakes*
 - Other salads (not green salads)
 - Potatoes (mashed)
 - Rice (mixtures)
 - Sandwich categories*
 - Soups
 - Stews
 - Stuffings
 - Trail and snack mixes

*Some categories also ask for the amounts of the ingredients. These categories are starred above.

Prefilled responses. The program will “prefill” the response for some of the probes based on what was reported on the QL. This reduces the burden on the respondent and the interviewer by limiting the number of questions that must be asked. For example, if the respondent reports a Big Mac for lunch, the AMPM will “prefill” all the food detail probes (fast food sandwich, brand, and sandwich name). The only question you ask is whether anything was added to the food as illustrated in the two screens below (Exhibits 6-42 and 6-43).

Exhibit 6-42. Prefilled responses — Screen 1

The screenshot shows the Blaise 4.7 Data Entry software interface. The title bar reads "Blaise 4.7 Data Entry - C:\Aisis\Intake09\Intake". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". The toolbar contains various icons for help, warning, undo, redo, information, delete, copy, paste, and save. The main window shows the following content:

How to record probe responses. You must record a response to every probe asked in the food categories. The response choices will be either listed on the screen or listed in a table called a Look-Up Table (LUT). Food probes that have too many response choices to fit on a screen will store the responses in LUTs. Almost all probes allow the response choice “Other Specify.” This choice permits an open-ended response if none of the choices listed is reported by the respondent.

In most cases the response choices are listed in alphabetical order. However, there are some categories that list response items in an order that we think will make more sense to you than alphabetical order. As in the example below (Exhibit 6-44), when probes ask for the kind of milk drunk or used in a recipe, it makes sense to choose “1%” and 2%” by selecting “1” or “2.” See screen example below.

Exhibit 6-44. Response items

The screenshot shows the Blaise Data Entry software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The window contains a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main area displays "Intake | Sorted_RFL" and "Sample (58, M), E1.001.IN.18.001 (301) 555-1212". A text entry field contains "Milk, 8:00 AM, breakfa". Below this is a question: "What kind was it? (Was it 1%, 2%, whole, skim, soy, buttermilk, or something else?)". The response options are listed in three columns:

- 1. 1% lowfat milk
- 2. 2% reduced fat milk
- 3. Whole milk
- 4. Skim/Nonfat milk
- 5. Acidophilus milk
- 6. Breast milk
- 7. Buttermilk
- 8. Calcimilk
- 9. Calcium fortified milk
- 10. Chocolate milk
- 11. Coconut milk
- 12. Cow's milk
- 13. Cream
- 14. Creamer
- 15. Dry milk
- 16. Evaporated milk
- 17. Filled milk
- 18. Formula
- 19. Goat's milk
- 20. Half and half
- 21. Imitation/Substitute milk
- 22. Lactaid milk
- 23. Lactose reduced milk
- 24. Malted milk/Milk drink
- 25. Nonfat dry milk
- 26. Powdered milk
- 27. Rice Dream
- 28. Rice milk
- 29. Soy milk
- 30. Sweetened condensed milk
- 91. Other, Specify

At the bottom of the window is a table with the following columns: "FIBStart", "IncludeInIntake", and "ADDFoodName". The table contains the following rows:

FIBStart	IncludeInIntake	ADDFoodName
<input type="checkbox"/>	<input checked="" type="checkbox"/>	ADDFoodName
SameAsInstruction		ADDFoodName
MilkKind	<input type="checkbox"/>	ADDFoodName
MilkKindDS		ADDFoodName
MilkType	<input type="checkbox"/>	ADDFoodName

Unit response items are typically grouped in like units such as volume, weight, general units, and food models; and listed in ascending order of volume or size. Details on recording unit responses are described in Section 6.7.3.4.

2. **Choose one response from Look-Up Tables.** When there are too many response items to fit on a screen, a Look-up Table (LUT) is used to hold the responses. You will know when a food probe contains a LUT because there will be no response items to choose from on the screen. LUTs are used for both single response and multiple response probes. Searching for a food on the LUT is the same as the trigram searching discussed in the MFL section (6.4.1). The LUT shown next (Exhibit 6-46) will appear when you enter a response to the kind probe for bread.

Exhibit 6-46. Look-up Table (LUT) responses

White with whole wheat swirl bread	BRE035		white with whole wheat swirl bread

Search: whea

Key type: TrigramFood AlphaFood

As in the MFL trigram search, the search finds the foods that best match the search term, in this case “wheat bread.” You cannot use the abbreviations on the MFL to search the Look-Up tables. Once the food is highlighted on the search screen, press ENTER to select the food.

Probes that commonly, but not always, have response items in LUTs include: KIND, TYPE, and INGREDIENTS.

3. **Choose multiple responses - Code all that apply (CATA).** Some probes can have more than one answer. This is called a Code All That Apply or CATA. Food probes that are commonly, but not always CATA’s, include: TYPE, FAT, and INGREDIENTS.

There are three different ways of entering CATA responses, depending on the information requested.

- **Table format** – A table format allows you to enter multiple responses to a question in separate fields. Responses are selected from an enumerated list or a LUT. Generally, when you see a table format, follow-up information is required about the responses (i.e., amount or type). However, CATA responses chosen from a LUT will always be in a table format, even if they do not have a follow-up question. Generally you can enter 15 responses into the table; however, for ‘type’ questions the limit is 5, and for Lunchables, the limit is 3.

The instruction “ENTER ALL THAT APPLY IN SEPARATE FILES” tells you that multiple responses are allowed for a question (Exhibit 6-47).

If a respondent reports more than one answer, enter the response in the field and continue adding responses in additional blank fields until the SP finishes reporting responses. Then press ENTER on the blank line, and the program will go to the next detail probe.

You will type in the LUT responses one-by-one and list the enumerated responses by number (Exhibit 6-48).

Exhibit 6-47. Table format enumerated responses

The screenshot shows a software window titled "Blaise 4.7 Data Entry - C:\Nisis\Intake09\Intake". The interface includes a menu bar (Forms, Answer, Navigate, Options, Help) and a toolbar with various icons. The main content area displays the following text:

4. **Choose Refused (F7).** If the respondent will not provide the details of a food, select F7 for Refused to skip through the probes and continue with the interview. Use this key very sparingly and only when it is evident that the respondent cannot or will not provide the details (Exhibit 6-51).

Exhibit 6-51. Refused response

The screenshot shows the Blaise Data Entry application window. The title bar reads "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". The toolbar contains icons for file operations and help. The main window has tabs for "Intake" and "Sorted_RFL". The data entry area shows the following text:

Sample (23, F), E1.001.IN.18.001 (301) 555-1212
Nachos Mexican, 6:30 PM, supper
What kind of filling or topping did it have? (Was it beef, chicken, pork, cheese, bean or something else?)

Below the text entry area is a list of variables:

MexFoodSourceDS	MexFoodCommFillKind0
MexFoodSourceName	MexFoodCommFillKind
MexFoodBrand	MexFoodCommFillKind0
MexFoodBrandDS	MexFoodCommFillKind
MexFoodCommFillKind	MexFoodCommFillKind0

The "MexFoodCommFillKind" variable is currently selected and shows a red exclamation mark icon, indicating a refused response.

5. **Choose Don't Know (F8).** If the respondent does not know the answer, select F8 for a Don't Know response. DK is an acceptable answer (Exhibit 6-52).

Exhibit 6-52. Don't know response

The screenshot shows the Blaise Data Entry application window. The title bar reads "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". The toolbar contains icons for file operations and help. The main window displays the "Intake" form with the following content:

Sample (23, F), E1.001.IN.18.001 (301) 555-1212

Nachos Mexican, 6:30 PM, supper

What kind of filling or topping did it have? (Was it beef, chicken, pork, cheese, bean or something else?)

The bottom section of the form is a data table with the following fields:

MexFoodSourceDS	MexFoodCommFillKind0
MexFoodSourceName	MexFoodCommFillKind
MexFoodBrand	MexFoodCommFillKind0
MexFoodBrandDS	MexFoodCommFillKind
MexFoodCommFillKind	MexFoodCommFillKind0

The "MexFoodCommFillKind" field is highlighted with a yellow question mark icon, indicating a "Don't Know" response.

6. **Other, Specify (91 or OS)** - If the respondent's answer is not listed as one of the possible response options, you can select "Other, Specify" (OS). The OS is included on an enumerated list or a LUT.
 - **If Enumerated list** – Enter "91" to select OS and type the answer in the text field that opens up in the answer pane portion of the screen (Exhibit 6-53).
 - **If LUT** – Type "OS" in a LUT and press ENTER to access the text field and type in the answer.

Exhibit 6-53. Other specify response

Linking Between Food Categories. A total of 51 of the 132 food categories have links to other food categories to allow you to ask the correct food probes for a particular food. Some of the food categories only link to one other category, while others link to as many as 25 different categories. For example, if respondents report “coffee” on the QL but in the details cycle describe it as an alcoholic beverage such as “Irish coffee,” that response item will link to the Nonalcoholic and Alcoholic Beer, Wine, Cocktails, Liquor category. Conversely, if a respondent reports a mixed dish on the QL but describes it in the food details cycle as a pot pie, jambalaya, baked beans, quiche, macaroni and cheese, or another specialty mixed dish, the program will link those response items to new categories.

The screenshot below (Exhibit 6-54) shows that the respondent reported “cereal” on the Quick List pass. “Cereal” links to the ready-to-eat cereal category. Because the respondent said the cereal was cooked, the program links to the cooked cereal category.

Exhibit 6-54. Linking between food categories — Screen 1, Original category

FIBStart	1	IncludeInIntake	ADDFoodName
SameAsInstruction			ADDFoodName
CerealRTEBrand	Total		ADDFoodName
CerealRTEBrandOS			ADDFoodName
CerealRTEKind	1		ADDFoodName

This screen appears (Exhibit 6-55) when the program is leaving the ready-to-eat cereal category and linking to the cooked cereal category.

Exhibit 6-55. Linking between food categories — Screen 2, Finish original category

The screenshot shows a window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The interface includes a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu is a toolbar with various icons. The main area is divided into sections:

- Intake | Sorted_RFL**: A header section.
- Sample (58, M), E1.001.IN.18.001 (301) 555-1212**: Sample identification text.
- Cereal, 8:00 AM, breakfast**: The current category being finished, with a mouse cursor over the text.
- [PRESS 1, ENTER AND END.]**: Instructional text for the user.
- 1. CONTINUE**: A radio button option for the next step.
- Variable List**: A list of variables including "CerealRTEModelLevel", "CerealRTEModelLevelID", "CerealRTEBoxWUnit", "CerealRTEBoxWUnitOS", and "CerealRTEBoxWAmt".
- FIBEnd**: A field with a small square indicator.

The next screen that appears (Exhibit 6-56) is the Transition screen.

Exhibit 6-56. Linking between food categories — Screen 3, Transition screen

This screen lets you know that you are moving to another food category to collect the food details.

The next screen that appears (Exhibit 6-57) is the Continue/Redo screen for the Cooked Cereal.

Exhibit 6-57. Linking between food categories — Screen 4, Continue/Redo new category

Notice that the food name in the Food Header is “cereal” rather than “cooked cereal.” This is because the Food Header information comes from the information you entered on the RFL. However, there is an asterisk (*) next to the food name and also an asterisk next to the food label.

Finally, you will see the beginning screen (Exhibit 6-58) for Cooked Cereal.

Exhibit 6-58. Linking between food categories — Screen 5, New category

The screenshot shows the Blaise 4.7 Data Entry software interface. The title bar reads "Blaise 4.7 Data Entry - C:\v\sis\Intake09\Intake". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". The toolbar contains various icons for navigation and editing. The main content area is divided into three sections:

- Top Section:** Displays "Intake | Sorted_RFL | Navigation_Help |". Below this, it shows "Marcia (17, F), Yr11.s248.v1" and "Cereal*, 2:00 PM, snack". A blue instruction reads "[SELECT ONE OF THE FOUR OPTIONS LISTED BELOW]".
- Middle Section:** Contains four radio button options:
 - 1. Include in intake (collect details)
 - 2. Misreported (drop food from intake)
 - 3. Needs data retrieval
 - 4. Same As (food already reported by respondent or household)
- Bottom Section:** A list of variables for data entry, including:
 - FIBStart
 - SameAsInstruction
 - CkdCerKind
 - CkdCerKindOS
 - OatmealBrand
 - OatmealBrandOS
 - CkdCerTypeCook
 - CkdCerTypeCookOS
 - CkdCerLiquidPrep
 - CkdCerLiquidPrepOS[1]
 - CkdCerLiquidPrepOS[2]
 - CkdCerLiquidPrepOS[3]
 - CkdCerLiquidPrepOS[4]
 - CkdCerLiquidPrepOS[5]
 - CkdCerFatPrep
 - CkdCerTypeFat
 - CkdCerTypeFatOS[1]
 - CkdCerTypeFatOS[2]
 - CkdCerTypeFatOS[3]
 - CkdCerTypeFatOS[4]
 - CkdCerTypeFatOS[5]
 - CkdCerRealButter

You will **never** have to decide to link to a Food Category. The AMPM program automatically links the categories.

The table below (Exhibit 6-59) lists the 51 food categories that contain response items that link to other categories. The table also presents the number of response items within each category that link to other categories, and the number of new categories the original category links to. For example, the category **Barbecue, Sloppy Joe** contains one response item that links to one other category while the **Beef, Lamb, Veal, and Game Meats** category contains 43 response items that link to one other category. The **Bread (Not Sweet)**, on the other hand, contains 9 responses that link to 4 other categories. A complete list of the response items that link to new categories can be found in Appendix B with the food category listing.

Exhibit 6-59. Table of categories that link to other categories

Unknown Foods	441	121

Edit Messages. As discussed earlier, an Edit Message appears when you have entered a response that is illogical or out of range (Exhibit 6-60). Edits occur at the Time and Occasion Probes and with certain food characteristics. The message identifies the problem and asks you to change it.

There are two kinds of edits: soft and hard. **Soft edits** ask you to confirm the answer that you just recorded. Soft edits allow you to leave the screen without changing the response if the respondent confirms that the answer was correct. To leave the screen you can either enter “ALT S” or use the mouse to select the “Suppress” button. If the answer recorded is incorrect, press ENTER to activate the “Goto” button which will move the cursor to the answer.

Exhibit 6-60. Edit messages

A **hard edit** message occurs when you enter a response that is not allowed. Unlike soft edits, you must change the answer before continuing with the interview. An example of a hard edit is illustrated on page 6-29.

6.7.3.3 Additions

An addition is any food that is added to the primary (original) food. Examples include butter, margarine, jelly, or peanut butter added to breads, milk, and cream added to cereal or coffee. Additions may be added by the SP or by someone else. For instance, butter is an addition to bread whether the SP butters it at the table **or** someone else butters it and puts it on the plate. You will collect descriptive and quantitative information about all additions.

Because additions to foods are easily forgotten by respondents, almost every food category asks the question “Did you add anything to the food?” (See Exhibit 6-61 below). If, after asking the additions question the respondent seems puzzled or asks for clarification, you should say “Did you put anything (on/in) the (FOOD) before you (ate/drank) it?” Following are procedures for collecting and recording additions.

First, type “1” (YES) to the question “Did you add anything to the food?”

Exhibit 6-61. Addition screen

The screenshot displays the Blaise Data Entry software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The interface includes a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu is a toolbar with various icons. The main content area shows the following information:

- Sample (58, M), E1.001.IN.18.001 (301) 555-1212
- Cereal*, 8:00 AM, breakfast
- Did you add anything to the food?
- Radio button options: 1. YES, 2. NO
- Field labels: CkdCerTypeFatOS[5], CkdCerRealButter, CkdCerTypeCrisco, CkdCerTypeCriscoDS, AddAnything (with a text input field), and ADDFoodName.

Next, you will notice that a blank text field labeled ADDFoodName opens up for you to type the first addition (Exhibit 6-62). The AMPM program accepts up to five additions per food. If a food has more than five additions, record the other additions including their description and amounts, in the Remark Box (F6 function key).

Exhibit 6-62. Addition screen — Use Trigram search

The screenshot shows a window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main area of the window is divided into two sections. The top section is titled "Intake | Sorted_RFL" and contains the following text: "Sample (58, M), E1.001.IN.18.001 (301) 555-1212", "Cereal*, 8:00 AM, breakfast", and "What did you add to the food?". The bottom section is a list of checkboxes and a text field. The list includes: "CkdCerTypeFatOS[5]", "CkdCerRealButter", "CkdCerTypeCrisco", "CkdCerTypeCriscoOS", "AddAnything" (with a checkbox containing the number "1" and the label "Yes"), and "ADDFoodName" (with a text input field).

When you begin to type, the MFL trigram search screen comes up.

After you select the food on the MFL and press ENTER, the food will appear in the text field (Exhibit 6-63). Always ask “Anything else?” after the respondent has reported an addition to a food.

Once all the additions have been entered, press ENTER on the blank line to move to the next probe.

Exhibit 6-63. Addition screen — Multiple additions

The screenshot shows a software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main area of the window is divided into two sections. The top section contains the text "Sample (58, M), E1.001.IN.18.001 (301) 555-1212" and "Cereal*, 8:00 AM, breakfast". Below this is a question in pink text: "What did you add to the food?". The bottom section is a list of input fields. The first field is labeled "AddAnything" and contains the value "1" with the word "Yes" to its right. Below it are five fields labeled "ADDFoodName". The first "ADDFoodName" field contains "Rice milk". The second "ADDFoodName" field contains "Brown sugar" and is highlighted with a blue selection box. The other three "ADDFoodName" fields are empty.

Do not record salt, ground pepper, spices, and herbs as additions. However, foods like salsa and hot peppers should be collected and probed.

Also, the AMPM has been programmed so that it will not ask the additions questions for a food reported as an addition. For example, milk reported on the RFL has an addition probe. But when milk is reported as an addition (e.g., milk added to coffee) there is no additions probe.

Any food can be an addition if the respondent describes it as having been added to the portion of food. However, there are some foods that are more commonly reported as additions. These include:

- Butter and margarine
- Salad dressing
- Sauce, gravy, and salsa
- Mustard and catsup
- Mayonnaise and tartar sauce
- Dip (to crackers, chips, vegetables)
- Relish
- Cream and milk (to cereal, coffee, etc.)
- Sugar and sweeteners
- Jam, jelly, and syrup
- Water*

*When water is reported as an addition, choose “Water as an addition” on ADDFoodName.

If the respondent reports an addition to a food when reporting the QL, you may add that food in the Comments field (Exhibit 6-64). This information will then be displayed along with the primary food name, time, and occasion when you collect the details for the primary food. Do not enter an addition on the RFL because then it won't be associated with the primary food.

Exhibit 6-64. Add additions in comments field during QL pass

Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE

Adding Additions

Procedures for adding remembered adds or misreported additions are detailed in Chapter 8, Section 8.10.

6.7.3.4 Obtaining Quantities

This question asks for the actual amount of the food item eaten. Do not accept a range value for quantity. If an SP reports eating 10 to 20 potato chips, ask: “Can you give me your best estimate of the number of chips you ate? or What would you like me to enter here?”

There may be situations when the respondent cannot give you one amount. For example, respondents may report multiple bean bags, or a size between two circles. In those situations, type “1” on

the amount screen and enter OS (91) on the unit screen. Enter the SP's response verbatim in the OS field. Make sure the response you enter will be helpful to the coders.

Only **record the amount eaten**– not the amount served. Probe carefully when an SP reports sandwiches, chicken parts, and meats such as pork chops. SPs may be so intent on describing the size of the serving to you that they forget that the whole portion wasn't eaten.

If the SP seems unsure of the quantity, suggest possible ways to respond from the list of units on the amount screen. If the SP is unable to provide the amount eaten, code DK (F8 function key). This can be done at either the amount or unit screen. However, if you code DK for an amount, the unit probe is not asked.

Order of Units on Screen. There are four categories of units you may see on a food category screen: Volume Units, Weight Units, General Units, and Food Model units. In general, like units within each category are grouped and listed in ascending order of volume or size.

- VOLUME UNITS are ordered as: teaspoon, tablespoon, cup, then fluid ounce, pint, quart, half gallon, and gallon, then milliliter and liter.
- WEIGHT UNITS are ordered as: weight ounce, gram, and pound.
- GENERAL UNITS include a number of different types of units: item or food names, general sizes, container units, and category specific units.
 - **Relative Sizes** are ordered as: miniature, small, medium, large, and extra large.
 - **Container Units** are ordered as: bottle, can, carton, container, drink box, juice box, pouch, and school lunch carton. If you choose these units you will see a screen asking for the volume of the container if it is needed.
 - **Category Specific Units** are listed in ascending order. For example, the Cake Category includes the units “cupcake,” snack cake,” and “whole cake.”
 - **Meat Specific Units** includes the units in alphabetical order: chop, cutlet, patty, rib, and steak.
- FOOD MODELS include a number of models that are listed in alphabetical order. The Vessel Models (glasses, mugs, bowls) will have a follow-up question about the fill level of the vessel.

6.7.3.5 Measuring Guides

Each household was given a set of measuring guides when they were scheduled for the telephone interview. Included in the set of measuring tools are both 2-dimensional (2D) and 3-dimensional (3D) guides. 2D guides are drawings of vessels and shapes. The 2D guides are consolidated into a booklet called the Food Model Booklet, or FMB. 3D guides are actual tools and include household spoons, measuring cups and spoons, and a ruler.

To ensure that data are recorded in a consistent manner, you must be thoroughly familiar with the portion size models and their correct use. Improper entry of food models can result in either overestimation or underestimation of nutrient intake. When the respondent uses the mugs, bowls, and glasses, have them show you the line that best describes the amount they ate. They may report between the lines or to the top of the vessels. If they use the measuring cups, spoons, or the household spoons to describe the amount they ate, make sure they estimate the amount of a **level** spoonful. This section will provide more details on recording amounts of foods using the measurement aids.

General guidelines for using the measuring guides are described below.

2-D FOOD MODEL BOOKLET (FMB). The FMB will be your primary measuring guide during the telephone interview. The FMB contains pictures of glasses, mugs, bowls, mounds/pats/spreads, and circles that are the same size as the 3D models used in the MEC in-person interview. In addition it includes a grid, two wedges, and a page of shapes and chicken pieces. The guides are listed below with directions on how to instruct the respondents to use the guides.

GLASSES (G1-G8). There are 8 glasses of various sizes and shapes on 3 pages of the booklet as shown in the examples below (Exhibit 6-65). The glasses will be used most often to report the amounts of liquids, but may also be used to report solid foods. You will ask SPs to choose the glass that best represents the volume of the beverage they drank and identify the glass and the amount by the label and the red lettered level line. If they report a quantity between the lines, enter it in OS.

Exhibit 6-65. 2D glasses

Glass instructions - Behind Tab 2 of the FMB are three pages of glasses. Choose one and then tell me the number and the red line that shows the amount you drank.

MUGS (MG1-MG3). There are three different sizes of mugs (Exhibit 6-66). The mugs will be used most often to report the amounts of liquids, but may also be used to report the amounts of solid foods. Have the SPs choose the mug that best represents the volume of the beverage they drank and identify the amount by the label and the green lettered level line for that volume. If they enter a quantity between the lines, enter it in OS.

Exhibit 6-66. 2D mugs

Mug instructions - Turn to the mugs on the front of Tab 3. There are three mugs on this page. Choose one and then tell me the number and the green line that shows the amount you drank.

BOWLS (B1-B5). There are 5 bowls of varying sizes on 2 pages of the booklet. An example is shown below (Exhibit 6-67). The bowls are used to report both liquid and solid foods such as soup, spaghetti, and vegetables. As with the glasses and the mug pages, each bowl is labeled and has blue lettered level lines. Ask the SPs to choose the bowl that best represents the size of the vessel they ate from and report the label and the blue lettered level lines for the volume. If the SP reports an amount protruding from the top, have them estimate using another model. If they report a quantity between the lines, enter it into OS.

Exhibit 6-67. 2D bowls

Bowl instructions – Behind Tab 3, there are two pages of bowls. Choose one and then tell me the number and the blue line that shows the amount you ate.

PATS and SPREADS (M1 and M2). There is 1 page of spreads (Exhibit 6-68). There are 2 knives on the page with a pat on the knife and a spread below it. The pats and spreads at each knife are the same amounts. Use the pats and spreads to estimate small amounts of food such as butter, jam, cream cheese, mayonnaise, and peanut butter. Have the SP report the label that best represents the amount consumed. Do not ask the SP whether it was a spread or pat.

Exhibit 6-68. 2D pats and spreads

M2

***Pat/spread instructions** – Behind Tab 4, on the left, are drawings of pats and spreads. Please tell me the one that looks like the amount you ate. If none of these look like the amount you ate, it is okay to use part of one or more than one.*

MOUNDS (M3-M9). There are 7 mounds of increasing size on 3 pages of the booklet (Exhibit 6-69). The mounds will be used for foods that mound on a plate such as spaghetti, vegetables, and potato salad. Within the booklet these mounds are on a see-through sheet with a plate beneath them. You may have the SP pick the sheet up if it helps him to visualize his food better. Each mound is identified with a label. Have the SP report the label of the mound that best represents the amount of food he consumed. The SP may report part of a mound or combinations of mounds.

Exhibit 6-69. 2D mounds

Mound instructions – Behind Tab 4 on the right are three pages of drawings that represent different amounts of food. Please tell me the one that looks like the amount you ate. If none of these look like the amount you ate, it is okay to use part of one or more than one.

CIRCLES (C1-C10). There are 10 circles from 1” to 10” in diameter on one page of the booklet (Exhibit 6-70). Circles C1-C9 are on a see-through sheet with a plate beneath them. The plate represents the 10” circle. Use the circles to estimate the diameter of round foods such as tortillas, pancakes, biscuits, and pies. The circles, like the mounds, are on a see-through page with the plate beneath. As with the mounds, you may have the SP pick up the sheet and lay it on the plate if that helps them to visualize the amount they ate. Have the SP choose the circle that best represents the size of his food. The SP may report the label or the color of the circle (for example, C3 or red). A size between two circles may also be reported.

Exhibit 6-70. 2D circles

Circle instructions – Behind Tab 5 is a set of colored circles that you can use to estimate the size of your (FOOD). If the size of your food was between two circles, tell me that.

GRID. The grid is on one see-through page with a plate beneath and is a square with 1-inch columns and rows with ½ inch delineations (Exhibit 6-71). Use the grid to estimate the dimensions of foods such as meatloaves, cake, or brownies. There is a star in the lower left-hand corner so that the SP can orient his food and visualize it on the grid. The SP may report the number on each side of the grid, or between the numbers. It does not matter which side is used to report length or width.

Exhibit 6-71. 2D grid

Grid instructions – *Behind Tab 6, there is a grid you can use to estimate the size of your (FOOD). Imagine your (FOOD) is placed in the corner next to the star. Estimate its size by using the numbers or colors on each side of the grid.*

WEDGES. There are two wedges: a large 9” long wedge and a small 5” long wedge (Exhibit 6-72). Each wedge has an overlapping arrow pointer that moves along the arc of the wedge. The wedge has a star in the lower-left corner so that the SP can orient his food and visualize it on the wedge.

- The **small wedge** is 5 inches in length. Use the numbered increments along the length (radius) of the wedge and move the arrow to the alphabetized segments to estimate the size of wedge shaped foods (e.g., 5E). This wedge is used primarily for cakes and pies.
- The **large wedge** is 9 inches in length. Use the numbered increments along the length (radius) of the wedge and move the arrow to the alphabetized segments to estimate the size of wedge shaped foods (e.g., 9E). This wedge is used primarily for pizza.

Introduce the wedge by saying something like “Now let’s recreate your piece of (Food).”

Exhibit 6-72. 2D wedge

Wedge instructions. Behind Tab 7 are two wedge shapes. Use the (small/large) one for your (FOOD). Move the arrow to the bottom line. Now, imagine the tip of your food in the corner next to the star. Starting from the large purple star, use the numbers on the bottom line to tell me the length of your (FOOD). Now with your finger on the arrow at that number, move the arrow up until the space between the arrow and the bottom line looks like the size of the piece you ate. Tell me the letter that is closest to the point of the arrow.

THICKNESS BLOCKS. The thickness blocks are located to the left of the circle, grid, and wedge pages (Exhibit 6-73). They are labeled with the size in inches. For example, ‘T3’ equals 3/8” thick. Have the SP use these blocks to report the height or thickness of foods when it is needed.

Exhibit 6-73. 2D thickness blocks

Thickness blocks instructions. Now look at the black blocks on the opposite page. Choose the one that looks like the thickness of your (FOOD) and tell me the number.

SHAPES AND CHICKEN PIECES. This chart is on the last page of the FMB. Use the shapes to describe the amount of food eaten with one or two dimensions. Since there are some foods that are not easily represented by food models, the shapes offer the respondent another alternative. The chart can also be used along with the ruler. Use the chicken pieces to specify the particular part of the chicken consumed.

3D GUIDES. In addition, you can refer the respondents to the 3D guides. They include household spoons, measuring cups, measuring spoons, and a ruler.

HOUSEHOLD SPOONS: (Tablespoon, Teaspoon) There are 2 household spoons of different sizes (Exhibit 6-74). Use the household spoons to estimate the volume of small amounts of liquid and solid foods. Have the respondent identify the spoons as ‘small metal’ or ‘large metal’ spoon and report in level spoonfuls.

Exhibit 6-74. Household spoons

MEASURING CUPS: (1/4, 1/3, 1/2, 1C) The set of measuring cups is comprised of 4 cups of different sizes (Exhibit 6-75). Use the measuring cups to estimate the volume of most foods. For example, these cups would be used to report liquids such as beverages and soups, solids such as potato salad, rice, or casseroles, and semi-solids such as ice cream and pudding. The AMPM will automatically probe for form (e.g., sliced, chopped, shredded) when it is required. Make sure the respondent estimates the amount of a level cup.

MEASURING SPOONS: (1/4 tsp., 1/2 tsp., 1 tsp., 1 Tbsp.) The set of measuring spoons is comprised of 4 spoons of different sizes (Exhibit 6-75). Use the measuring spoons to estimate small amounts of liquids or solid foods. Have the respondent report level spoonfuls. Make sure the respondent estimates the amount of a level spoon.

Exhibit 6-75. 3D measuring cups and spoons

RULER: (L, W, H) Use the ruler to estimate dimensions in inches (Exhibit 6-76). For example, the ruler could be used to estimate the length, width, and height of a piece of cornbread, and the length and width of a piece of meat or poultry (height would be estimated from the thickness sticks).

Exhibit 6-76. 12-inch ruler

6.7.4 Food Source Question

The Food Source question is part of the Detail and Review Cycle. After you collect all the detail and amount information about a food, you will see a screen that instructs you to enter 1-ENTER-END. As discussed earlier, this screen indicates that the program is moving you from the Food Categories cycle back to the program.

This Food Source question follows the category end screen (Exhibit 6-77). This question is asked for each food reported within an occasion, because foods eaten at a single occasion may come from more than one source. For example, an SP may have gotten a hamburger at McDonalds, but when he took it home to eat it, he also drank a can of soda he had purchased earlier from the store.

Since the most frequent source of foods is from the “store,” the first question you ask will be “Did you get (this/most of the ingredients for this) {FOODNAME} from the store?”

If the response is “No,” you will ask,

“Where did you get (this/most of the ingredients for this) {FOODNAME}?”

Foods eaten together, that were prepared at home, may come from more than one source. For example, an SP may have prepared a salad that included ingredients from both the store and the garden. Therefore, when you ask the question for a multiple ingredient food, ask, “Did you get most of the ingredients for this {FOODNAME} from the store?”

And if the answer is “No” then ask,

“Where did you get most of the ingredients for this {FOODNAME}?”

Exhibit 6-77. Source question screen

If the respondent hesitates when you ask the follow-up source question, read the question in parenthesis. When you read this for the first time, make sure you read the complete question so that the respondent understands the type of answer expected. All of the possible response options are listed on the screen (Exhibit 6-78). The OS (91), RF (F7), and DK (F8) are acceptable responses to both the Food Source question and the follow-up question.

RECTransition		

If the respondent mentions the source of the food earlier in the interview (e.g., McDonald’s hamburger), you may confirm the source. For example, say something like:

Interviewer: “You obtained the hamburger from a fast-food place. Is that correct?”

Try to fit the respondent’s answer into one of the response items on the screen. There may be situations where you need to help the respondent decide the source of the food item. The following list defines the food sources and can be accessed as a Help Screen using the F1 key. The Help screen is only available at the second question. This screen is a “quick reference” when a respondent is not certain how to report or needs clarification on a code. Additional information about the Help Screen can be found in Appendix C.

- Code 1, Store** – This code refers to any type of store. It also includes gas stations, produce stands, convenience stores such as 7-11, and farmers’ markets. If the respondent uses the word “store” in his or her answer, use this code. Other stores that might be the source of food include toy stores, department stores, delis, and specialty stores such as Starbucks, Krispy Kreme, and Dunkin Donuts.

- Codes 2 and 3, Restaurant** – Code 2 refers to a restaurant and code 3 refers to a fast food place or a pizza place. A restaurant is distinguished from a fast food place by waiter/waitress service. If a respondent is not sure which answer to choose, ask her if the place has waiters and waitresses. If the response is “Yes,” code 2. If the response is “No,” the source is either a fast food place (3) or a cafeteria (6). Respondents can usually distinguish between fast food places and cafeterias.

If the respondent reports “pizza place,” code 3 regardless of the type of service. Also code pizzas that are delivered as 3.

All carryout and delivery food should be coded as “3.”

- Code 4, Bar/Tavern/Lounge** – This code includes bars, taverns, cocktail lounges and other “drinking places.” If a respondent is having difficulty deciding between codes 2 and 4, ask her if she considers the place to be an “eating place” or a “drinking place.”
- Code 5** – Use this code if the respondent reports restaurant with no other description. When you select code 5, you will see the follow-up question below (Exhibit 6-79).

Exhibit 6-79. Source question — Type of restaurant

The screenshot shows the Blaise Data Entry interface. At the top, the title bar reads "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". Below the title bar is a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". A toolbar contains various icons for file operations and navigation. The main window displays the question: "What kind of restaurant was that? Was it a restaurant with waiter/waitress service; a fast food or pizza place; a bar, tavern, or lounge; or a cafeteria?". Below the question are four radio button options: "1. Waiter/Waitress", "2. Fast Food/Pizza", "3. Bar/Tavern/Lounge", and "4. Cafeteria". At the bottom of the window is a data entry table with the following structure:

RECFIBDetailAddsAmts	1	Continue	RECFIBDetailAddsAmts
RECSrcStore	2	No	RECSrcStore
RECSrcOther	5	RestNoInfo	RECSrcOther
RECSrcOS			RECSrcOS
RECFish			RECFish
RECFishOS			RECFishOS
RECRestaurantKind			RECRestaurantKind

If the respondent cannot categorize the restaurant to one of the four options above (Codes 2, 3, 4, or 5), then code “DK” (F8 function key).

- **Code 6, Cafeteria, not school** – This code refers to all cafeterias except school cafeterias.
- **Code 7, Cafeteria, school** – This code refers to a school cafeteria and is defined as food provided by the school cafeteria, not food that the respondent may have gotten from a friend at school (code 16) or brought from home. Remember, this question asks about the source of the food, not where it was eaten.
- **Code 8, Child care center** – This code refers to food obtained at child care centers.
- **Code 9, Family/Adult day care center** – This code refers to family day care homes, which are private homes that provide day care for adults or children. The distinction between a family day care home and “someone else(’s)” home (code 16) is that the family day care home provides day care for a fee; that is, it is paid “babysitting.”
- **Code 10, Soup Kitchen/Shelter/Food pantry** – This code refers to emergency food sources and includes soup kitchens, shelters for the homeless, battered women, etc., and food pantries and food banks that provide food for people who cannot afford to buy food for themselves. This code describes a higher level of desperation than the food assistance programs included in code 12.
- **Code 11, Meals on Wheels program** – “Meals on Wheels” is a community program that provides meals to homebound elderly and disabled persons.
- **Code 12, Community food program** – This code refers to community food assistance programs that provide food to recipients on a regular basis. This code can be distinguished from codes 10 and 11 as it includes sources that provide food on a **regular** basis rather than an emergency basis. For instance:
 - Women, Infants, and Children (WIC) program when the respondent’s food came directly from the WIC office rather than from a store using WIC vouchers (which would be coded 1).
 - Senior citizens centers that offer meals on a regular basis, and state and federally-sponsored congregate meal sites.
- **Code 13** – This code refers to community programs that the respondent cannot describe more specifically (Exhibit 6-80). This code brings up the following question:

Exhibit 6-80. Source question — Type of community program

Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE

Forms Answer Navigate Options Help

Intake | Sorted_RFL

Sample (58, M), E1.001.IN.18.001 (301) 555-1212

What kind of community program was that? Was it a child care center; a family day care home or adult day care; a soup kitchen, shelter, or food pantry; Meals on Wheels; or some other community food program?

1. Child Care Center
 2. Family/Adult Day Care Center
 3. Soup Kitchen/Shelter/Food Pantry
 4. Meals on Wheels
 5. Community Food Program

RECSourceStore	2	No	RECSourceStore
RECSourceOther	13	CommunityProgramNo	RECSourceOther
RECSourceOS			RECSourceOS
RECFish			RECFish
RECFishOS			RECFishOS
RECRestaurantKind			RECRestaurantKind
RECCommunityProgram			RECCommunityProgram

If the program the respondent reports is not one of the first four listed, then select “5” for “Community Food Program.”

- **Code 14, Vending machine** – This code refers to any food purchased from a vending machine.
- **Code 15, Common coffee pot or snack tray** - This code refers to a common coffee pot or snack tray. Such sources are often found in office buildings or other work sites.
- **Code 16, From someone else/gift** – This code includes gifts and foods that were prepared or eaten in someone else’s home. It includes all sources not listed elsewhere when the respondent (or another household member) did not pay for the food.
- **Code 17, Meal order purchase** – This code only includes foods **purchased** by mail order by the household. It does not include gifts that may have arrived by mail (which would be coded 16).
- **Code 18, Residential dining facility** – This code refers to residential dining facilities. For example, a senior citizen community where the meals are eaten in a dining hall would be coded 18. It does not include federally-sponsored programs that are free for senior citizens (that would be coded 12).

- **Code 19, Grown or caught by you or someone you know** – This code, “grown or caught by you or someone you know,” refers to homegrown foods such as vegetables, as well as hunted game, such as deer.
- **Code 20, Fish caught by you or someone you know** – This code, “fish caught by you or someone you know,” refers to fish or seafood. Choosing this response brings up the following screen (Exhibit 6-81).

Exhibit 6-81. Source question — Where caught fish came from

The screenshot shows a software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main area displays the question: "Did it come from a freshwater lake, pond or river; the ocean; or a bay, sound, or estuary?". Below the question are four radio button options: "1. Freshwater lake, pond, or river", "2. Ocean", "3. Bay, sound, or estuary", and "91. Other, Specify". At the bottom of the window, there is a data entry grid with fields for "RECSOURCESTORE", "RECSOURCEOTHER", "RECSOURCEOS", "RECFISH", "RECFISHOS", "RECRESTAURANTKIND", and "RECCOMMUNITYPROGRAM". The "RECSOURCESTORE" field contains the value "2" and the label "No". The "RECSOURCEOTHER" field contains the value "20" and the label "FishCaughtByYouOth". The "RECFISH" field is currently selected and contains a blank space.

Respondents will probably only know the answer to this question if they caught the fish. Otherwise, DK is an acceptable response.

- **Code 24, Sport recreation, or entertainment facility** –This code refers to sports stadiums, sporting events, amusement parts, concerts, fairs, festivals, movie theaters, etc.
- **Code 25, Street vendor, vending truck** –This code refers to street concession stands, hot dog stands, coffee carts and food trucks.
- **Code 26, Fundraiser sales** – This code refers to food purchased from Girl Scouts, Boy Scouts, school fundraisers, and sports fundraisers.

- **Code 91, Other specify** - For answers that do not fall into an existing code, select “91” and record the answer verbatim in the open text field. If you are not sure how to code a respondent’s answer, select “91.”

You will continue to ask Details, Amounts, and Source for each food within an occasion. Once you complete all foods for one occasion, you will ask the Review of Occasion (Event) probe.

6.7.5 Review of Occasion

The Review of Occasion probe reviews the entire eating occasion and asks if the SP had any other foods/beverages at that occasion.

Notice in the example below (Exhibit 6-82) that the primary food mashed potatoes, and its addition, gravy, are also listed on the review screen.

Exhibit 6-82. Review of occasion screen

Read the screen as written. Since beverages are the most frequently forgotten foods, emphasize the word “drink.” For example, if you were reviewing the screen above you would say:

Interviewer: “For a snack, you had mashed potatoes with gravy. Did you eat or drink anything else?”

Emphasize the word “drink” when you read this review question since SPs often forget beverages they consume during the day. If the SP reports any new food, you will follow the steps below.

- (1) Enter “1” for “Yes.” The CATI will take you to the RFL.
- (2) Enter food, time, occasion on RFL.
- (3) Ask “Anything else?”
- (4) Type “XXX” and press ENTER twice.
- (5) Press END.
- (6) Begin to collect details for the remembered food(s).
- (7) Ask Source question.

In this interview, details about reported foods are collected in chronological order. Therefore, if the SP remembers a food for a different or new occasion, the AMPM will bring up the probes at the appropriate time. Foods eaten earlier than this occasion will be asked about at the end of the recall, and foods that were eaten at a later occasion will be probed in chronological order. Section 8.11 of Chapter 8 describes the procedures to follow if an SP remembers a food when RFL is full.

When you have probed for details about all remembered foods for the occasion, you will then ask the respondent if the meal was consumed at home.

6.7.6 Occasion Location Question

This question asks if the meal (occasion) was consumed at home (Exhibit 6-83). “At home” is defined as the SP’s dwelling unit and the surrounding areas that are used solely by the occupants of that dwelling unit. For example, meals eaten in the backyard would be considered “Home.”

Exhibit 6-83. Occasion location question screen

The screenshot shows a software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main area of the window displays the following text:

Sample (58, M), E1.001.IN.18.001 (301) 555-1212

Did you (eat/drink) this snack at your home?

[IF SP REPORTS BEGINNING EATING EVENT IN ONE LOCATION, BUT CONTINUING IT ELSEWHERE, CODE PLACE EATING EVENT BEGAN.]

Below the question are two radio button options:

1. YES

2. NO

At the bottom of the window, there is a field labeled "RECEventLocation" with a dropdown menu currently showing "No".

If the SP ate the meal at home, select “1” for “YES.” If the SP reports any place other than home, select “2” for “NO.” You will ask this question for the entire occasion. If the respondent reports beginning a meal at one place and ending it at another, code the Location Question where the meal/event began. For example, if an SP began breakfast at home but finished it in the car on the way to work, you would choose “at home.”

If the occasion is made up of one single food, the prefilled text will be the name of the food rather than the occasion. For example, if the SP ate only a hamburger for lunch, then the probe would read:

“Did you eat/drink this 12:00PM hamburger at your home?”

It is possible that respondents may remember more foods as they think about the source of the food and where it was eaten. In this case return to the RFL by pressing F10, and record the food in the next available RFL line.

Once you have asked the location for an occasion, you will ask the Between Interval Probe to determine if any food was eaten between the occasion you just collected and the next occasion reported.

6.7.7 Between Interval Probe

This probe reviews the period between one occasion and the next and asks if the SP had any other foods/beverages between the two occasions (Exhibit 6-84).

Exhibit 6-84. Between interval probe screen

Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE

Forms Answer Navigate Options Help

Intake Sorted_RFL

Sample (58, M), E1.001.IN.18.001 (301) 555-1515

Did you have anything between your breakfast and 3:00 PM when you had your Pbj sandwich?

1. YES

2. NO

RECBetweenIntervalPro

RECLastOccToMidnt

If the respondent remembers a food at this interval that was eaten **during** this interval, you will enter “1” for Yes and the system will take you back to the RFL. After recording the foods on the RFL, the AMPM will take you to the detail and amount probes. If the respondent remembers a food at this interval that was eaten later, the instrument will sequence the food so that you will collect the details

and amounts when you get to that time period in the interview. Foods that are remembered at this interval but eaten earlier in the day will be collected at the end of the interview, before you complete the Final Review of the 24-hour Dietary Recall. These foods are called “remainder foods” and will be discussed in Section 6.7.9.

6.7.8 Last Occasion to Midnight Probe

After you review the foods reported for the last occasion, you will ask the Last Occasion to Midnight Probe (Exhibit 6-85).

Exhibit 6-85. Last occasion to midnight probe screen

The screenshot shows a software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main content area is divided into sections. The top section shows "Intake | Sorted_RFL" and "Sample (52, M), E1.001.IN.18.001 (301) 555-1515". The next section contains the question: "Did you have anything to eat or drink between your 8:00 PM dinner and midnight last night?". Below the question are two radio button options: "1. YES" and "2. NO". At the bottom of the window, there is a section with the label "RECBetweenIntervalPro" and a text field containing "RECLastOccToMidnt" with a small white box next to it.

This probe covers the period between the last eating occasion reported and midnight. If a food(s) is remembered, the program will take you back to the RFL to add the foods. Follow the steps below.

- (1) Select "1" for "Yes." The AMPM will take you back to the RFL.
- (2) Enter food on RFL.
- (3) Collect or confirm the time and occasion.
- (4) Ask "Anything else?"
- (5) Type "XXX" and press ENTER twice.
- (6) Press END.
- (7) Collect details and amounts for each new food.

6.7.9 Collection of Remainder Foods

The USDA AMPM program orders foods chronologically throughout the interview, guiding the collection of detailed information about each food in the sequence in which the food was eaten. However, if a food was remembered at a point in the recall day that came before the time period you are collecting, the program will store the food until the end of the Recall portion of the interview. The stored foods are called "remainder foods." For example, if an SP remembered drinking orange juice at 7 AM for breakfast while you were reviewing the 1 PM lunch, the program would classify it as a remainder food.

If a remainder food is reported for an existing occasion (e.g., remembered drinking orange juice with waffles that have already been collected for 9 AM breakfast), you will only collect the details, amounts, and source for the food. However, if the remainder food is a new eating occasion (e.g., reported drinking orange juice at a time that was different from all other reported occasions), you will also collect the location of the occasion.

Remainder foods will be probed in the same way that all other foods are probed, beginning with the Continue/Redo Screen and ending with the Source question. However, the Interval review probes will not be asked for these foods because the period of time has already been covered.

6.8 Step 5: The Final Review Probe (FR)

The Final Review Probe (Exhibit 6-86) is the last opportunity the respondent will have to remember any new foods or drinks. If the SP remembers a food at this time, enter “1” for YES. The AMPM will take you to the RFL. Add the food to the next available RFL line. Collect the time and occasion for the food(s). Ask “Anything else?” probe. Type XXX on the next RFL Line and press ENTER twice. Press END. You will then collect details, amounts, and source for the food(s). If the food(s) creates a new eating occasion, you will also ask the location. Like remainder foods, the Interval Review probes will not be asked for these new foods.

Start Inbox - Microsoft Outlook NHANES05 Blaise Data Entry Desktop 4:42 PM

After you have administered the Final Review probe, continue with the usual intake question.

6.9 Intake Health-Related Questions

The Intake Instrument includes a question that is asked at the end of each interview. The Phone Follow-up exam only asks about intake amount.

6.9.1 Usual Intake

The Usual Intake question is the only question that follows the 24-Hour Recall portion of the interview (Exhibit 6-87). This question asks the respondent to make a judgment as to whether the **amount** of food and drink reported in the interview was usual, much less than, or much more than usual.

Exhibit 6-87. Usual intake question screen

Blaise 4.7 Data Entry - Wrk29\vol2905\nhcstest\2007\Testing\Julie\Instruments\Intake

Forms Answer Navigate Options Help

Intake Sorted_RFL Navigation_Help

123 (22, M), 17.001.IN.01.009 (1) -

Was the amount of food that you ate yesterday much more than usual, usual, or much less than usual?

1. MUCH MORE THAN USUAL

2. USUAL

3. MUCH LESS THAN USUAL

RECUusualAmount

RECTapWtrSource

RECTapWtrSourceOS

Respondents may have difficulty deciding whether the intake reported was really different from usual. Don't lead the respondents - let them decide. If they ask you to define the terms, just repeat the question with slight emphasis on the word **amount**. Remind them that it is their judgment.

After you select the response for the amount question, press ENTER to continue.

The closing screen for the phone follow-up interview is as follows (Exhibit 6-88).

Exhibit 6-88. Final Dietary Recall screen

6.10 Dietary Recall Section Status

This screen (Exhibit 6-89) indicates the status of the Dietary Recall section of the interview. When you arrive at this screen, the interview status will indicate “Partial,” “Not Done,” or “Complete.”

If the status is “Complete,” continue to the Supplement and Antacid Section.

Exhibit 6-89. Dietary Recall section status screen

If the status is “Partial” or “Not Done,” a reason must be selected from the drop-down menu in the Comments field.

The choices in the Comments field are:

- | | |
|-----------------------|---------------------------|
| Safety exclusion | Interrupted |
| SP refusal | Proxy no information |
| No time | Needs DR (Data Retrieval) |
| Physical limitation | Other, specify |
| Communication problem | |
| Equipment failure | |
| SP ill/emergency | |

If you choose “Other, specify,” the “Other” field will open (Exhibit 6-90) and you must type an appropriate comment.

Exhibit 6-90. Dietary Recall section status screen with comment codes

This completes the Dietary Recall portion of the exam.

6.11 The Supplement and Antacid Section

After you have confirmed the status of the dietary intake, you will continue the interview with the Supplement and Antacid use section. Details for collecting supplement and antacid recall data are provided in Chapter 7.

6.12 The Post-Recall Section

After completing the Supplement and Antacid Section Status screen for that section the Post-Recall for the interview will come next. This just involves one screen for the PFU interviews.

6.12.1 Observations Screen

For the Phone interview the Post-Recall Evaluation Screen is the only post recall screen. It is a data entry screen with four questions for you (the interviewer) to complete (Exhibit 6-91). You must answer all the questions on this screen before going to the status screen.

End of Section Close Exam Finish

Ready MEC Layer: 4/18/01 Application: Ver 9.10.17B Not connected to Coordinator 01:04 PM

The first question asks you what language was used for the interview. The response categories include “English,” “Spanish,” “English and Spanish,” and “Other.” You can select the appropriate option by typing the first letter of your choice (e.g., “S” for Spanish). For the “English and Spanish” choice, enter “E” two times. You can also click on the down arrow to see the choices, and select one by pointing and clicking. If you select “Other” you must specify what other language was used in the following field which will become enabled.

The second question asks you who the main respondent was for the interview. That is, the SP, a proxy (e.g., a parent or grandparent), or a combination of the SP and proxy (e.g., when a parent assists a child). You may select one of the twelve options by typing the first letter of your choice, or you

may click on the down arrow to see the choices and select one by pointing and clicking. If you select “Other Specify” you must specify what other person was the main respondent.

Exhibit 6-92. Observations — Difficulty question

The screenshot shows a software window titled "Dietary: Stand:107 Session:107821 09/25/1999 01:30 pm - 05:30 pm". Below the title bar, there is a menu bar with "File", "View", "Utilities", "Reports", "Window", and "Help". The main content area is titled "Observations" and contains the following fields:

- What language was used for the interview? (Dropdown menu: English)
- Other language (Text input field)
- Who was the main respondent for this interview? (Dropdown menu: SP)
- Other, Specify (Text input field)
- Who helped in responding for the interview? (Dropdown menu: SP)
- Other, Specify (Text input field)
- Did you or the respondent have difficulty or any comments about this interview? (Dropdown menu: Yes)
- What was the reason for this difficulty or comments about the interview? (List of checkboxes):
 - Did not understand question
 - Did not prepare foods
 - Foods were eaten away from home
 - Not familiar with measuring foods
 - Did not have food model booklet
 - Poor memory of foods eaten
 - Sick
 - Hearing Impairment
 - Language barrier
 - Telephone connection problems
 - Interruptions
 - Uncooperative / impatient
 - Distracted / Uninterested
 - Intake may be incomplete (explain in remark box)
 - Unreliable (explain in remark box)
 - Not ascertained
 - Other Specify

At the bottom of the window, there is a status bar with "Ready", "MEC Layer: 4/18/01", "Application: Ver 9.10.17B", "Not connected to Coordinator", and "01:04 PM".

The third question asks you who helped in responding for the interview. You may make your selection by simply typing the first letter of who helped of the thirteen choices including typing “N” for “No One.” If you answer “Other Specify,” the “Other Specify” field will open and you must enter the other person. If more than one person helped with the interview, select Other Specify and enter both persons.

The last questions ask whether you or the respondent had difficulty or any comments about the interview. If you select “Yes,” then a follow-on question is enabled. Here you must indicate the reason for the difficulty or your comments about the interview (Exhibit 6-92). This is a Code All that Apply question so you can choose more than one answer. There are sixteen selections to choose from on the picklist or you may choose “Other Specify” and specify the reason. If you answer “Yes” and have indicated that the reason for the difficulty is either “Intake may be incomplete,” or “Unreliable,” you must specify the reason in the remark field that is enabled. If you feel the interview was difficult for more than one reason, select Other Specify and enter the reasons in the text field.

6.12.2 Post-Recall Section Status Screen

This screen (Exhibit 6-93) will automatically indicate that the section status is “Complete” if all of the questions in this section were answered. If you had to end the interview before completing any or all screens, the section status will indicate either “Not Done” or “Partial.”

If the screen indicates a “Not Done” or “Partial” status, you must enter a comment before finishing the interview. Comments include:

Safety exclusion	Equipment failure
SP refusal	SP ill/emergency
No time	Interrupted
Physical limitation	Proxy no information
Communication problem	

Exhibit 6-93. Post-Recall section status screen

The screenshot shows a software window titled "Dietary: Stand:107 Session:107401 08/14/1999 01:30 pm - 05:30 pm". The window contains a menu bar (File, View, Utilities, Reports, Window, Help) and a toolbar. Below the toolbar, the session information is displayed: "SP ID: 822920 Name: GUEST, KIM D Age: 1 months Gender: Female Date: 05/11/2001 Time: 12:42 PM". The main area is titled "Post Recall Section Status Screen". In the center, there is a "Status" section with three radio buttons: "Complete" (selected), "Partial", and "Not Done". Below the status section are two input fields: "Comments" (a dropdown menu) and "Other text" (a text box). At the bottom of the window, there are navigation buttons: "End of Section", "Close Exam", and "Finish". The Windows taskbar at the bottom shows the Start button, the application icon, and the system tray with the time "12:55 PM".

To close the interview, press the “Finish” button on the bottom of the screen.

7. SUPPLEMENT AND ANTACID COLLECTION

Dietary supplements have been collected in person, in the home of the survey participants, starting with NHANES III. SPs are asked about their use of vitamins, minerals, and other supplements in the past 30 days. Beginning in NHANES 1999, participants are asked about use of all dietary supplements (antacids and herbals). These are important to assess since a wide range of health and disease conditions are associated with total nutrient intake. Also important is the ability to collect this information in the same format and timeframe as the food and beverage intake (past 24 hours). This will allow researchers to improve the total nutrient intake estimations as well as examine associations by nutrient source such as from foods versus supplements.

You will collect supplement and antacid use for the previous day, similar to the collection of foods and beverages in the AMPM for all Primary SPs. This section has its own Section Status similar to the Recall and Post-Recall (Complete, Partial, or Not Done). It will follow the 24-Hour recall and is also in Blaise so it has many of the same characteristic as the AMPM. For example, to change the form language use the Hot key of F11 or go to the drop-down “Options” menu. Navigation also uses the same rules where the Tab key takes you to the next field and Shift+Tab will take you back a field. The arrow keys can also move you forward and back.

7.1 Basic Scenarios

There are two basic scenarios for SPs. Either the SP will have reported supplements and/or antacids in an earlier interview (either the Household interview in the past 30 days, or new supplements or antacids during the MEC dietary interview, or both), or they will have not reported any supplements or antacids prior to your interview.

- If the SP did report using any supplements/antacids, this information will display in a table (Exhibit 7-1) which will allow you to easily ask if they took it the previous day. After reviewing this list item by item, you will get a new screen probing for any additional supplements/antacids taken the previous day.
- If the SP did not report any supplements/antacids in any of the earlier interviews, then you will get a screen probing for any supplements taken the previous day. This is followed by a similar screen probing for any antacids taken the previous day.

The review and probing for supplements and antacids will be done individually. That is, you will first review the supplements list (if any), then probe for additional supplements. Then you will review the antacid list (if any), and probe for additional antacids.

DSA

John (25, M) Yr9.S218.V2 (301) 251-1500

The next questions are about your use of dietary supplements, vitamins, minerals, and herbals all day yesterday, Tuesday, between midnight and midnight. This includes prescription and over the counter dietary supplements. During the interview in your home and our exam center you reported taking CALCIUM.

Did you take this supplement yesterday, Tuesday, (between midnight and midnight)?

[CONTINUE ASKING ABOUT EACH SUPPLEMENT LISTED IN TABLE]

1. Yes
2. No

Supplements	Pick List	1st Nutrient Strength	2nd Nutrient Strength	Container Seen	Taken Last 24 Hours	Form Taken	Quantity Taken	Unit Taken	Unit Taken OS	Liquid/Powder
CALCIUM		600 MG		Yes	<input type="checkbox"/>					
VITAMINS A & D		1000 MG	200 MG	Yes	<input type="checkbox"/>					
VITAMINS A & D					<input type="checkbox"/>					
CM SUPER CALC				Yes	<input type="checkbox"/>					
WALGREENSA T				Yes	<input type="checkbox"/>					
VITAMIN C					<input type="checkbox"/>					

In this scenario, the SP reported taking six supplements. The script walks you through confirming each one individually and documenting if they were taken the previous day.

The first column of the response pane lists all the supplements in the review. In this case there are six. This is information coming from the Household and/or MEC dietary interviewer as they entered it in a text field. Therefore you may see spelling errors and other inconsistencies. We have made these entries in all capital letters as an indicator that this is data that came from the Household and/or MEC interview.

The next column is the Pick List. For the data imported from the household or MEC, this column will be blank. The third and fourth columns have the supplement strength information, if any. The fifth column indicates whether or not the Household interviewer saw the container of the supplement. This gives you a sense of confidence that we have correct data. If the container was seen, you will not have to ask the form of the supplement, as we are confident of the form entered by the HH interviewer and you will only need to verify the form. We do ask SPs to bring containers with them to the MEC for new supplements that they began taking since the household interview. However, we have no data entry column for the MEC dietary interviewers to indicate they saw their container. They leave a note in the remarks when they see the container, but this note is not carried over to you in the phone application.

If you answer “Yes” to confirm use the previous day, you will verify the form (Exhibit 7-2) and then ask the amount or quantity taken (Exhibit 7-3). Once you confirm the form, the unit (unit taken) will be auto-filled for you and you will go on to the next supplement reported.

Exhibit 7-2. Form confirmation

The screenshot shows the Blaise 4.7 Data Entry software interface. The window title is "Blaise 4.7 Data Entry - C:\USIS\DSA\DSA". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". The toolbar contains icons for save, print, help, and other functions. The main area displays the following information:

DSA |
 John (25, M) Yr9 S218 V2 (301) 251-1500
 Was CALCIUM 600 MG a capsule? [CAPSULES INCLUDE TABLETS, PILLS, CAPLETS, SOFT GELS, GEL CAPS, VEGICAPS, AND CHEWABLE TABLETS]

Below the question are two radio button options:
 1. Yes
 2. No

At the bottom, there is a table with the following columns: Supplements, Pick List, 1st Nutrient Strength, 2nd Nutrient Strength, Container Seen, Taken Last 24 Hours, Form Taken, Quantity Taken, Unit Taken, Unit Taken OS, and Liquid/Powder.

Supplements	Pick List	1st Nutrient Strength	2nd Nutrient Strength	Container Seen	Taken Last 24 Hours	Form Taken	Quantity Taken	Unit Taken	Unit Taken OS	Liquid/Powder
CALCIUM		600 MG		Yes	1					
VITAMINS A & D		1000 MG	200 MG	Yes						
VITAMINS A & D										
CM SUPER CALC				Yes						
WALGREENSA T				Yes						
VITAMIN C										

Exhibit 7-3. Quantity taken

Supplements	Pick List	1st Nutrient Strength	2nd Nutrient Strength	Container Seen	Taken Last 24 Hours	Form Taken	Quantity Taken	Unit Taken	Unit Taken 05	Liquid/Powder
CALCIUM		600 MG		Yes	1	1		1		
VITAMINS A & D		1000 MG	200 MG	Yes						
VITAMINS A & D										
CM SUPER CALC				Yes						
WALGREENSA T				Yes						
VITAMIN C										

The form verification question will not come up for supplements where the containers were not seen, for new supplements that you have recorded, or for antacids. When you are verifying the form of a reviewed supplement, if the SP says “No,” the program will open a new line to enter the supplement taken. The assumption is that if the supplement form is not the same as it was in the Household interview, that the SP is likely taking a different supplement altogether. So the program opens a new line in the review, and you follow the procedures for entering a new supplement.

Typically, when you are reviewing a supplement form, you just ask “How much did you take?”, enter the number, and move on to the next supplement. However, for Packages/Packets, Liquid, Gel, Powder, and Granules, entering just a number for the quantity is not enough information. For example, if the form is “Liquid” and you ask “How much did you take?” the response will be a number and a unit, like 2 teaspoons. Thus, the program opens the Form/Unit screen for you to enter the unit. Depending on the form you are confirming, the unit screen is limited to only appropriate responses. For example, if the form is “Liquid,” the unit “gumballs” is not a response option.

The subsequent supplements (Exhibit 7-4) follow in the same format. You will go through each one verifying the form and entering the number taken. If the supplement was not taken the previous day, the program takes you on to the next supplement in the review list.

All day yesterday, Tuesday, between midnight and midnight, did you take any other vitamins, minerals, herbals or other dietary supplements? Include any prescription and over the counter dietary supplements.

[\[REFER SP TO SUPPLEMENT HANDCARD\]](#)

1. Yes

2. No

DSA060

7.2 Recording Other Supplements

If the SP reports taking a new supplement, you will need to enter the new supplement in the supplement table as shown in Exhibit 7-6.

This screen asks for the new supplement name. You will want the SP to read from the label and then enter what the SP says verbatim. The interviewer instruction text in teal will help you with probing.

When you are **reviewing** supplements and antacids, you do not have the ability to enter any “new” data. It is only during this recording section of the program that you are able to enter a new or additional supplement or antacid. The exception mentioned earlier is when you answer “No” to the form.

Exhibit 7-6. New supplements

The screenshot shows the Blaise 4.7 Data Entry software interface. The window title is "Blaise 4.7 Data Entry - C:\ISIS\DSA07b\DSA". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". The toolbar contains icons for file operations and navigation. The main area displays the following text:

JOHN (25, M) Yr8.s228.v1 (301) 251-1500

Can you please locate the containers for all the dietary supplements you took? I will wait while you get them.

Can you please read to me all the words on the front label?

[REPEAT UNTIL ALL SUPPLEMENTS HAVE BEEN REPORTED]

[PROBES: Record the name. Use name probes.]

Multivitamin and/or Multimineral:
What is the brand name?
Did it also include minerals like iron, zinc, or calcium?
Iron only
Was it a special type? (silver, women's, men's, prenatal, liquid)

Single / double nutrient:
What is the brand name?
How much (ingredient name) was in it? (or what was the strength of X)

Other supplement type:
Please describe the label name or type of supplement
What is the brand name?]

At the bottom, there is a table for recording supplement data:

Supplements	Pick List	1st Nutrient Strength	2nd Nutrient Strength	Container Seen	Taken Last 24 Hours	Form Taken	Quantity Taken	Unit Taken
One A Day					1			

The Windows taskbar at the bottom shows the Start button, several open applications (Inbox, manual, C7-Pho..., WBT, C:\WIN..., Blaise 4..., Blaise ...), and the system clock showing 12:25 PM on 10/10/08.

Once you've entered the supplement information in the text field, then record the quantity taken and unit/form taken. The screens shown in Exhibits 7-7 and 7-8 display for you to select quantity and then enter the unit/form of the supplement.

7.3 Antacid Data Collection

After collecting the supplements, you move on to collect the antacids. If the SP reported taking antacids in the Household/MEC dietary interview, a list will appear in a table similar to the supplements (Exhibit 7-10). In this case there were two antacids reported. You will follow the same protocol, asking if each antacid on the list was taken the previous day. If so, you will record the quantity and unit/form.

Exhibit 7-10. Antacid review

The screenshot shows the Blaise 4.7 Data Entry interface. At the top, the window title is "Blaise 4.7 Data Entry - C:\MSIS\DSA\DSA". Below the title bar is a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". A toolbar contains various icons for file operations and navigation. The main content area is yellow and contains the following text:

John (25, M) Y19.S218.V2 (301) 251-1500

The next questions are about your use of non-prescription antacids. During the interview in your home you reported taking TUMS LASTING EFFECTS.

Did you take this antacid yesterday, Tuesday, (between midnight and midnight)?

[CONTINUE ASKING ABOUT EACH ANTACID LISTED IN TABLE]

1. Yes
2. No

Antacids	Pick List	1st Nutrient Strength	2nd Nutrient Strength	Container Seen	Taken Last 24 Hours	Form Taken	Quantity Taken	Unit Taken	Unit Taken OS	Liquid/Powder
TUMS LASTING I				No	<input type="checkbox"/>					
ROLAIDS					<input type="checkbox"/>					

If no antacid data was reported in the Household/MEC dietary interview, you will get a simple probe to see if any were taken the previous day.

After verifying and/or entering all the previously reported antacids, the next screen (Exhibit 7-11) probes for any additional antacids. You must refer the SP to the Antacid hand card. Just as with the supplements, a “Yes” response will prompt you to record all that are reported.

Exhibit 7-11. Any other antacids?

7.5 No Antacids Reported in the Past 30 Days

If the SP did not report any antacids in the Household or MEC dietary interview, this screen will come up asking about use of antacids the previous day (Exhibit 7-15). You will need to refer the SP to the Antacid hand card. A “Yes” response will take you on to record the antacid and a “No” response will conclude the section.

Exhibit 7-15. Antacids taken yesterday

Blaise 4.7 Data Entry - C:\SIS\DSA\DSA

Forms Answer Navigate Options Help

DSA |

John (25, M) Yr9.S218.V2 (301) 251-1500

The next questions are about your use of non-prescription antacids. All day yesterday, Tuesday, between midnight and midnight did you take any antacids?

[REFER SP TO ANTACID HANDCARD]

1. Yes
 2. No

DSA005

For SPs that did take an antacid yesterday, a screen similar to the supplement screen appears (Exhibit 7-16) where you will record the name of the new antacid in a text field, find a match for it on the Pick List, then enter the quantity taken and the form/unit taken.

Exhibit 7-16. Recording new antacids

The Pick List will come up as you type, similar to the MFL in the AMPM; you can filter by TriDrugName or:

Alphabetically. However, you will need to be very careful in attempting to get an exact match to your text field entry.

NOTE: It is important that if you cannot find an **exact match** to select ****Product not on list**.

If you open a line in error by moving beyond the 1st column, and do not want to enter a new/additional supplement or antacid, type “error” in the field of the 1st column (the text field) and hit “Enter.” This will remove the newly inserted line.

If the SP reports an antacid or supplement where the unit is milliliters, tablespoons, teaspoons, cans, grams, cups, scoops, cc's, capfuls, mgs, units, gulps, ounces, or packages, a followup question is asked. This will only occur for new supplements and antacids, or reviewed supplements and antacids where the container was not seen. You are not expected to memorize this list, but as an aid we wanted you to understand the instances when you will see a followup question: "Was this a liquid or powder?"

If the SP reports a unit or form of a supplement or antacid that is not on the list, you have the option on entering "91" for Other, specify. If you select "Other, specify," a text field will open where you will need to enter the unit/form.

7.6 Hand Cards

We have three hand cards for this section (Exhibit 7-17). First we have a two-sided hand card. Each language has been printed separately, so that we have an English card with Supplements on one side and Antacids on the back, and a Spanish card with Supplements on one side and Antacids on the back. The MEC dietary interviewers will be providing the SP with both language versions of the cards to take home with their Food Model Booklet and a bag that has their cups, spoons, ruler, etc. The other hand card shows photo images of supplements to assist SPs in an understanding of what we are referring to when we ask about dietary supplements. It is also two-sided, with English on one side and Spanish on the other. During the Phone Follow-up interview you will want to ask the SP to have these cards on hand to refer to.

Exhibit 7-17. Supplement and antacid hand cards

7.7 Edits

We have two edits programmed for this section of the interview (Exhibit 7-18). A soft edit will come up if you enter a quantity greater than 9. Select “Goto” to change the quantity, or “Suppress” to continue. “Close” will keep you in the quantity field.

Exhibit 7-18. Soft edit

The screenshot shows a data entry window titled "Blaise 4.7 Data Entry - C:\MSIS\DSA\DSA". The main window contains a question: "Between midnight and midnight, how much did you take?" with a prompt "[ENTER THE NUMBER]". A dialog box titled "Action Signal" is overlaid, asking "YOU SAID YOU TOOK 11, IS THAT CORRECT?". Below the dialog box is a table with columns "Questions involved" and "Value". The table contains one row: "DSTableReview.DSBlock[4].DSA045" with a value of "11". At the bottom of the dialog box are buttons for "Suppress", "Close", and "Goto".

Questions involved	Value
DSTableReview.DSBlock[4].DSA045	11

Also an edit will display if you answer “Yes” to the question asking if the SP took any other supplements/antacids, and then failed to enter the supplement/antacid on the grid.

Exhibit 7-19. Hard error

The screenshot shows a "Hard Error" dialog box with the message: "YOU MUST COLLECT INFORMATION FOR AT LEAST ONE SUPPLEMENT OR BACK UP AND ANSWER 'NO' TO DSA060." Below the message is a table with columns "Questions involved" and "Value". The table contains one row: "DSTable.DSBlock[5].DSA010" with a value of "Yes". At the bottom of the dialog box are buttons for "Suppress", "Close", and "Goto".

Questions involved	Value
DSTable.DSBlock[5].DSA010	Yes

8. ADDITIONAL INTAKE PROCEDURES

This chapter discusses procedures that are specific to the Dietary Recall interview. The procedures include:

- Conducting proxy and assisted interviews;
- Interviewing children;
- Data retrieval;
- Documenting special situations such as skipped meals, missing meals, fasting SPs, and breast-fed infants;
- Referring to foods previously reported by SP or other HH member;
- Misreporting primary foods;
- Adding or misreporting additions;
- Recording information when program limits are activated (40+ foods and excess accessions to categories); and
- Collecting water reported during the intake.

8.1 Proxy and Assisted Interviews

Proxy and assisted interviews will be conducted primarily on child SPs. However, there may be situations when you will need to conduct proxy or assisted interviews for adult SPs who cannot report for themselves because of physical or mental limitations.

As shown in the following table (Exhibit 8-1), proxy interviews will be conducted for all child SPs under 6 years of age. Interviews for child SPs between 6 and 8 years of age will also be conducted with proxies, but the child must be present to assist the proxy during the interview. Assisted interviews will be conducted with child SPs 9 to 11 years old. SPs in this age range will be asked to provide their own data assisted by an adult household member (referred to as the assistant). The preferred proxy/assistant is the person most knowledgeable about what the SP ate the day before the interview.

Exhibit 8-1. Table of proxy and assisted interviews

SP Age	Interview	Adult Present	Child Present
<6 yrs	Proxy	Yes	No
6-8 yrs	Proxy/Assistant	Yes	Yes
9-11 yrs	SP/Assistant	Yes	Yes
12-15 yrs	SP	No	Yes

8.1.1 Proxy Interviews with Child SPs Under 9 Years of Age

There are two types of proxy interviews for children in this age group: (1) an interview where the proxy is the sole respondent, and (2) an interview where the child SP assists the proxy. A proxy will always respond for children under the age of 6, as we assume that they cannot reliably report for themselves. A proxy will also be the primary respondent for children between 6 and 8 years of age. However, because children in this age group can often contribute useful information about meals eaten away from home, the interview will be conducted with the child present to assist in reporting intake information. The proxy for children under 9 years of age may be the parent, grandparent, baby-sitter, or any other person knowledgeable about the child's intake. If the child has more than one caregiver, several individuals may need to contribute to the Intake data.

It is likely that you will need to collect information from children between 6 and 8 years of age about what they ate in the school cafeteria, at a day-care center, or at a babysitter's or some other caretaker's place. It may be necessary to collect not only information about school lunch, but also breakfast and after-school snacks.

If the preschool child has a meal(s) outside the home, the proxy or other family member may be able to tell you what foods were sent with the child, but probably not what foods were eaten. Be patient and persistent in trying to collect as much information as possible from the sampled child, if the proxy cannot be of assistance.

As with the standard introduction, explain the information you need, and define the time frame for the proxy. Since infants frequently have feedings during the night, it is important that the proxy understands the period of time. Use the Yesterday's Intake hand card in the front of the Food Model Booklet to reinforce the time period.

8.1.2 Assisted Interviews with Child SPs 9 to 11 Years Old

Our procedures assume that children between 9 and 11 years of age are capable of self-reporting their intake, but to collect complete and accurate information, they would benefit from the assistance of an adult knowledgeable about their intake.

The child should try to answer all of the intake questions and the health-related questions. If the child and assistant provide conflicting information, give them an opportunity to reconcile the response on their own. If they cannot, record the **SP's response** on the intake grid and proxy comments in the Remark Box (F6 function key).

8.1.3 Proxy or Assisted Interviews with Adults Unable to Report for Themselves

You may need to interview some respondents older than age 11 who are not capable of responding for themselves due to physical or mental limitations. In these cases, an acceptable proxy or assistant would be the person most knowledgeable about the respondent's food consumption.

8.2 Interviewing Children

An adult (18 years or older) should be present to conduct an interview with a child SP under 16 years old. The age and ability of the child will determine how much of the telephone interview you conduct with the child. Following are the procedures to follow for each age group.

- **SPs under 6 years old** – The entire interview will be conducted with the proxy. The child does not need to be present. However, if the child is present for the interview, the proxy may refer questions to the child.
- **SPs 6-8 years old** – The proxy will be the primary respondent, but the child SP must be present. If appropriate, you may conduct part of the interview with the child SP. Begin the interview with the proxy. If the proxy feels the child can better respond to the Quick List or answer the food probes, have the child join the interview. When you feel you have obtained all the information the child can provide, direct your questions to the proxy.
- **SPs 9-11 years old** – The child SP will be the primary respondent, but will be assisted by an adult. Begin the interview with the child by asking the Quick List. After the

child reports the Quick List, address the next statement to both the child and the assistant: Say something like “Now I’m going to ask you specific questions about the foods and beverages we just listed. When you remember anything else you ate or drank as we go along, please tell me.” Invite the assistant to participate in the interview and encourage the assistant to help the child report completely and accurately.

Use your judgment throughout the interview to determine whether the information you are obtaining would be more complete, or the interview would go more smoothly (or quickly), if you were interviewing the assistant. In that case, ask to speak to the assistant.

- **SPs 12-15 years old** – The child SP will be the primary respondent but an adult should be present while the SP is being interviewed.

Interviews with young children can be either pleasant and amusing encounters, or tedious and exhausting experiences. How you conduct the interview can affect both the quality of the interview and the interaction itself. Following are some tips to remember when interviewing children.

- Use child-related events and terms when probing. For example, if a child refers to an activity such as gymnastics or baseball when reporting foods in the Quick List, follow through with that activity when you get to the descriptive probes (e.g., “*Tell me about that juice you said you had before baseball practice.*” rather than “*You said you had some juice at 3 o’clock.*”).
- If children have difficulty recalling foods on the Quick List, help them think through the day by asking about where they went and what they did. Then ask whether or not they ate or drank anything. For example, you might ask a child, “*Where did you go right after school yesterday?*” If the child says something like “*to my friend’s house,*” ask an orientation question such as “*What did you do there?*”. Then ask, “*Did you eat or drink anything while you were at your friend’s house?*”
- Adult approval or disapproval can easily influence children, so you must encourage them to participate while remaining completely neutral.
- Keep your sense of humor and enjoy the conversation. It can be quite delightful.

8.3 Data Retrieval Procedures

If the SP or proxy/assistant cannot provide enough descriptive information about the foods, or the quantity eaten, the data may need to be collected from someone outside the household. This section describes the procedures for identifying and documenting missing data that needs to be retrieved from an outside source.

8.3.1 Data Retrieval Criteria

Missing dietary data will be retrieved on two groups of SPs:

- SPs under 12 years old, and
- SPs over 12 years old requiring proxy or assisted interviews.

For SPs described above, the data will be retrieved for the following situations:

- **Eating occasion reported but no foods.** An eating occasion is reported, but **not** the individual foods or beverages consumed at the occasion. For example, a mother may know that a child ate lunch at daycare, but may not know what the daycare provider served. Data should be retrieved for the individual foods and amounts.
- **Eating occasion reported with some foods.** An eating occasion is reported, but only **some** of the individual foods or beverages in the occasion are recalled. For example, a mother may know that her child's school served a hot dog for lunch, but may not know what else was served. Data should be retrieved for the other foods and amounts.

For SPs described above, the data will **NOT** be retrieved for the following situations:

1. When a food is reported that is **not** a part of a missing meal, but the details cannot be recalled. For example, milk is reported, but not the kind of milk.
2. When a food is reported that is not a part of a missing meal, but the amount cannot be recalled.

8.3.2 Flagging Eating Occasions for Data Retrieval

You will flag an eating occasion for data retrieval if the SP or proxy respondent reports an occasion but cannot report ALL OF THE foods consumed for that occasion. The procedures you use to flag the occasion for data retrieval will depend on whether the respondent reported any foods for the occasion.

Reported occasion but no foods. If the SP or proxy respondent reports an occasion (e.g., “school breakfast,” “school lunch”), but cannot report what the SP ate for the occasion, follow the steps below:

1. **Record the eating occasion during the QL pass.** From the MFL pick “school breakfast,” “school lunch,” “unknown meal,” or some other occasion that describes the meal.
2. **UNKNOWN Food category.** When you get to that occasion in the interview, the program will automatically link you to the Unknown food category. The first question you will read will ask the SPs if they can tell you what they had for that occasion (Exhibit 8-2). If the respondent reports “Yes” enter “1” to go back to the RFL and enter the foods. If the respondent reports “No,” enter “2” and continue.

Exhibit 8-2. Unknown food category screen – School breakfast

Can Janice tell me what Janice had for the School breakfast?

1. Yes, return to the RFL to enter foods

2. No, foods need data retrieval

The next screen (Exhibit 8-3) asks the amount eaten only for school breakfast and for school lunch, not for other responses. Notice the interviewer instruction that tells you to record what portion of the meal was eaten. While children may not be able to tell you what they ate, they can often tell you whether they ate it all. This is a text field so you will type in the text “ate all” or “1/2,” etc.

Exhibit 8-3. Unknown food category screen – School meal amount eaten question

XX(15, F). 12.001.IN.01.002 (11) 999-7890

School breakfast, 7:00 AM, breakfast

How much of this school meal did you eat?

[DOCUMENT WHAT PORTION OF THE MEAL WAS EATEN - ALL, HALF, A THIRD, ETC.]

Type in 'ate all' or 1/2, etc.

BStart 1 IncludeInIntake UnkFoodAmt

ameAsInstruction UnkSchoolMealAmt

Once you have entered the amount, do the following:

- (1) Arrow back to the category Start screen and change “1” (Include in Intake) to “3” (Needs Data Retrieval) and press “End” to get to the Source question;
- (2) Ask the Source question; and
- (3) Continue with the interview.

Example: A child SP reports “school breakfast” during the QL pass. When you ask the details about “school breakfast” the respondent cannot remember any foods. Flag “school breakfast” for data retrieval and continue with the interview.

Reported eating occasion on QL, then reported some, but not all, foods for the occasion. If the SP or proxy respondent cannot report **all** the foods the SP ate for the reported occasion, follow the steps below:

1. **Record the eating occasion during the QL pass.** From the MFL pick “school breakfast,” “school lunch,” “unknown meal,” or some other occasion that describes the meal.
2. **UNKNOWN Food category.** When you get to that occasion in the interview, the program will automatically link you to the Unknown food category. The first question you will read will ask SPs if they can tell you what they ate for the occasion (Exhibit 9-4). When you enter “1” for “Yes,” the system will take you back to the RFL to add the foods.

Exhibit 8-4. Unknown food category screen – School lunch

Can Janice tell me what Janice had for the School lunch?

1. Yes, return to the RFL to enter foods

2. No, foods need data retrieval

3. **Ask “anything else.”** After you enter the remembered foods on the MFL, ask “anything else.” (See Exhibit 8-5)

Exhibit 8-5. RFL when remembers foods in school meal

[IF SP REMEMBERS A NEW FOOD, USE COMMENT FIELD ONLY IF SP PROVIDES DETAILS.]
 [ASK OR CONFIRM BOTH TIME AND OCCASION FOR EACH FOOD BEFORE LEAVING THE RFL SCREEN.]

	Food Name	Time	Occasion	Occasion, OS
Food[1]	School breakfast	7:00AM	1	
Food[2]	School lunch	11:30AM	2	
Food[3]	Snack	3:00PM	6	
Food[4]	Hamburger	11:30AM	2	
Food[5]	Unknown meal	11:30AM	2	
Food[6]				

Remembered food (points to Hamburger)

Remembered foods (points to Unknown meal)

If the respondent indicates that the SP had more foods than were reported for that occasion, but doesn't know what they were, do the following:

- (1) Type in "unknown meal" on RFL along with the time and occasion.
- (2) Enter "XXX," press enter twice, and END to continue.
- (3) When you get to the "unknown meal" category, enter "1" (Continue) on the Continue/Redo screen, and "3" (Needs Data Retrieval) on the category Start screen.
- (4) Enter DK to the question about what foods were in the meal.
- (5) Enter 1-Enter-END to continue with the interview.

Example: During the QL pass a proxy mother reports her son ate "school lunch." When you ask the details about "school lunch" the SP reports he ate a hamburger. Mom says she knows he ate more than that for his school lunch. When on the RFL, add "unknown meal" and flag for data retrieval when you get to the details.

Reported foods on QL, then reported missing foods for same occasion. If an SP or proxy respondent reports, during the QL, eating a food for an occasion, and then states that other foods were also eaten, but cannot report the other foods, follow the steps below:

1. **Add the eating occasion to the RFL** (e.g., “school breakfast,” “school lunch,” “unknown meal”).
2. **UNKNOWN food category.** When you get to the unknown eating occasion, do the following:

- | |
|--|
| <ol style="list-style-type: none">(1) On the category Start screen enter “3” for Needs Data Retrieval;(2) Press “End” to exit the food details and ask the Source questions; and(3) Continue with interview. |
|--|

Example: A child SP reports pancakes on the QL for school breakfast. He later remembers that he ate other foods, but can’t remember the other foods. Enter “school breakfast” on the MFL and then flag the occasion for data retrieval.

8.3.3 Documenting Data Retrieval Source Information

If you entered any placeholders on the RFL (e.g., “school breakfast,” “school lunch,” “unknown meal”) you will be prompted at the end of the Dietary Recall interview to obtain information about who to call to retrieve the missing data. (See Exhibit 8-7 on page 8-12.) You will ask for the source name, location, and telephone number. The source may be a school, babysitter, daycare, or relative. Before asking for contact information you **must** get the proxy’s permission to conduct data retrieval with a source outside the household.

It is important to note that these questions are not driven by selecting “Needs Data Retrieval” for any food. Thus you may see these followup questions and falsely believe that you flagged a food for data retrieval when you have not remembered to go back to do so. If the food is not flagged you cannot go back and collect the missing data. The only way to be certain is to arrow up and see the placeholder in red (Exhibit 8-6). This confirms the food is flagged for data retrieval.

Exhibit 8-6. Confirming food is flagged for data retrieval

8:00AM, breakfast, School breakfast

[PRESS 1 AND ENTER FOR FOOD PROBES.]

1. CONTINUE

2. REDO

Data Retrieval Source Information. Data retrieval questions will only be asked when placeholders are entered on the RFL. If the Dietary Recall needs data retrieval, you will collect information about the data retrieval source(s) here.

The first screen (Exhibit 8-7) asks for a list of contacts who can answer the data retrieval questions. Up to five contacts can be entered. When you have entered all the contact names, press ENTER to continue.

Exhibit 8-7. Data retrieval source screen

Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE

Forms Answer Navigate Options Help

Intake Sorted_RFL

Sample (1, F), E1.001.IN.18.001 (301) 555-1212

Who should I talk to get the missing information about Sample's foods?

[COLLECT DATA RETRIEVAL CONTACT NAME(S) OR OTHER INFORMATION.]

Label	Data Retrieval	RECDRContactSource	<input type="checkbox"/>
RECDRContactName[1]	Mama Sue	RECDRContactSource0	
RECDRContactName[2]	Miss Josy	RECDRNameOfPlace	
RECDRContactName[3]		RECDRPhoneArea	<input type="checkbox"/>
RECDRContactName[4]		RECDRPhoneExchange	<input type="checkbox"/>
RECDRContactName[5]		RECDRPhoneLocal	<input type="checkbox"/>
		RECPhoneConfirm	<input type="checkbox"/>

The following screen (Exhibit 8-8) determines the relationship between the SP and the contact person. There are four possible responses. If the contact person is a relative or babysitter, the AMPM will continue on to ask the phone number of that person.

Exhibit 8-8. Data retrieval source screen – Relationship to SP question

The screenshot shows a software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The interface includes a menu bar (Forms, Answer, Navigate, Options, Help) and a toolbar with various icons. The main content area displays the question: "Does Mama Sue work at a school or child daycare, or are they a babysitter, relative, or something else?". Below the question are five radio button options: 1. SCHOOL, 2. CHILD DAYCARE (selected), 3. BABYSITTER, 4. RELATIVE, and 91. OTHER, SPECIFY. At the bottom, there is a data entry table with two sections: "Data Retrieval" and "ChildDaycare".

Label	Data Retrieval	REC DR Contact Source	ChildDaycare
REC DR Contact Name[1]	Mama Sue	REC DR Contact Source 0	
REC DR Contact Name[2]	Miss Josy	REC DR Name Of Place	
REC DR Contact Name[3]		REC DR Phone Area	
REC DR Contact Name[4]		REC DR Phone Exchange	
REC DR Contact Name[5]		REC DR Phone Local	
		REC Phone Confirm	

If the contact person is from a school or daycare, the AMPM will ask the name of the school or daycare place (Exhibit 8-9).

Exhibit 8-9. Data retrieval source screen – Name of school or daycare question

The screenshot shows the Blaise Data Entry application window. The title bar reads "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The menu bar includes "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main content area displays the question "What is the name of this school or child daycare?" in purple text. Below the question is a large white text input area. At the bottom of the window is a data entry form with the following fields:

Label	Data Retrieval	RECDRContactSource	2	ChildDaycare
RECDRContactName[1]	Mama Sue	RECDRContactSource0		
RECDRContactName[2]	Miss Josy	RECDRNameOfPlace	ma Sue's Playhouse	
RECDRContactName[3]		RECDRPhoneArea		
RECDRContactName[4]		RECDRPhoneExchange		
RECDRContactName[5]		RECDRPhoneLocal		
		RECPhoneConfirm		

Three separate screens (Exhibit 8-10) collect the contact person’s phone number (area code, exchange, and local).

Exhibit 8-10. Data retrieval source screen – Source phone number

The screenshot shows a software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The interface includes a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu is a toolbar with various icons. The main content area displays "Intake | Sorted_RFL" and "Sample (1, F), E1.001.IN.18.001 (301) 555-1212". A question asks "What is Mama Sue's phone number?" with a prompt "NEW NUMBER: () - [ENTER THE AREA CODE]". At the bottom, there is a data entry table with the following fields:

Label	Data Retrieval	RECDRContactSource	2	ChildDaycare
RECDRContactName[1]	Mama Sue	RECDRContactSourceID		
RECDRContactName[2]	Miss Josy	RECDRNameOfPlace	Mama Sue's Playhou	
RECDRContactName[3]		RECDRPhoneArea	301	
RECDRContactName[4]		RECDRPhoneExchange		
RECDRContactName[5]		RECDRPhoneLocal		
		RECPhoneConfirm		

Once the number has been entered, you will confirm the number and make any changes necessary (Exhibit 8-11).

Exhibit 8-11. Data retrieval source screen – Source phone number confirmation

Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE

Forms Answer Navigate Options Help

Intake Sorted_RFL

Sample (1, F), E1.001.IN.18.001 (301) 555-1212

[CONFIRM NEW TELEPHONE NUMBER]

NEW NUMBER: (301) 555-1515
Is this correct?

1. YES
 2. NO

Label	Data Retrieval	RECDRContactSource	2	ChildDaycare
RECDRContactName[1]	Mama Sue	RECDRContactSourceID		
RECDRContactName[2]	Miss Josy	RECDRNameOfPlace	Mama Sue's Playhou	
RECDRContactName[3]		RECDRPhoneArea	301	
RECDRContactName[4]		RECDRPhoneExchange	555	
RECDRContactName[5]		RECDRPhoneLocal	1515	
		RECPhoneConfirm	<input type="checkbox"/>	

The next data retrieval screen allows you to enter any comments that will assist in the data retrieval process. The AMPM system will ask these questions for each contact name reported.

If more than one food is flagged for data retrieval and more than one service is identified for contact, you will document the source to be contacted for each food in the comments box. You should also use the comment box to clarify any data retrieval information to be collected. The comment box is shown below (Exhibit 8-12).

Exhibit 8-12. Data retrieval source screen – Additional comments

The screenshot shows a software window titled "Blaise Data Entry - C:\Test-P2-Intake-Local\Instruments\INTAKE". The window has a menu bar with "Forms", "Answer", "Navigate", "Options", and "Help". Below the menu bar is a toolbar with various icons. The main area of the window displays "Intake | Sorted_RFL" and "Sample (1, F), E1.001.IN.18.001 (301) 555-1212". A large text area contains the prompt "[ENTER ADDITIONAL COMMENTS IF NEEDED.]". At the bottom of the window, there is a list of fields: "IECDRNameOfPlace", "IECDRPhoneArea", "IECDRPhoneExchange", "IECDRPhoneLocal", "IECPhoneConfirm", "RECDRNameOfPlace", "RECDRPhoneArea", "RECDRPhoneExchange", "RECDRPhoneLocal", "RECPhoneConfirm", and "RECDRComments". The "RECDRComments" field is highlighted with a dotted border and contains a small white text input box.

8.3.4 Data Retrieval Collection Procedures

When “needs data retrieval” is selected for any **food** during an interview, the record is flagged as “needing data retrieval.” A report is automatically printed immediately after the interview is closed, that contains a list of foods needing DR and the contact source information for that interview.

The telephone supervisor will assign you data retrieval responsibility on a daily basis. You should try to contact the source within 24 hours of the time the interview was completed. If it was completed on a Saturday, contact the source within 72 hours.

The record will be assigned a status code of “Partial” for the Dietary Recall section. To collect the missing data, you need to follow these steps:

1. Select Data Retrieval (DR) on the drop-down file menu at the initial dietary exam screen.
2. Use the DR report to obtain the telephone number to initiate contact with the source.
3. Launch the partial intake and scroll down to the first eating occasion needing DR. The food details will appear in RED.
4. Select “Redo” and then “Include in Intake” to access the food details. All details collected during the Primary exam will be filled in.
5. Collect the missing data.
6. Press “End” to exit the food’s details.
7. Scroll to the next food needing DR and repeat the process until all foods on the DR report have been addressed.
8. If at any time the DR contact cannot provide the necessary details, leave a remark (F6) describing why DR was not successful.
9. Close the intake. Note that the section status is now complete.

If you cannot contact the source in the time frames noted above, enter the case and navigate to the unknown eating occasion(s), select “Redo” and “Include in Intake.” Then press F6 to leave a remark in the remark box stating “Data Retrieval unsuccessful.”

8.4 Documenting Missing Meals (if Data Retrieval is Not Required)

If the Dietary Recall does not meet the guidelines for data retrieval and the SP can remember consuming foods and beverages at a particular meal, but cannot remember what was consumed, the meal is considered missing. You will record the missing meal by entering the eating occasion on the Quick List, for example “dessert” or “snack.” The program will link those terms with the Unknown Food category. If the SP cannot report the foods consumed, enter a question mark for “DK” and continue.

8.5 Documenting Skipped Meals

A missing meal is distinguished from a skipped meal. A skipped meal is a meal that the respondent might have been expected to eat or drink, but did not. For example, this would be if an SP reports eating no food before 1:00 in the afternoon. At any point in the interview you may access the Remark Box and record any information the respondent offers (e.g., “I didn’t eat breakfast.”), to indicate that a meal is not missing. Be careful not to suggest to SPs that they should have had a meal, or ask if they had a particular meal.

8.6 Documenting Fasts on the Recall Day

There may be times when a respondent reports fasting on the recall day. If this occurs follow the steps below:

- (1) Enter “Fasting” on the QL;
- (2) Proceed with the interview, asking the FFL probes; and
- (3) Ask health-related questions

8.7 Documenting Breast-fed Infants

When a proxy reports that an infant SP was breast fed, you will record the term “breast milk” on the QL and continue with the interview. Try to document every time the SP was fed (rather than

reporting the feedings as extended consumption). At the time and occasion pass, record the time the feeding began and code the occasion as “feeding – infant only” (code 8) – as you are not required to ask for an occasion name if the SP is under age 2. The program will not ask detail, amount, or source probes for “breast milk.” In addition, if “breast milk” is the only food in the occasion, the program will not ask the location question.

If a proxy reports that an infant is exclusively breast fed you do not need to read all the text on the Measuring Guide Instructions screen. You can simply read the first sentence and go to the next screen. (Now we’re going to fill in your list with more detail.) However, for bottle-fed infants the screen must be read since foods may be added to the bottle that may require the SP to report quantities using the guides.

Furthermore, if the infant was exclusively breast fed you may follow these steps:

1. On the Quick List in the FoodName column enter “breast milk” only one time and type “XXX” to continue.
2. Proceed to the Forgotten Food List screens and ask and answer all of the probes.
3. Highlight the Breast milk on the RFL and press F6 to enter a Remark. In the remark box enter all of the times the baby was nursed/fed.
4. At the Time and Occasion Pass enter the first reported time the infant was breast fed. Enter Feeding-infant only (“8”) for the occasion.
5. Enter “1” to continue. As stated above, you do not need to read all of the Measuring Guide Instructions Screen text. (“Now we are going to fill in your list with more details” for in-person interviews/ “When I ask how much you ate...” for phone interviews.)
6. Ask the Midnight to First Occasion Probe.
7. Read the Review of Event screen.
8. Reword the Last Occasion to Midnight Probe: “Did (NAME) have anything *else* to eat or drink between these feedings and midnight last night?” while noting the times documented in the Remark box.

8.8 “Same As” (Foods Previously Reported by the SP or Household Member)

To make the interview more efficient, you may refer to a previously described food in an SP’s intake or in another household member’s intake. To do this, you will go the Category Start screen (Include in Intake) and select “4” for “Same as.” Then, if other respondents in the household ate the same foods, the food coders can refer to the main meal preparer’s dietary record rather than you documenting an identical detailed description.

You may not determine that this food was eaten by another SP until you are into the category. In that situation you can back up to the Start screen and select “4” for “Same as.” Instructions and a text box will appear (Exhibit 8-13) that will prompt you for the following information:

- Eating Occasion or Time;
- Reference Person’s SP #; and
- 1st MEC, Phone Follow-up, 2nd MEC exam.

Exhibit 8-13. "Same As" screen

Intake	Sorted_RFL	Navigation_Help
MARCIA (17, F), Yr10.s233.v1		
Pizza, 12:00 PM, lunch, 12:00 PM		
[1. IF IN THIS PERSON'S INTAKE, RECORD: * EATING OCCASION OR TIME		
OR		
2. IF IN ANOTHER PERSON'S INTAKE, RECORD: * EATING OCCASION OR TIME * REFERENCE PERSON'S HOUSEHOLD ROSTER NUMBER * DAY 1 OR DAY 2		
REFER TO ANOTHER INTAKE ONLY IF YOU COLLECTED THAT INTAKE]		
FIBStart	<input type="text" value="4"/>	SameAs
SameAsInstruction	<input type="text"/>	

If you are referring to a food reported earlier in the interview, you will only need to document the time and occasion.

If you are referring to the Dietary Recall for another household member, you must also enter the reference SP's number. To access a roster of Household SPs and their respective SP numbers, press **Ctrl H**. A drop-down box will appear that includes SP number, name, age, and gender. Once you have entered the "SameAs" information, you must ask the additions and amount eaten probes for the food and then continue with the interview. You may only refer to another household member if you completed the interview that collected that information on the same day.

8.9 Procedures for Misreporting Foods

There are several situations during the interview in which you may have to misreport a food. The procedure for misreporting the food will depend on the reason for the misreport and when the misreport occurs.

There are three reasons you may need to misreport a food: the SP didn't eat a reported food on the recall day; the SP changed the time of the eating event while in the food details; or the food name didn't match the details reported by the SP. The procedures for misreporting each scenario are described below.

SP Did Not Consume Food on Recall Day. When a food on the RFL is incorrect because either the respondent mistakenly reported it or you entered it incorrectly, you must remove the food from the Dietary Recall. The procedures for removing the food depend on where the misreport occurs.

- **QL or Time and Occasion Pass:** Type "error" over the food name. "Error" can only be used to remove a food from the RFL during the Time and Occasion Passes. The program will not allow "Error" beyond this point and the food must be misreported as explained below.
- **Food Details Pass:** Arrow up to the category Start screen and select "Misreport." Press "1," enter, and "END" to continue.
- **After Collected Food Details:** Arrow up to the Continue/Redo screen and select "Redo." Select "Misreport" on the category Start screen. If it is a primary food, this procedure will misreport both the primary food and any additions collected with it. Press "1," enter, and "END" to continue. This can occur any time in the interview, including during the health-related questions.

Changing Time While Collecting the Food Details. If the respondent changes the time a food was consumed while collecting that food's details, the food must be misreported and re-entered on the RFL with the correct time.

1. Arrow up to the category Start screen and select "Misreport."
2. Press "1," enter, and "END," as instructed on screen, to continue to the next food.
3. Press F10 and type "rfl" to access the RFL.
4. Arrow down to the "XXX" and enter the food name with its corrected time and occasion. Remember to include any details already collected (to avoid repeating

questions a second time). (For example, if SP reported candy at 10 a.m. but changed the time to 2 p.m. after telling you it was a Milky Way bar in the details for the candy, enter “Milky Way bar” on the RFL with the new time.)

5. Press “END” to continue with the Intake. The re-entered food will now be collected at the appropriate time and occasion.

Changing Food Name or Prefilled Details. On occasion, a respondent will change the food name or kind while in the food details. Since the program prefills some details based on the RFL food name, **and** prefilled items cannot be changed, you must misreport the food and re-enter the corrected food name on the RFL. You will know you must misreport when the SP seeks to clarify their initial response once you are in the food details. For example, this would happen when the respondent reports “OJ” on the Quick List but remembers that it was “pineapple-orange juice” in the details when you asked, “Was the orange juice 100% juice?” Or, they could change a food such as sugar to sugar substitute when you ask, “How much sugar did you actually eat?” In each case, the food must be misreported and re-entered on the RFL. You will use the same procedure that is used to change time while collecting food details.

1. Arrow up to the category Start screen and select “Misreport.”
2. Press “1,” enter and “END,” as instructed on the screen, to continue to the next food.
3. Press the F10 key to access the RFL.
4. **Arrow down** to the “XXX” and enter the corrected food name with time and occasion.
5. Press “END” to continue with the collection of the food’s details.

8.10 Adding Remembered Additions

The procedures for adding remembered additions to the Dietary Recall are different from those for adding **primary** foods. While a remembered primary food can be documented by accessing the RFL and adding the food (discussed in Chapter 6), remembered additions must be tied to the appropriate primary food. For instance, if the respondent adds sugar to his coffee, the sugar must be added within the coffee details, not entered onto the RFL as a separate food. Thus, when the respondent remembers an addition to a primary food that was collected earlier in the intake, you must return to the primary food and add the addition there.

To add a remembered addition to a previously collected primary food:

1. Arrow up to the Continue/Redo) screen for the appropriate primary food.
2. Select “Redo” and then “Include in intake.”
3. Scroll down to the additions question. If the food already has additions, continue scrolling down to the first available ADDFoodName line and type in the remembered addition. If the primary food did not have previously reported adds, change the additions question from “No” to “Yes” and type in the ADDFoodName.
4. Press “END” to continue. The program will collect details for the remembered addition(s) and then continue on with the rest of the intake.

8.11 RFL IS FULL (Documenting 41 or more Reported Foods)

There may be situations when a respondent reports more foods than the RFL can store. The RFL can only hold 40 foods. It is made up of all the foods reported on the QL as well as all additions to primary foods and all misreported foods. When you try to enter a food that exceeds the 40-food capacity the program will instruct you on how to document the information. You will always record the information in a **Remarks box**, but where you record it depends on whether it is a primary food or an addition.

- **Primary food** – press **HOME KEY** and then F6 to open the remark box.
- **Addition to primary food** – type “Error” over the addition, go to **AMOUNT SCREEN** for primary food, and press F6 to open the remark box.

8.11.1 RFL IS FULL – Recording Primary Foods During the Dietary Recall

Any time you are in the AMPM application and you try to enter a primary food that exceeds the 40-food capacity, you will get the following edit:

RFL IS FULL

1. SELECT “Suppress” KEY TO SUPPRESS THE EDIT.
2. PRESS HOME KEY AND THEN F6 TO OPEN A REMARKS BOX.
3. ENTER TIME, OCCASION, NAME, DETAILS, AND AMOUNT. INCLUDE ADDS.
4. SAVE REMARK AND PRESS “END” TO CONTINUE.

After suppressing the edit and pressing the home key, the program will take you to the QL overview screen. All text will be grayed out except for an instruction that reads:

[IF COLLECTING INFORMATION ABOUT FOODS WHEN THERE IS NO MORE ROOM ON THE RFL, PLEASE ENTER THE FOOD NAME, TIME, OCCASION, DETAILS, AND SOURCE IN A COMMENT BOX (F6).]

8.11.2 RFL IS FULL – Recording Primary Linked Foods During the Dietary Recall

When a respondent reports a food that links to a different category during collection of the FIB details, and there are 40 foods on the RFL, a hard edit will appear. For example, if the respondent reported pasta on the QL but she says it was ravioli in the FIB details, the program will try to link to the ravioli (stuffed pasta) category. If there are already 40 foods on the RFL, there is no place to “list” the new category. Follow the instructions in the edit below:

RFL IS FULL.

1. PRESS “ENTER” AND SELECT “Misreported” AT category Start SCREEN.
2. PRESS 1, ENTER AND END.
3. PRESS **HOME KEY** AND THEN F6 TO OPEN A REMARK BOX.
4. ENTER TIME, OCCASION, FOOD NAME, DETAILS, AND AMOUNT. INCLUDE ADDS AND SOURCE INFO.
5. SAVE THE REMARK AND PRESS “END” TO CONTINUE.

You must **misreport** the original food (e.g., pasta) in order to leave the category. If you press the HOME KEY without misreporting the food, you will remain in the original category.

Since you will be entering the linked food details into the remarks box, they will not be documented on the RFL. Therefore, they will not appear on the review of event screens nor on the Sorted RFL.

8.11.3 RFL IS FULL – Recording Primary Foods While Collecting Health-Related Questions

If a respondent remembers primary foods while answering the health-related questions at the end of the Dietary Recall section of the interview **and** there are already 40+ foods on the RFL, the program cannot access the RFL to add the remembered foods. A Blaise program error message will appear when you press the F10 key and type in “rfl.”

“Tag not found or currently not on route.”

This error message will differ from those discussed above in that no instructions are given on the screen. However, the procedure is the same as described for primary foods:

1. CLOSE ERROR MESSAGE.
2. PRESS **HOME KEY** AND OPEN A REMARK BOX.
3. ENTER TIME, OCCASION, NAME, DETAILS, AND AMOUNT. INCLUDE ADDS AND SOURCE INFO.
4. SAVE REMARK AND PRESS “END” TO CONTINUE.

This procedure only applies to **primary** foods remembered in the trailer section. Any additions remembered at this point in the interview should be entered by arrowing back to the correct primary food and following the on screen instructions for remembered additions.

8.11.4 RFL IS FULL – Recording an Addition to a Primary Food

When a respondent reports an addition and you enter it in the addition field and hit ENTER, a hard edit appears. The edit says:

RFL IS FULL.

1. TYPE “Error” OVER ADD FOOD NAME.
2. GO TO **PRIMARY FOOD AMOUNT SCREEN** AND PRESS F6 TO OPEN A REMARK BOX.
3. ENTER ADD FOOD NAME, DETAILS, AMOUNT, AND SOURCE.
4. SAVE REMARK BOX AND PRESS “END” TO CONTINUE.

8.12 ACCESS DENIED (Reporting Food Details When Program Denies Access to Categories)

There is a limit to the number of times you can enter a food category to ask food probes. Some categories can only be entered 5 times, while others can be entered up to 10 times. The number of times a category can be accessed is dependent on how frequently, in our experience, the foods in the category are reported. For example, the vegetable category can be entered 10 times because it would not be uncommon for a vegetarian to report eating vegetables 10 times over a 24-hour period. On the other hand, the biscuit category can only be accessed 5 times since biscuits are not frequently consumed. The table below (Exhibit 8-14) lists the 38 categories that can be entered 10 times.

Exhibit 8-14. Table of food categories that can be accessed 10 times

Alcohol	Juice drinks/ades
Baby juice	Mayo/salad dressings
Breast milk	Milk
Bread	Mixed dishes
Butter	Nuts/seeds
Candy	Oil
Ready to eat cereal	Powdered beverage drinks
Cooked cereal	Pie
Coffee	Poultry
Cookies	Popsicles
Chips	Rolls, buns, bagels
Creamer	Soda
Condiments/sauces	Soup
Dry baby cereal	Sugar
Fish	Sweetener
Formula	Syrup
Fruit	Tea
Gravy	Vegetables
Jarred baby food	Water

Documenting Primary Foods and Additions When Access Denied. When access is denied to a food category you will follow procedures similar to when the RFL is full. When you enter “continue” on the Continue/Redo screen, a soft edit will appear:

NUMBER OF ACCESSIONS EXCEEDED FOR THIS CATEGORY

1. SELECT “Suppress” TO GO TO SOURCE QUESTION.
2. PRESS F6 TO OPEN A REMARK BOX.
3. IF FOOD IS A PRIMARY FOOD, ENTER NAME, DETAILS, AND AMOUNT.
IF FOOD IS AN ADD, ENTER NAME, DETAILS, AMOUNT, PRIMARY FOOD NAME.
4. SAVE REMARK AND CONTINUE.

Follow the instructions by suppressing the edit and asking the source question. Press F6 to open the Remark box and enter the foods details as described above. If the food is an addition, make sure you include the name of the primary food. If you forget any of the instructions you can pull them up by clicking on the Maximum Accessions tab that will be enabled when this occurs.

8.13 Water Tips

- Enter all water reported on the QL or as a remembered food.
- Collect the details in the Intake.
- When water is added to another food or beverage, enter it as “water as an addition” in the ADDFoodName field.

9. FLEXIBLE CONSUMER BEHAVIOR SURVEY

The Flexible Consumer Behavior Survey (FCBS) module was developed in collaboration with the Economic Research Service (ERS) of the U.S. Department of Agriculture (USDA) for inclusion in the National Health and Nutrition Examination Survey (NHANES).

The module is designed to collect information on people's knowledge, attitudes, and beliefs toward nutrition and food choices. Once integrated into the survey, data collected with this module can be linked to other NHANES components, allowing researchers to explore relationships between dietary intakes as well as nutritional biomarkers of the individuals and their knowledge, attitudes, and perceptions. Assessing such linkages and how the linkages change over time in various population subgroups will provide critical information not only to public health experts and policymakers, but also to the food industry and the growing food-away-from-home sector as well. Information gathered by the FCBS will contribute to the major NHANES objectives of studying the relationship between diet, nutrition, and health, as well as monitoring trends in risk behaviors and the prevalence of risk factors in population.

The Consumer Behavior Questionnaire (CBQ) has 59 questions that will be administered over the phone to SPs 16 or older. The questionnaire can be found in Appendix F of this manual. SPs 1+ who have a complete MEC dietary intake are eligible (this includes intakes waiting for data retrieval). Therefore, FCBS proxy respondents will be identified for SPs aged 1-15 years. Questions will be asked of one adult in the family and their responses will be linked to all the children (aged 1-15) in the family. The CBQ is expected to take about 15 minutes. The respondent for the CBQ will receive a check for \$15 as a token of appreciation.

9.1 Basic Scenario for Adult SPs

There are two paths to conduct the Consumer Behavior Questionnaire: to proceed after the Dietary PFU, or to schedule an appointment for later. There are two basic scenarios for adult SPs 16 years and older.

The two basic scenarios for participants who are 16 years and older are as follows:

- At the end of the PFU a script will come up introducing the FCBS and asking SPs to participate (Exhibit 9-1).
 1. If the SP agrees, you can launch the CBQ right then and there.
 2. If the SP does not agree, go on to the scheduling screen to schedule them for another day and time (Exhibit 9-16).

Exhibit 9-1. Decision screen

9.2 Basic Scenarios for SPs Aged 1 to 11 years

Participants aged 1-11 years typically have completed the PFU through a proxy/assistant. A question will display asking who completed the interview, meaning the Dietary PFU (refer to Exhibit 9-2).

Participants who are aged 1 to 11 years:

- A question will display asking who completed the interview (refer to Exhibit 9-2). If the Dietary PFU interview was completed through a proxy, as is typical for this age group, you will select “No” and then select the Dietary proxy (Exhibit 9-3). Then, a

series of questions will be asked to determine the Main Meal Planner (MMP) in the family. (See Section 9.4 and Exhibits 9-11 through 9-14.)

1. If the Dietary PFU proxy is an SP and he or she is identified as the MMP, then their data for the FCBS will be linked to all participants aged 1-15 years in this SP's home and no other FCBS interview is necessary. A decision screen will appear next for an SP Proxy (Exhibit 9-4).
2. If the Dietary PFU proxy is not an SP and is identified as the MMP, he or she will be selected as the FCBS proxy, as they have priority over other potential non-SP proxies. A decision screen will appear next for a non-SP Proxy (Exhibit 9-5).
3. If the Dietary PFU proxy is **not** identified as the MMP, the decision screen will display as follows (Exhibit 9-6). The screen is different for SPs and non-SP MMPs (Exhibit 9-7).

9.3 Basic Scenarios for SPs Aged 12 to 15

Participants aged 12-15 years typically have completed their own PFU. After indicating that the SP completed their dietary interview, the series of questions will be asked to determine the MMP in the family. The two basic scenarios are that the MMP is an SP or the MMP is not an SP.

Participants who are aged 12 to 15:

- If the MMP is an SP, his or her data for the FCBS will be linked to all participants aged 1-15 in this SP's home and no other FCBS interview is necessary (Exhibit 9-8).

- If the MMP is not an SP, the system will bring in a priority list of the names of the persons who are the MMPs and you will attempt to complete the FCBS with the first name on the list (Exhibit 9-9). A decision screen will appear next with a script asking to speak to the non-SP Proxy you selected (Exhibit 9-10).

9.4 Main Meal Planner Determination Questions

The Main Meal Planner (MMP) determination questions are asked for all SPs under the age of 16.

The MMP determination questions are as follows:

- Who is the person that does most of the planning or preparing of meals in your family (Exhibit 9-11)?
- Do you/Does he or she share in the planning or preparing of meals in your family with someone else (Exhibit 9-12)?

- Who is the person who does most of the shopping for food in your family (Exhibit 9-13)?
- Do you/Does he or she share in the shopping for food with someone else (Exhibit 9-14)?

NOTE: A priority list will be applied when more than one adult SP is identified as one of the family's MMPs. The system will select the SP for you.

Exhibit 9-19. Decision Screen

FCBS Non SP Proxy: Contact phone number:

Hello, Mr./Mrs MARY FONT, my name is Janice. I'm calling for the National Health and Nutrition Examination Survey to ask some questions about food and food shopping. The interview will take about 15 minutes and you will receive a check for \$15 as a token of appreciation.

When you call to do a scheduled FCBS interview, the respondent may or may not be available to do the interview. If the respondent is not available to do the interview, it is considered a broken appointment. If you call to try and do a previous broken FCBS appointment and the respondent is not available, it is also considered a broken appointment. In both cases in order for you to proceed past the Decision Screen, you must choose the “Broken FCBS appointment” from the drop-down list (Exhibit 9-20).

As mentioned above, there are only two instances when you can choose Broken FCBS appointment from the drop-down list. They are as follows:

1. When a FCBS interview is scheduled and the respondent is unavailable, and
2. When a FCBS interview is broken and the respondent is unavailable.

For any other instance that you try to choose “Broken FCBS appointment” from the drop-down list, you will get a message in a box stating that broken appointment may only be selected if there is scheduled or broken appointment (Exhibit 9-20).

Exhibit 9-20. Decision screen

9.6 Non-SP Proxy Guidelines

Once a FCBS proxy respondent has been chosen through the MMP determination questions (Section 9.4), if the respondent is not an SP, important guidelines must be followed. After the decision screen for proxy FCBS, you will have to read a non-SP consent script (Exhibit 9-21). At this point the non-SP may or may not decide to consent to the interview.

Exhibit 9-21. Non-SP consent script

Before we begin, I'd like you to know that participating in this interview is voluntary. You may choose not to answer any question you don't want to answer or stop at any time. We are required by federal laws to keep your answers strictly private. I can describe the laws if you wish. They guarantee that your answers will be used only for research. Your name will not be used. Also, in order to review my work, my supervisor may listen as I ask the questions. I'd like to continue now unless you have any questions.

[READ IF NECESSARY] 'The Public Health Service Act is Volume 42 of the US Code, Section 242k. The collection of information in this survey is authorized by Section 306 of this Act. The confidentiality of your responses is assured by section 308d of this Act and by the Confidential Information Protection and Statistical Efficiency Act.'

Was consent obtained?

If the non-SP decides to give consent and continues with the FCBS interview, the next screen will launch to the CBQ. You will read each question and statement verbatim. Once the CBQ is complete, you will follow the following steps:

- Answer the relation question.
- Answer the MMP determination questions again (for SP and non-SP proxies).
- Answer the age question.
- Answer the education question.
- Identify the gender of the respondent.
- Identify the language the interview was completed in (for SP and non-SP proxies).

- The next screen will be the Check Verification screen (Exhibit 9-22). If the proxy is not an SP, you will need to verify information to mail this respondent a check, as he or she will not be in our system.
- Read the non-SP consent (Exhibit 9-23).

Exhibit 9-22. Check verification screen

I'd like to verify your name and address so that we can mail the \$15 check. Is your name (READ NAME) and your address (READ ADDRESS)?

Verify the name and address of where to send the check

Name to appear on the check:

Mailing address where to send the check

Exhibit 9-23. Ending Non-SP Consent

Those are all the questions I have. I'd like to thank you on behalf of the National Health and Nutrition Examination Survey for the time and effort you've spent answering these questions.

If you have any questions about this survey, you may call our Medical Officer, Dr. Kathryn Porter toll-free at 1-800-452-6115. If you have questions about your rights as a survey participant, you may call the chairman of the Research Ethics Review Board at 1-800-223-8118.

Thank you again.

SPs that are complete or scheduled go straight to the Status screen. The Status screen appears in two situations:

1. When a FCBS interview is scheduled (Exhibit 9-24), and
2. After the FCBS interview is completed (Exhibit 9-25).

Exhibit 9-24. Status screen for scheduled FCBS

Exhibit 9-25. Status screen for completed FCBS

9.7 Scheduled FCBS Appointments

The Field Follow-Up Management System (FFMS) (Exhibit 9-26) will function exactly as it does for the PFU. If an FCBS is scheduled, FFMS will show who is scheduled with a dietary interviewer. If an adult SP has one or more children linked to them, they appear under the SP that is scheduled and will be grayed out with no links under them.

Exhibit 9-26. FFMS Schedule screen

The screenshot displays the FFMS Schedule screen. At the top, there are navigation tabs for Dietary, Hepatitis C, FFQ, PSA, Allergy, FCBS (selected), and HUC. Below these are sub-tabs: Contact Manager, Appointment Manager (selected), Reminder Calls, Call History, Reports, and Supervisor. A green banner reads "FCBS Appointment Manager".

The "Filter Criteria (Optional)" section includes:

- Interviewer: A dropdown menu with options Ana Chavez, Aurora Ramos, and Barbara Sraha.
- Appt. Status: A dropdown menu with options Scheduled, Firm Appt., Scheduled, Tentative Appt., and Not Scheduled, Broken Appt.

Below the filters are buttons for Day, Week, Month, New Appt., Reschedule, Appt. Monitor, and Not Sched. A prompt "Select A Day to View Appts" is centered.

A calendar for March 2009 is shown on the left, with the 9th of March highlighted. To the right, a table lists appointments for Monday, March 09, 2009:

Monday, March 09, 2009

9.8 Updating the Call History of a Broken FCBS Appointment

When you call to do a scheduled FCBS interview or a broken FCBS interview, the respondent may or may not be available to do the interview. If the respondent is not available to do the interview, it is considered a broken appointment. Then you will:

- Select the “Broken FCBS appointment” from the drop-down list (Exhibit 9-27)
- Then the FFMS will appear and you will log-in (Exhibit 9-28 and Exhibit 9-29)
- Once you log-in, the Dietary Call History Screen will show up (Exhibit 9-30)
- In order to update the FCBS Call History, you must select the link beside the “FCBS” (Exhibit 9-30), then you will choose the “Contact Status” and then press “Update Call Info” button (Exhibit 9-31)
- Once you exit the FFMS, the next screen will be the Status screen (Exhibit 9-32)

Exhibit 9-27. Decision Screen

Hello, Mr./Mrs JASON BAKER, my name is Janice. I'm calling for the National Health and Nutrition Examination Survey to ask some questions about food and food shopping. The interview will take about 15 minutes and you will receive a check for \$15 as a token of appreciation. Everything you say will be kept confidential. Let's begin.

9.9 Adult Requires Proxy

There are instances when an adult SP (16 years and older) requires a proxy to complete the Dietary PFU. When an adult SP cannot complete their PFU, the SP will not be asked to complete the FCBS interview. In this case you, once the decision screen appears, you select “Adult SP requires proxy” from the drop down list (Exhibit 9-33). The Status screen will show up next and to close out of the screen select the Finish button (Exhibit 9-34).

Exhibit 9-33. Decision screen

Your participation is valuable to us and we would like to ask a few more questions about food and food shopping. The interview will take about 15 minutes and you will receive an additional check for \$15 as a token of appreciation. Is now a good time? (When is the best time to reach you?)

9.10 SP Refusal

On each decision screen is a script recruiting the SP or respondent for the survey. The SP or respondent may decide not to participate. In this case you select “Refuse FCBS” from the drop-down list (Exhibit 9-35). The Status screen will show up next and to close out of the screen select the Finish button (Exhibit 9-36).

10. QUALITY CONTROL

A variety of quality control procedures will be used to assure that data are collected accurately. You (the interviewer) will complete some of these QC tasks, while Westat home staff will perform others. Key components of the QC process include:

- Observations;
- Data retrieval, and
- Review of data collected

10.1 Observations

For quality control purposes, you will be observed on a regular basis by project staff, as well as staff from NCHS and USDA. As part of the training process, in the early weeks of production, you will be monitored daily and will receive feedback to help you perfect your skills using the new application. Observations will include evaluation of the following:

- Introduction and confidentiality statement;
- Flow of the interview;
- Use of neutral probes;
- Proper use of automated system; and
- Proper use of food models

10.2 Data Retrieval

The overall quality of the data goes hand in hand with completeness; thus, data retrieval is an integral part of quality control. To complete the dietary documentation on some SPs (particularly children) you may have to retrieve data from an outside source. The procedures for conducting data retrieval are described in detail in Chapter 8. When you complete your data collection on a recall that

required data retrieval, and have recovered as much information as possible, the Dietary Recall status changes to “Complete.”

If data retrieval was unsuccessful, open the Remark box for the meal you are trying to retrieve, and enter the statement: “Data Retrieval Unsuccessful.”

10.3 Review of Data Collected

The home office staff will review your work and provide feedback if needed. In particular, they will review the information that you enter into the Other specify (OS) text box and the Remark box to determine whether you could have coded the information using an existing response item. They will also monitor the procedures you use to misreport and add foods to the Dietary Recall. The feedback that you will receive is designed to help you collect accurate data as concisely as possible.

Food Categories

APPENDIX B
FOOD CATEGORIES

Group 1 – Basic categories:

These categories collect basic details to identify the food and in some cases, additions.

BAC –bacon	JBL – jambalaya
BAK – baked beans	JDM – jerky/ dried meats
BIS – biscuit	MAC – macaroni & cheese
BMI* - breast milk	MAY – mayo/ dressings
BRB – breakfast bars	MEA – deli meats
BST – bread sticks	MIL – milk
CAK – cake	MTL – meatloaf/ balls
CAL – calzones, etc	OIX – oil
CBR – corn bread/ muffins	OLV – olives
CCH – cream cheese	PAN – pancakes
CER – ready to eat cereals	PBS – peanut butter spread
CHC – cocoa/ hot chocolate	PIC – pickles
CHE – cheese	PUD – pudding
CHI – chili	PZL – pretzels
COF – coffee	SCR – sour cream
COO – cookies	SOD – soda
COT – cottage cheese	SPS – spaghetti sauce
CRL – creole	SSH – sushi
CRW – creamers	SUG – sugars
CSS – condiments/ sauces	SWE – low cal sweeteners
DUM – dumplings	SWP – sweet potato
EGN – eggnog	SYR – syrups
ESR – egg rolls	TEA - tea
FFR – french fries	TEM – tempura
FRE – french toast	TTS – taco/tortilla shells
FST – fish sticks	WAF – waffles
GEL – gelatin	WAT – water
GNO – gnocchi	YOG – yogurt
JAM – jam	

Group 2 – Complex categories:

These categories collect detailed information about ingredients and/or preparation methods and additions.

ALC – alcohol	OTS – other salads
BBQ – barbecue/ sloppy joe	PBD – powdered beverage drinks
BLV – beef, lamb, veal	PIZ – pizza
BNR – beans & rice	POT – potatoes
BRE – bread	PSS – popsicles, etc
BUT – butter	QCH – quiche
CDY – candy	PAS – pasta. Noodles
CKC – cooked cereals	PCO – popcorn
CMD –Chinese mixed dishes	POR – pork
CPS – chips/ snacks	POU – poultry
CRA – crackers	PTP – pot pie
CST – cobbler/ strudel	RTM – ravioli, tortellini
CUR – curry	RIC – rice
DIP – dip	SCS – sweet breads. Coffee cakes
DOU – doughnut	SHP – shepherd’s pie
EGG – eggs/egg substitutes	STF – stroganoff
FIS – fish	RBB – rolls, buns, bagels
FMD –flavored milk drinks	SCP – stuffed cabbage/peppers
FRU – fruit	SGE – sausage
GRA – gravy	SOF – soufflé
HEL –hamburger helpers	STD – stuffing
JDA – juice drinks/ades	STW – stew
MSA – meat substitutes	SSS – spaghetti w/ sauce
MXD – mixed dishes	VEG – vegetables

Group 3 – Component categories:

These categories collect detailed ingredients, preparation methods and amounts of the ingredients in most cases.

BBS – Bacon, sausage sandwich	LTP – lunchables
BUR – Burger on bun	MEX – Mexican foods
DOG – hot dog	MSH – milkshakes
ESS – egg, egg salad sandwich	OSA – other sandwich (meat)
FRZ – frozen meal	PBJ – Peanut butter & jelly sandwich
GCS – grilled cheese sandwich	SHS – fish/shellfish sandwich
GRS – green salad	VSA – vegetarian sandwich
ICR – ice cream	

Group 4 – Others:

These categories do not fit elsewhere because of the way they collect additions or ingredient information.

BJU – baby food juice
DBC – dry baby cereal
FMA – formula
JBF – jarred baby cereal
SOU – Soup

Appendix D

Food Glossary

APPENDIX D
FOOD GLOSSARY

Hispanic Foods
(Mexican, Cuban, Puerto Rican, Latin, and South American)

Aceite de cartamo –safflower oil.

Acelga – Swiss chard.

Achiote – Dark red seeds from the annatto tree; used for coloring and flavor.

Achiotina – Lard and flour.

Agua de coco – Coconut water.

Agua de melon – juice made from fresh melon.

Agua de pina – juice made from fresh pineapple.

Agua de tamarindo – juice made from fresh tamarind.

Aguacate – Avocado.

Ají dulce – Sweet chili peppers.

Ají Relleno – Stuffed green peppers.

Ajiaco – A kind of stew made with Cuban root vegetables, corn, malanga, yuca, name, pork and dried beef.

Albondigas – A Cuban and Mexican dish of meatballs in tomato sauce.

Albondigon a la Mexicana – Mexican meatloaf.

Alcapurrias – Tannier (malanga, yautia) fritter stuffed with beef and ham.

Alfajores santa fecinos – Frosted caramel-filled cookies.

Almejas – Clams.

Alubias – A kind of stew; made with kidney beans cooked with different kinds of sausage, flavored with olive oil, garlic, and onions.

Amarillo – Yellow, ripe plantain.

Angulas – Salt water baby eel.

Anon – Sugar apple.

Apio Arrachaha – Root of a tropical plant with a celery-like flavor.

Arepa/Arepita - Colombian and Venezuelan cornbread bun, baked or cooked on a griddle.

Arepitas – Corn meal and cheese pancakes or fritters.

Arroz blanco – Rice cooked with lard and salt.

Arroz con gandules – Rice dish cooked with lard and pigeon peas.

Arroz con leche – Mexican rice pudding cooked with cinnamon, sugar, and milk; raisins optional.

Arroz con pollo – A casserole made with rice and chicken.

Asado antiguo a la venezolana mechado – Larded beef pot roast with capers.

Asopao – Soupy flavorful rice with slightly fried chicken or seafood, especially crabmeat.

Atole – Gruel-like beverage with cinnamon, sugar, milk and/or water; may be prepared from corn, rice, or oatmeal.

Atole de pinole – Mexican toasted ground corn, sugar, and cinnamon.

Avena – Oatmeal.

Bacalao/Bacalaito - Puerto Rican codfish fritter.

Barbacoa – Barbecued lamb.

Barbacoa estilo Mexicano – Mexican barbecued meat dish; made with beef, goat or lamb, bell peppers, garlic, chili powder, cloves, thyme, marjoram, cumin, cinnamon, pepper, bay leaves, and oregano.

Batata mameya, glaci – Glazed sweet potato.

Batida – A milkshake (or blenderized beverage) consisting of fruit, milk, and sugar.

Berberechos – Type of clam.

Berenjena – Eggplant.

Berro – Watercress.

Berza – Collard greens used as an ingredient in bean soup.

Besitos de novia – Rum and syrup soaked small cakes.

Bien me sabe – Coconut cream custard; usually served on sponge cake.

Bistec al horno – Beef steak, baked or broiled.

Bistec de palomilla – Top round sliced thin with the grain.

Bistec de palomilla empanizado – Top-round steak, sliced thin with the grain, breaded in eggs and cracker meal, and fried.

Bistec de rinonada – Rib eye steak.

Bistec en cazuela – Steak cooked in wine sauce.

Bizcocho al revés – Upside-down cake.

Bizcocho de guineo – Banana cake.

Bizcocho de nevera – Icebox cake.

Biznaga – Candied cactus; used as an ingredient in desserts or eaten as a candy (acitrón).

Boliche/Bolicho mechado – Eye round stuffed with ham or sausage (chorizo).

Bolillo - Mexican bobbin-shaped yeast-bread roll.

Bolis – Frozen flavored ice – similar to Flavor-Ice.

Boniatillo – Dessert made from white sweet potato.

Boniato – White sweet potato.

Bonito – Fish, used as tuna fish.

Brazo gitano – Jelly roll. Cuban is baked with corned beef filling.

Buñuelo – Round pastry deep-fried and sprinkled with sugar.

Burrito - A flour tortilla folded and rolled to completely enclose a savory filling including shredded or chopped meat, refried beans, grated cheese, etc.

Cabro en fricase – Goat, fricasse.

Cajeta – A caramel-like sweet, traditionally made with a portion of goat's milk and sugar.

Calabacitas a la Mexicana – Mexican summer squash dish made with zucchini, lean pork, potatoes, corn, onions, garlic, bell pepper, salt, and pepper.

Calabaza – Pumpkin or Puerto Rican variety of squash.

Calamares – Squid.

Caldo de arroz con pollo – Mexican chicken rice soup made with cooked chicken, rice, tomatoes, onions, seasonings, diced carrots, and celery.

Caldo de frijoles – Mexican bean soup made with dried pinto or black beans; seasoned with ham shank or fried bacon.

Caldo de pollo – Chicken soup made with vegetables (potatoes and carrots).

Caldo de res – Beef soup made with vegetables.

Caldo gallego – Spanish broth made with white beans, turnips, collard greens, potatoes and ham bone.

Camarones con huevo – Mexican shrimp with egg or “torta de camorones.”

Camote – Sweet potato.

Campechana – Oval-shaped puff of pastry with shiny, caramelized top.

Caña – Sugar cane.

Capirotada I – Bread pudding using bolillos (small yeast rolls); the bread is fried and contains piloncillo (unrefined dark brown sugar). See below.

Capirotada II – Bread pudding made with repeated layers of bread and seedless raisins, peanuts, Monterey Jack cheese, brown sugar and butter.

Carambola – Star fruit; when opened gives the appearance of a “star.”

Carey guisado – Turtle meat stew.

Carne adobada – Mexican marinated and dried meat.

Carne asada – Mexican beef cooked over a charcoal fire.

Carne con chile colorado – Mexican beef in red chili sauce.

Carne con papas – Meat and potato stew.

Carne de puerco con chile verde – Pork with green chili sauce.

Carne empanizada – Meat, breaded and fried.

Carne guisada - Mexican beef stew with or without potatoes, made with gravy or tomato sauce.

Carne mechada – Meat, stuffed and stewed.

Carne molida – Hamburger.

Carnero – Lamb.

Carnitas – Fried pork or beef usually made with fried pork scraps which are pre-fried; served with tortillas, chili sauce, and guacamole. May also refer to a dish of little pieces of browned pork.

Casabe – Bread made from yuca meal.

Cazon – Sharks' fin.

Cazuela – Pudding made with pumpkin.

Cecina – Name given to thin strips of dried meat or jerky; may also translate as corned beef.

Chalupa – Tortilla formed in shape of a little boat and filled with various ingredients such as shredded pork, beef, poultry, tomatoes, onion, or cheese.

Champurrado – Gruel-like beverage (usually cornmeal) with cinnamon, sugar, milk, and flavored with chocolate; type of atole.

Charales – Tiny river or lake fish.

Chayote – Squash-like fruit, pale green in color and shaped like a pear; also known as “vegetable pear,” mirliton,” and “christophine.”

Chicharron – Crisp, fried pork skin.

Chicos – Sweet corn dried on the cob.

Chilaquiles – A casserole made of cut up tortillas and red or green chile sauce; also may contain cheese, meat, or chicken.

Chiles rellenos - Green chile peppers stuffed with Monterey Jack cheese, hard boiled eggs or meat, dipped in flour and egg batter, fried until golden brown on both sides; often served with tomato sauce.

Chili con carne - Dish of diced or ground meat seasoned with chilies, originated in Texas.

Chili con queso – Chile with cheese; prepared with green chile peppers, Monterey Jack cheese, tomatoes, onions, and butter.

Chimichanga – Deep fried flour tortilla stuffed with minced beef or chicken, potatoes, and seasonings.

Chocolate con leche – Chocolate, sugar, cinnamon and spices in milk.

Chongos – A dessert made from cooked sweetened milk curds.

Chorizo – A Spanish sausage with many variations but always including pork and pimiento.

Churros – Twisted doughnuts; made with flour, water, sugar, eggs, butter, and salt; fried in deep fat.

Cocido – Beef stew made with soup bones, bone marrow or beef ribs, and fresh vegetables in season, such as potatoes, celery, carrots, cabbage, spinach leaves, corn on the cob, green beans, stewed or fresh tomatoes, zucchini, onions, and garlic.

Codfish fritter, Puerto Rican style - Fritter made with cod, flour, seasonings and deep fried.

Enchilada - Mexican corn pancake stuffed with chili pepper, ground meat, or cheese and tomato salad.

Escabeche – Prepared in a light pickling solution.

Fajitas - Mexican dish of strips of meat and/or vegetables marinated in lime juice, oil, and chili peppers, stir-fried and served as a filling for soft tacos.

Falda – Skirt or flank steak.

Fideo – Vermicelli.

Flan – Custard with caramel sauce.

Flautas – Tightly rolled (usually corn) tortillas; filled with chicken or beef, then fried.

Gandinga – Stew made of organs, especially pork liver and heart, and vegetables.

Garnachas – Small fried tortillas; covered with ground beans, chili sauce, bits of chicken, meat or crumbled sausage, and lettuce.

Genip – Tropical American fruit, also known as a “Spanish lime”; yellow, sweet, edible fruit.

Gorda/Gordita – A small fried and garnished tortilla; may be topped with refried beans, shredded chicken, lettuce, and onion. May also be referred to as “sops”.

Guacamole – Mashed avocado mixed with finely chopped chile pepper, tomato, and onion.

Guarapo – Sugar cane beverage.

Hallaca - Venezuelan corn meal dish similar to a tamale with meat filling with raisins, olives, tomatoes, green peppers, and chopped onions.

Horchata – A refreshing, milky-looking drink, traditionally made from ground rice, ground dried melon seeds or almonds.

Huachinango – Red snapper.

Huevos rancheros – Mexican dish of fried eggs set on tortillas and covered with a tomato-and-chile pepper sauce.

Jicama – A white, sweetish, juicy bulb; it is sliced and eaten in salads or with lemon or chile. Similar in texture to a water chestnut.

Licuado – A beverage made with fruit, milk, and sugar. There are two types:

Licuado with egg or Quik; fruit milk and sugar with egg or Quik added.

Limonada – Juice made with Mexican limes.

Majarete/manjar blanco – Rice flour and cream pudding; most often called blancmange.

Maizena – cornstarch cooked with milk.

Masa – The dough made of dried corn kernels boiled with unslaked lime; used for making tortillas.

Maté – Sweetened beverage made with dried green leaves.

Mazapan – Marzipan – a type of candy that crumbles when handled; ingred: wheat flour, peanuts, sugar, corn syrup, cocoa butter, cocoa, goat's milk, milk, soybean oil, sunflower oil

Menudo soup - A hot, spicy Mexican soup made with tripe, calves feet, chiles, hominy and seasoning, served with hot tortillas.

Milanesa – Chicken fried steak or chicken fried chicken.

Mixiotes – Parchment-like skin stripped from the outside of the maguey leaf; also name given to packages of seasoned meat cooked in the maguey “parchment.”

Mole Poblano – Highly flavored sauce made from a paste of chiles, nuts, chocolate, and other ingredients; prepared both homemade and commercially.

Mole rojo – Cooked sauce usually prepared with red tomatoes, red chiles, herbs, and spices.

Mole verde – Cooked sauce usually prepared with green tomatoes, sprigs of fresh coriander, green chiles, pumpkin seeds, or nuts; may contain other ingredients.

Mondongo soup - Spicy hot soup made with tripe, plantains, and chili peppers, popular in Honduras, Costa Rica, and the Dominican Republic.

Morongá/Morcilla – Blood sausage.

Nachos bean - A crisp tortilla chip topped with refried beans, melted cheese and chopped chiles.

Nopales – The tender paddle-shaped leaves of the nopal cactus, eaten as a cooked vegetable; may be purchased or canned.

Ojo – Mexican pastry with circular shape; flaky pastry around the outside and sponge cake in the middle.

Paella – Yellow rice mixed dish which may be made with fish, shellfish, chicken, pork, chorizo, peas, and/or pimientos.

Pan Dulce - Mexican sweet, flat, yeast-risen buns with cinnamon topping.

Pastel de tres leche – Cake made with regular milk, evaporated milk, and condensed milk.

Pastelillo de carne - Mexican meat-filled pastry.

Pastelillo de queso - Mexican cheese-filled pastry.

Pastelon de carne - Sweet plantain baked with meat, popular in the Dominican Republic.

Pepitas – Hulled unsalted pumpkin seeds or squash seeds.

Picadillo – Minced meat stew of the Southwest whose name is taken from the Spanish word for hash; mix of ground or shredded meat and other ingredients, used as a stuffing also.

Pico de gallo – A fresh vegetable salsa prepared with tomatoes, onions, cilantro, serrano chiles, and lime juice.

Piloncillo – A cone of dark brown unrefined sugar with a strong molasses flavor, also called “panache.”

Pim – Round cake of tortilla dough and lard baked on a griddle.

Pinacbet – A mixed dish that includes eggplant, tomatoes, green pepper, and bitter melon.

Pinole – A sweetened and toasted corn flour sometimes eaten dry as dessert.

Pipián – A sauce made of ground pumpkin seeds, nuts, spices, and chiles.

Plantaina – A type of banana, green or ripe which needs cooking to be edible.

Plátano – May either translate as banana or plantain; to differentiate, probe “para cocinar o no?” or “platáno macho o no?”

Polvorones – Shortbread cookie.

Pozole - A thick, hearty Mexican soup with pork (or chicken), hominy, onions and dry chiles and fresh vegetables added at the table, traditionally served at Christmas.

Pre-preparado – Spanish translation of self-basting.

Pulque – A milky white fermented drink made from aguamiel, the liquid from the maguey cactus.

Quanimes – Boiled cornmeal sticks.

Quesadilla - A flour tortilla filled with a savor mixture, which can include cheese, cooked meat, refried beans, then folded in half and toasted under a broiler or fried.

Queso Añejo – This “aged” cheese is white and crumbly, often very dry and salty, rather resembling a dry feta. The color ranges from creamy to pale-yellow with an orange outer coating of paprika.

Queso Asadero – A cheese similar to mozzarella.

Queso Chihuahua – A milk, spongy, semi-soft, pale-yellow cheese.

Queso Cotija – An aged cheese similar to queso añejo.

Queso de Oaxaca – A light stringy cheese often served as an appetizer. Also called “quesillo.”

Queso flameado – Mexican version of Swiss cheese fondue; also known as “queso fundido” or “queso asado.”

Queso fresco – A soft, moist, white crumbly cheese made from cow’s milk with a mild, slightly sour flavor.

Queso manchego – A popular Spanish cheese made from cow’s milk.

Queso panela – Mexican native ranch-style cheese, which resembles cottage cheese.

Rajas de chiles – Strips of peeled roasted green chiles; used in cooking.

Recado coloardo – A paste of achiote and seasonings, such as pepper, cloves, cumin, garlic, oregano, salt, and vinegar. Also known as “adobo de achiote” or “recado rojo.”

Red Mexican beans cooked - Mexican dish of beans cooked with lard, onions, and seasoning.

Refried beans (frijoles refritos) - A Mexican dish of cooked red beans or pinto beans, mashed and fried in lard.

Rompopo – A Mexican eggnog, made of eggs, milk, cinnamon, and sugar, and spiked with rum.

Ropa vieja – Shredded flank steak, seasoned with onions, green pepper, wine, garlic, and other seasonings.

Rosca de los reyes – A ring-shaped sweet bread with a tiny favor baked inside; traditionally served on January 6.

Saladito – A dried plum covered with salt.

Salpicón – Cold shredded meat salad; prepared with flank steak, potatoes, olive oil, onion, and seasoning, garnished with avocado, lettuce leaves, tomato, and onion.

Salsa - Mexican word for “sauce,” may be cooked or raw, mild to extremely hot.

Salsa de chile rojo – Red chile sauce; cooked sauce usually consisting of tomatoes, chile ancho, onions, oil, and seasonings.

Salsa verde – The primary ingredients are green tomatoes, onions, and serrano chile; may be blenderized or mashed by hand. There are many varieties of green chile sauce, cooked or raw, and with or without the onions and tomatoes.

Sangría – A refreshing drink, consisting of mixed citrus juices, to which red wine and chopped fruit have been added.

Sofrito – Basic sauce of tomato, onion, green pepper, vinegar, garlic, oil, salt, and pepper.

Sopa - Spanish word for “soup.”

Sopa de Albondigas - Beef broth soup with meatballs and chopped vegetables

Sopa de arroz – Mexican rice.

Sopa de carne y fideos - Same as sopa seca de fideo but also includes meat.

Sopa seca de arroz (dry rice soup) - Mexican dish based on rice combined with tomatoes, onions and garlic, cooked in broth until all liquid is absorbed, thus ‘dry soup’.

Sopa Seca de Fideo (dry noodle soup) - Same as above, but made with vermicelli.

Sopaipilla – Deep-fried fritter usually served with honey; resembles a pillow.

Sope – A small fried and garnished tortilla.

Surullos/Surullitos – Cornmeal sticks.

Taco - A crisp, fried folded Mexican tortilla that can be filled with various mixtures of meat, vegetables, and cheese.

Taco sauce - A fresh or cooked tomato-based sauce served on tacos, may be mild to very hot.

Tamal in a leaf - A small Mexican dish of cornmeal dough and filling wrapped in a banana leaf.

Tamale - A small Mexican package of cornmeal dough and filling wrapped in a corn husk and steamed. The sweet version contains dried fruit and nuts and sometimes cream cheese and egg.

Tamarindo – Generic candy that can be hard, soft, chewy, with sugar, sour, or liquid.

Templeque - Puerto Rican desert made with coconut milk, cornstarch, sugar, and vanilla.

Tomatillos – Small green tomatoes commonly used for sauces; covered with a paper-like husk which is removed before cooking.

Tortilla - A Mexican flat pancake made from corn or wheat flour, used as a wrapper for a variety of fillings. Other Hispanics may use “tortilla” to mean “omelet.”

Tostadas – Toasted tortillas; fried until golden brown and topped with refried beans, meat, lettuce, tomatoes, and cheese.

Tostones – Green plantain fried and flattened with added fat.

Totopos – Small, triangular pieces of crisp-fried tortilla; frequently used to adorn frijoles and to scoop up guacamole or other food.

Traditional liquado: A blend of fruit, milk, and sugar.

Verdolagas – Purslane; a ground creeper, with small oval, fleshy leaves that are mid-green in color and fleshy.

Other Ethnic Foods

Babka – A light sweet yeast cake/bread containing raisins; often glazed and flavored with rum; often an Easter treat made in a fluted tube pan.

Bialy – Jewish-American style baked roll sprinkled with onion flakes.

Bean Cake - Chinese red bean paste in dough wrapper, fried in oil.

Beef ka pow - Thai stir-fried diced beef with vegetables and peanuts.

Bierock - German baked bun of yeast flour dough made with lard, stuffed with cabbage, onion, and meat.

Black Bean Sauce - A Chinese sauce made from black beans, soy sauce, and seasonings.

Burdock – Wild thistle-like plant; young leaf stems used in salads; in Japan called “gobo.”

Calzone - A Neapolitan yeast turnover filled with meat, mozzarella cheese, spinach, and garlic, fried or baked.

Canoli – Italian type pastry; fried shell stuffed with sweetened ricotta cheese.

Cappuccino – Traditional beverage of Italy consisting of dark coffee served with a foamy head of milk or cream.

Chicken ka pow - Thai stir-fried diced chicken with vegetables and peanuts.

Chicken Somlaw soup

Chinese roll - Roll filled with bean paste, pork, or other filling, baked or steamed.

Chop suey - Stir-fried dish with vegetables, flavored with soy sauce and garlic, served over rice.

Chow mein - Stir-fried dish with vegetables, flavored with soy sauce and garlic, served over crispy noodles.

Chow sum shin - Chinese sliced beef, chicken and shrimp with broccoli, straw mushrooms, and bamboo shoots.

Cioppino – Seafood-type stew; may contain a variety of fish/shellfish and vegetables, such as tomatoes, onions, carrots, and celery.

Crab Rangoon - Chinese appetizer of crab meat (may also contain cream cheese) wrapped in a wonton skin and deep fried.

Dim Sum - A variety of small dishes such as steamed or fried dumplings served from carts in Chinese restaurants or tea houses.

Duck Soup - Chinese soup made by simmering the bones of a cooked duck with tofu or transparent noodles.

Egg roll - A mixture of vegetables (and meat or shrimp) wrapped in a thin noodle-like wrapper that is deep fried.

Egg foo young - Chinese dish made with beaten egg, bean sprouts, and chopped onion, served with a brown sauce.

Falafel - Middle Eastern specialty of small, deep-fried balls of highly spiced ground chickpeas, usually served in a pita or as an appetizer with a tahini-based sauce.

Fettuccine - Italian pasta cut in 1/4" wide strips.

Fried Rice - A Chinese dish made by stir-frying cooked rice with a small amounts of vegetables (and meat) and seasonings. The following types of fried rice are included:

Funnel cake – Pennsylvania Dutch deep-fried pastry made from batter dripped through a funnel, then served with sugar or maple syrup.

Gai yad sai - Thai dish of breast of chicken stuffed with crabmeat, fried with vegetables and spicy wine sauce.

Gai yang - Thai dish of marinated, grilled chicken breast served with spicy tamarind sauce.

Gang gai - Thai curried chicken with bamboo shoots and basil leaves.

General Tsaos chicken - Chunks of battered and deep fried chicken with a thickened sauce, seasoned with dried hot chilies.

Gnocchi - Small Italian dumplings made from semolina flour (or mashed potatoes and regular flour), eggs and Parmesan cheese.

Goong sapparos - Thai dish of shrimp, cashews, pineapple, scallions, and asparagus with brown sauce.

Halva - Middle Eastern candy made with sesame seeds, also may be flavored with chocolate.

Hoi jow - Thai appetizer of crabmeat and chicken wrapped with bean curd skin, deep-fried and served with a sweet sauce.

Hot and Sour Soup - A thick Chinese soup made with strips of pork and a variety of vegetables, seasoned with white pepper and vinegar.

Hummus - A Middle Eastern dip made from pureed garbanzo beans, olive oil, garlic, and tahini.

Jai Monk's food – Lotus, ginger root, tofu, water chestnuts, and oriental mushrooms.

Kadayif – Similar in ingredients to baklava.

Kai bi - Thai sweet and sour beef.

Kao pad - Thai fried rice with beef, chicken, pork, shrimp, or crabmeat.

Kao pad pak - Thai dish of vegetables stir-fried with fried rice.

Kasha - A Russian or Polish dish made from boiled cereal, often buckwheat or barley.

Kielbasa – A Polish pork sausage (sometimes containing beef or veal) seasoned with garlic, smoked and pre-cooked, and sold in long links.

Kee mao - Thai fried shrimp and/or squid in hot spicy curry sauce.

Kimchi - Korean pickled cabbage or other vegetables, with red chilies.

Kishke - A Jewish-American sausage made with ground meat and Matzo meal.

Knish - A pastry of Jewish origin consisting of a piece of dough encasing a filling of either mashed potatoes, cheese, ground meat or buckwheat groats.

Kreplach - Jewish small noodle dumplings filled with chopped meat or cheese and simmered in a broth or as part of a soup.

Kung pao chicken - Szechwan dish of chunks of chicken and peanuts seasoned with garlic and hot a chili peppers.

Kung pao shrimp - Szechwan dish of chunks of shrimp and peanuts seasoned with garlic and hot a chili peppers.

Latke – Jewish style potato pancake.

Lebkuchen – Cookie made with eggs, sugar, flour, cinnamon, nuts, and citron; frosted with confectioners sugar.

Lemon grass soup - Thai soup made with coconut milk flavored with lemon grass.

Lo mein - A Chinese dish of boiled noodles combined with stir-fried vegetables (and meat) coated with stir-fry sauce.

Lumpia - A mixture of meats and vegetables wrapped in a spring roll or egg roll wrapper. May be raw (and wrapped in a lettuce leaf) or deep-fried.

Manapua - Chinese raised buns made of yeast dough stuffed with spiced roast pork.

Matzo ball (knaidel) – Jewish style small round dumplings made with matzo meal, egg, chicken fat or oil, and usually cooked and served in chicken soup.

Miso soup - Japanese soup made with miso, a fermented soybean paste.

Mortadella – Sausage that usually consists of pork, garlic, and seasonings.

Mo Yang - Thai dish of marinated grilled pork served with spicy tamarind sauce.

Moo goo gai pan - Chinese dish of chicken, mushrooms, snow peas (and other vegetables) in a light colored sauce flavored with garlic and sherry

Moo shi - A stir-fried Chinese dish containing shredded vegetables (and meat), tiger lily buds, wood ears, egg and seasonings, served with thin pancake wrappers.

Nok tod - Thai marinated quail, roasted and served with cashews, asparagus and oyster sauce

Nua sub - Thai rice noodles topped with minced beef, onions, tomatoes, and mushrooms with curry sauce.

Nua Yang - Thai dish of marinated, grilled steak served with spicy tamarind sauce.

Pad Thai - Thai stir-fried rice noodles with shrimp, bean sprouts, tofu, fish sauce, and peanuts.

Pad Thai pak - Thai noodles stir-fried with assorted vegetables, bean curd and crushed peanuts, egg optional.

Pan woon sen - Thai national noodles stir-fried with shrimp, pork, mushrooms and vegetables, served with rice.

Panang gai - Thai dish of sliced chicken, curried peanut sauce, basil, and lime leaves

Panang tofu - Thai dish of fried tofu simmered with curried peanut sauce, basil, and lime leaves.

Panzerotti - Italian dish of vegetables, several cheeses, and sauce (pepperoni optional), wrapped in yeast dough and fried or baked.

Pattaya seafood - Thai dish of shrimp, squid, scallions, and clams in chili sauce with scallions, mushrooms and basil leaves

Pho Bo - Vietnamese beef soup with noodles.

Pierogi - A Polish half-moon shaped noodle dumpling filled with pork, potatoes, cheese, mushrooms, or cabbage. After being cooked in boiling water, they may be sautéed in butter.

Piroshki - A small Russian turnover consisting of a pastry wrapping which is filled with meat, seafood, cheese, or mushrooms then baked or fried and served as hors d'oeuvres.

Plato Arabe (Kibby) - A Middle Eastern dish combining ground meat and seasonings, which may be served raw or cooked.

Poi – Staple of the Hawaiian diet consisting of a pastry preparation of taro, breadfruit, sweet potato, or banana.

Pork ka pow - Thai stir-fried diced pork with vegetables and peanuts.

Pot Sticker - A wonton skin, stuffed with meat and pan-fried until crispy.

Pu num - Thai fried soft shell crabs with one of several sauces.

Quiche Lorraine - A savory tart with a custard (egg-based) filling. May also contain fish, meat, poultry, and/or vegetable.

Red beans and rice - A spicy Louisiana dish of kidney beans, ham, onions, and seasoning served over rice.

Risotto - An Italian rice dish made with Arborio rice, may be flavored with cheese, mushrooms and/or fish.

Samosa - A fried Indian pastry filled with potatoes and vegetables, served as an appetizer.

San shein soup - Shrimp, chicken, mushrooms, and snow peas in a clear broth with sizzling rice.

Sashimi - A Japanese hors d'oeuvre of raw fish served with a dipping sauce and wasabi (horseradish paste).

Satay - Thai appetizer of skewered chicken or pork, marinated and grilled on a skewer, served with peanut sauce and cucumber relish.

Satsuma – A fruit similar to the tangerine in taste and appearance, with loose, smooth skin and pale orange flesh.

Scrapple – Pork-containing recipe similar to goetta except with cornmeal instead of oats.

Seafood Ka Pow - - Thai stir-fried seafood with vegetables and peanuts.

Shui-mai - A small stuffed steamed Chinese dumpling containing pork and shrimp.

Soka lamb curry - Thai dish of slices of lamb cooked in hot curry sauce with potatoes, peas, and cherry tomatoes.

Souse – Pieces of pork meat in vinegar-spiked gelatin base to which dill pickles, sweet red peppers, and bay leaves are sometimes added.

Spanakopitta - A layered Greek dish made of feta cheese, spinach and filo pastry.

Spring roll, Chinese - A mixture of vegetables (and meat or shrimp) wrapped in a thin noodle-like wrapper that is deep fried.

Spring roll, Thai - A mixture of vegetables, cellophane noodles and shrimp wrapped in rice paper and served uncooked with a dipping sauce

Steamed bun - A Chinese flour dough wrapped around any of a variety of fillings including barbecued pork or sweet bean paste.

Steamed dumplings - Chinese dumplings made with wonton skin or other dough, filled with meat, vegetables, and/or seafood.

Stromboli - A Philadelphia specialty, a sandwich of cheese and pepperoni wrapped in pizza dough.

Sushi - A Japanese specialty of circles or rectangles of boiled rice flavored with sweet vinegar and wrapped with a wide range of ingredients such as seaweed, sliced vegetables and cooked egg.

Sweet and sour chicken - Chinese dish of battered, deep fried chunks of chicken, pineapple, green peppers, tomatoes (other vegetables optional) in a thickened sauce.

Sweet and sour pork - Chinese dish of battered, deep fried chunks of pork, pineapple, green peppers, tomatoes (other vegetables optional) in a thickened sauce.

Szechuan beef - Pieces of beef in a thickened sauce flavored with Szechuan peppercorns.

Szechuan chicken- Pieces of chicken in a thickened sauce flavored with Szechuan peppercorns.

Talay pow - Thai dish of assorted seafood grilled and served with chili-fish sauce.

Teriyaki sauce - Japanese sweetened soy sauce.

Tiramisu - An Italian dessert made with ladyfingers, Mascarpone cheese, sugar, and chocolate.

Tod mun koong - Thai minced shrimp deep-fried with light bread crumbs, served with sweet sauce.

Tofu - Ground soybeans, boiled in water, strained and coagulated with salt or acid.

Tom ka gai - Thai chicken and coconut milk soup.

Tom yum goong - Thai hot and sour soup made with lemon grass, straw mushroom, and shrimp.

Tonkatsu - Japanese dish of port cutlet or chicken served on rice.

Transparent noodles - Oriental noodles made from rice, bean, or other starch.

Wonton - A Chinese noodle with a meat or vegetable filling which can be fried or poached in a clear soup.

Yaki Soba - Japanese stir-fried wheat noodles with onion, cabbage, bean sprouts and choice of meat (chicken, beef, pork, or shrimp) with plum sauce.

Flexible Consumer Behavior Survey (FCBS) Module

Phone Follow-up Questionnaire

Flexible Consumer Behavior Survey (FCBS) Module

Phone Follow Up Questionnaire

October 21, 2009

NHANES 2009-2010 FCBS PHONE FOLLOW UP QUESTIONNAIRE

CBQ.502 Do you have the green hand card booklet? [It is in the same bag as the food measuring guides {you used for your/we used for SP's} dietary phone interview. I'll wait while you locate it.

Do you have it?]

Yes..... 1 (CBQ.505)
No, 2
REFUSED..... 7
DON'T KNOW 9

CBQ.503 Let's go ahead with the interview anyway. Do you have a cereal box, can or package of food with a food label on the back or the side that you can use for this interview? I'll wait while you locate it.

Yes.....1
No2
REFUSED.....7
DON'T KNOW9

CBQ.505 {I'll tell you when you will need it.} For the first few questions, please answer yes or no.

In the past 12 months, did you buy food from fast food or pizza places?

CAPI INSTRUCTION:

If CBQ.503="2", "7", OR "9", REPLACE TEXT IN THE BRACES WITH THE FOLLOWING:

"Ok, let's go ahead with the interview."

Yes..... 1
No 2 [CBQ.550]
REFUSED..... 7
DON'T KNOW 9

CBQ.510 I'm going to read several reasons why you might buy food from fast food or pizza places instead of cooking at home.

First, do you buy food from fast food or pizza places because it is **cheaper** than cooking at home?

Yes..... 1
No 2
REFUSED..... 7
DON'T KNOW 9

CBQ.515 Do you buy food from fast food or pizza places because the foods there are more **nutritious** than foods cooked at home?

Yes..... 1
No 2
REFUSED..... 7
DON'T KNOW 9

CBQ.520 Do you buy food from fast food or pizza places because the foods there **taste better** than foods cooked at home?

Yes..... 1
No 2
REFUSED..... 7
DON'T KNOW 9

CBQ.525 Do you buy food from fast food or pizza places because it is more **convenient** than cooking at home?

Yes..... 1
No 2
REFUSED..... 7
DON'T KNOW 9

CBQ.530 Do you eat at fast food or pizza places instead of cooking at home to **socialize** with family and friends?

Yes..... 1
No 2
REFUSED..... 7
DON'T KNOW 9

CBQ.535 The **last** time when you ate out or bought food at a **fast-food or pizza place**, did you see **nutrition or health information** about any foods on the menu?

YES..... 1
NO 2 (CBQ.545)
REFUSED..... 7 (CBQ.545)
DON'T KNOW 9 (CBQ.545)

CBQ.540 Did you use the information in deciding which foods to buy?

YES..... 1
NO 2
REFUSED..... 7
DON'T KNOW 9

CBQ.545 {Please open your hand card booklet and turn to hand card 1 to answer the next question.}

If nutrition or health information were readily available in fast food or pizza places, would you use it often, sometimes, rarely, or never, in deciding what to order?

[HAND CARD #1]

CAPI INSTRUCTION: Do NOT display the text in braces if CBQ.502="2".

REFUSED77
DON'T KNOW99

CBQ.637 How many **ounces** of **grains** would you say a {man/woman} of your age and physical activity should eat each day for good health?

HELP SCREEN:

Any food made from wheat, rice, oats, cornmeal, barley or another cereal grain is a grain product. Bread, pasta, oatmeal, breakfast cereals, tortillas, and grits are examples of grain products.

|_|_|_|_|_|

ENTER NUMBER OF OUNCES

REFUSED77

DON'T KNOW99

CBQ.640 How many **ounces** of **"whole grains"** would you say a {man/woman} of your age and physical activity should eat each day for good health?

INTERVIEWER INSTRUCTION:

If the respondent does not know what "whole grains" means, code "66".

Use help screen to provide answers to the respondent if he/she wants to know what "whole grains" means. However, do **NOT** change the original "66" code even if the respondent gives an answer after you had explained "whole grains".

HELP SCREEN:

Whole grains contain the entire grain kernel -- the bran, germ, and endosperm. Examples include: whole-wheat flour, whole-wheat bread, whole-wheat cereal flakes, bulgur (cracked wheat), oatmeal, whole cornmeal, and brown rice.

|_|_|_|_|_|
