Introduction to the Occupational Injury and Illness Classification Manual

1 Introduction to the Occupational Injury and Illness Classification Manual

The Occupational Injury and Illness Classification Manual provides a classification system for use in coding the case characteristics of injuries, illnesses, and fatalities in the Survey of Occupational Injuries and Illnesses (SOII) and the Census of Fatal Occupational Injuries (CFOI) programs. This manual contains the rules of selection, code descriptions, code titles, and indices for the following code structures:

- Nature of Injury or Illness
- Part of Body Affected
- Source of Injury or Illness/Secondary Source of Injury or Illness
- Event or Exposure

This is the third version of the Occupational Injury and Illness Classification System (OIICS). The Bureau of Labor Statistics' Classification Structure Team developed the original OIICS with input from data users and States participating in the BLS Occupational Safety and Health Statistics (OSHS) Federal/State cooperative programs. The original system was released in December 1992. It was approved for use as the American National Standard for Information Management for Occupational Safety and Health in 1995 (ANSI Z16.2—1995).

In September 2007, OSHS staff updated the 1992 manual to incorporate various interpretations and corrections. Version 2.0, dated September 2010, is the first major revision since the 1992 manual. The BLS OIICS Revision Team developed the new manual.

In developing this manual, BLS sought input from many interested parties. In February 2008, a Federal Register Notice on the proposed change to the manual was issued. In addition, the OIICS Revision Team sent out numerous letters and e-mails to users. Based on the initial comments received and other information, the team developed a draft 2010 manual that was disseminated to interested parties in April 2010. The team considered comments received, made revisions, and completed the final manual in September 2010.

Here are some highlights of the differences between this version of the manual and the previous ones.

- Numerous categories have been added, deleted, or modified.
- All codes begin with 1 through 9, i.e. no codes begin with 0. This change was undertaken to facilitate the use of OIICS codes in computer systems, and resulted in very few categories having the same code as in the previous manual.
- In the Event category, codes are arranged in order of precedence. This facilitates coding when more than one Event category applies.

*-Asterisks denote a summary level code not assigned to individual cases.

- The rules of selection for Source and Secondary Source are now specific to the Event.

This manual consists of four sections. Section 1 is the table of contents and this introduction. Section 2 contains the definitions, rules of selection, and descriptions for Nature, Part, Source, and Event. Section 3 contains title lists for each of the four OIICS components. Section 4 contains indices for each component.

The OIICS Revision Team developed this manual. The members of the team include the following employees of BLS:

Gail E. Barnett
Carl B. Barsky
Brad Farrell
Linda Garris
Andrew D. Marsh

Joyce M. Northwood
Tiffany M. Pinkney
Eric F. Sygnatur
Katherine Taylor-Shirley

2.1.1 Nature of Injury or Illness—Definition, Rules of Selection

1.0 DEFINITION

The nature of injury or illness identifies the principal physical characteristic(s) of the work related injury or illness.

RULES OF SELECTION:

- 1.1 Name the injury or illness indicated on the source document. *Example: For strained back, choose **Strains**.*
- 1.2 When two or more injuries or illnesses are indicated, and one is a sequela, aftereffect, complication due to medical treatment, or re-injury, choose the initial injury or illness. *Example: If a laceration became infected developing into septicemia, choose **Cuts, lacerations**.*
- 1.3 When two or more injuries or illnesses are indicated and one is more severe than the other(s) and is not a sequela or complication of the other injury or illness, select the more severe injury or illness. *Example: For sprained finger and fractured wrist, choose **Fractures**.*
 - 1.3.1 When a single event or exposure produces an injury and transmits a disease simultaneously, and one is more severe than the other(s), select the more severe injury or disease. *Example: If a needlestick produces a puncture wound and transmits serum hepatitis, choose **Type B viral hepatitis (serum hepatitis)**.*
- 1.4 When two or more injuries or illnesses are indicated but neither of which can be determined as being more severe than the others, select the appropriate multiple injuries or illnesses classification code. *Example: For fractured and severely burned left leg, choose **Fractures and burns**.*

*-Asterisks denote a summary level code not assigned to individual cases.

2.1.2 Nature of Injury or Illness—Titles and Descriptions

The Nature of Injury or Illness code structure is arranged so that traumatic injuries and disorders are listed first (in Division 1) while diseases are listed in Divisions 2 through 9. Division 8 classifies multiple physical characteristics whose individual codes are found in Divisions 1 through 6.

The Nature of Injury or Illness divisions are arranged as follows:

<u>DIVISION</u>	<u>TITLE</u>
1	Traumatic Injuries and Disorders
2	Systemic Diseases and Disorders
3	Infectious and Parasitic Diseases
4	Neoplasms, Tumors, and Cancers
5	Symptoms, Signs, and Ill-defined Conditions
6	Other Diseases, Conditions, and Disorders
7	Exposures to Disease—No Illness Incurred
8	Multiple Diseases, Conditions, and Disorders
9999	Nonclassifiable

*-Asterisks denote a summary level code not assigned to individual cases.

NATURE

1* TRAUMATIC INJURIES AND DISORDERS

This division classifies traumatic injuries and disorders, acute effects of external agents, and acute poisoning and toxic effects. Generally, a traumatic injury or disorder is the result of a single incident, event, or exposure over the course of a single shift. Cases coded to this division need not be consistent with the Occupational Safety and Health Administration (OSHA) recordkeeping definition of an injury or whether the employer reported the case as an injury or illness on the OSHA log.

10 Traumatic injuries and disorders, unspecified

This code classifies traumatic injuries and disorders when the only information available describes the incident as traumatic. For example, nature would be coded as 10 if all that is known about the injury is that the employee was hurt in car accident. This code is also used for hip and joint replacements or other medical procedures when the initial injury is not specified. It includes nonfatal blunt force trauma and fatal blunt force trauma when the part of body is unknown.

Damage to existing prosthetic or orthopedic devices (artificial limbs and eyes, hearing aids, pins, rods, medical implants) without accompanying injury to the worker's body are coded in 61.

11* Traumatic injuries to bones, nerves, spinal cord

This major group classifies traumatic injuries to the bones, nerves, or spinal cord and includes bone fractures, paralysis resulting from a traumatic spinal cord injury, and pinched nerves resulting from a traumatic injury. Herniated discs and other dislocations are excluded from this category and coded in 121.

110 Traumatic injuries to bones, nerves, spinal cord, unspecified

111 Fractures

This nature group classifies traumatic injuries that result in fractures of bones or teeth. Nose and rib fractures are assumed to be bone fractures unless otherwise specified.

Includes: closed fractures (fractures for which no open wound exists); open fractures (fractures for which there is an accompanying open wound); comminuted, compound, depressed, elevated, fissured, greenstick, impacted, linear, march, simple, and spiral fractures; slipped epiphysis; stress fractures; broken bones; cracked bones; broken or chipped tooth; fractures resulting from nonvenomous

Diseases or disorders of the nervous system that occur over time as a result of repetitive activity are usually classified in major group 22 or 27.

Diseases or disorders affecting the musculoskeletal system, including tendonitis and bursitis, which generally occur over time as a result of repetitive activity should be coded in **Musculoskeletal system and connective tissue diseases and disorders**, major group 27.

Major tears to muscles, tendons, and ligaments—such as ACL or MCL tears, rotator cuff tears, and grade III sprains and strains—are included in 1231. ACL, MCL, rotator cuff, Achilles, and biceps tears are assumed to be major unless specified to be minor or grade I or II. Sprains and strains to other muscles, tendons, and ligaments are assumed to be minor (grade I or II) unless specified otherwise.

Sprains are the stretching or tearing of ligaments, while strains are similar injuries involving muscles and tendons. If the description clearly indicates that both a sprain to a ligament *and* a strain to a muscle or tendon occurred (such as sprains and strains), use code 1238. If the description is general, such as “sprains/strains,” use code 1230.

Second degree burns are more severe and characterized by blistering, swelling and destruction of superficial tissue. Partial thickness burns that involve the superficial dermis are considered second-degree burns. Third and fourth degree burns are the most severe. They may be described as partial thickness—deep or full thickness. Use code 1591 for welders flash, friction burns, and sunburn when the degree of burn is unspecified. This division classifies the various systems of the body and applies when the functioning of an entire body system has been affected without specific injury to any other part of the body. Nor does it apply when the injury or illness is localized and affects a particular internal organ. 2.3.1 Source and Secondary Source of Injury or Illness—Definition, Rules of Selection

3.0 DEFINITION

The Source and Secondary Source identify the objects, substances, equipment, and other factors that were responsible for the injury or illness incurred by the worker or that precipitated the event or exposure. The Source and Secondary Source are coded according to the previously identified Event or Exposure as dictated by the Rules of Selection:

GENERAL RULES OF SELECTION FOR SOURCE:

3.1 Whole versus part

3.1.1 Part of a machine, tool, or vehicle

If the injury or illness was inflicted by a specific **part** of a **machine, tool, or vehicle**, name the **whole** machine, tool, or vehicle as the source of injury except when:

- the part separated from or was independent of the "whole";
- the event is overexertion involving an outside source;
- the injury was inflicted by an overhead powerline or the electrical cord of an appliance, tool, or machine;
- the injury was inflicted by the floor of a vehicle in a non-transportation incident;
- the injury was inflicted by a separate machine attached to a vehicle, such as a conveyor attached to a truck;
- the incident involved a tractor and agricultural equipment combination.

In those instances, code that **part** as source.

Items being transported by a vehicle are considered part of the vehicle. For example, if a box that is being moved by a forklift strikes a worker while still on the forklift, the forklift is considered the source.

3.1.2 Part of a structure

If the injury or illness was inflicted by a specific **part** of a **structure** (window,

*-Asterisks denote a summary level code not assigned to individual cases.

door, stairs) name that **part** as the source of injury.

3.2 Containers

When an injury or illness was produced by a filled **container**, name the container, not the contents, as the source unless the injury or illness was directly inflicted by the contents, such as hot liquids or chemicals.

3.3 Bodily motion or position

Name Bodily motion or position as the source of injury or illness only when the injury resulted solely from the stress or strain induced by the free movement of the body or its parts (voluntary or involuntary), or from the assumption of a strained or unnatural body position.

Bodily motion or position includes injuries or illnesses resulting from reaching, turning, twisting, bending, walking, climbing, running, and from efforts to recover from a loss of equilibrium, provided that the loss of equilibrium does not result in a fall or in forcible contact with an object above the working surface.

Do **not** name **Bodily motion or position** as the source of injury or illness if the injury or illness resulted from any of the following:

- falling,
- bumping into or striking an external object,
- nonrepetitive lifting, pushing, pulling, wielding, or throwing an external object.

For injuries or illnesses in which either **Repetitive motion** or **Sustained viewing** is coded as the event, select bodily motion or position as the source of injury or illness.

3.4 Choosing between multiple objects or substances:

3.4.1 When an injury results from forcible contact with two or more objects, either simultaneously or in rapid sequence, and it is impossible to determine which object directly produced the injury, select the source as follows:

- When the choice is between a moving object and a stationary object, select the moving object. *Example: If a person is struck by a rolling vehicle and thrown against a post, name the vehicle as the source of injury.*
- When the choice is between two moving objects or between two stationary objects, select that which was contacted last. *Example: If a worker is struck by a roll of paper and then a box and it is unclear which caused the head injury, code the box as the source.*

*-Asterisks denote a summary level code not assigned to individual cases.

3.4.2 When an injury or illness results from two or more different objects or substances, all of which contributed to producing the injury or illness, select the source code as follows:

- Select the "Multiple" code for that combination of objects and substances if one exists at the appropriate level;
- When the two objects or substances are in the same division and there is no appropriate "Multiple" code, select the divisional n.e.c. code for that division. If they are in the same group within a division, select the group n.e.c.;
- When the two objects or substances are not in the same division, use the code for **Other sources, n.e.c.**

3.5 Weather, atmospheric conditions, and geological events

Select **Weather and atmospheric conditions** or geological events—**Floods, Earthquakes, Avalanches**—as the source of injury or illness when that is the only possible source identified.

For example, if a worker sustained multiple injuries in an earthquake, and no other source could be determined, select earthquake as the source of injury. However, if an employee were driving in a rainstorm and was injured in an automobile accident, select the vehicle as the source.

GENERAL RULES OF SELECTION FOR SECONDARY SOURCE:

3.6 Codes to be used

Use the Source of Injury or Illness Classification Structure for coding secondary source of injury or illness.

3.7 When two objects or substances contributed to an event

In the absence of a specific rule above, if **two objects or substances** contributed to an event, name the object, or substance which was not selected as the source. If more than two objects, substances, other than source, are involved, select:

- powered or energized objects over nonpowered objects,
- moving objects over nonmoving objects,
- objects actively contributing to the event over passive objects.

3.8 Weather, atmospheric conditions, and geological events

Select **Weather and atmospheric conditions** or geological events—**Floods,**

*-Asterisks denote a summary level code not assigned to individual cases.

Earthquakes, Avalanches—as the secondary source of injury or illness when that is the only possible secondary source identified.

For example, if a worker sustained multiple injuries when struck by an object in an earthquake, select earthquake as the secondary source.

3.9 **No contributing factors**

If **no object, substance, or person** is determined to meet the definition and rules listed above, no secondary source is selected. Objects which inflict an injury, but which neither generated the source nor contributed to the event, should not be selected as the secondary source.

For example, if a worker falls from a vehicle in a transportation incident and is injured when hitting the road surface, the road is not selected as the secondary source.

RULES OF SELECTION BASED ON EVENT OR EXPOSURE:

3.10 **Violence and other injuries by person or animal**

Source: Name the person or animal responsible for the injury or illness.

Secondary source: Name the injury-producing weapon, object, or substance, if any.

Example: *If a robber shoots a store clerk in the leg with a handgun, the source would be robber and the secondary source would be the handgun.*

3.11 **Transportation incidents**

Source: Name the vehicle the worker was in or on at the time of the incident. If the worker was struck by a vehicle while on foot, name the vehicle which struck him or her.

Secondary source: Name the object or vehicle with which the worker's vehicle collided, if any. If no collision occurred, then name the contributing object or substance, such as ice, rain, etc. And if two objects were struck, code the object that most likely caused the injury.

Example: *If the worker was driving a semitrailer that collided with a passenger van, the source would be the semitrailer and the secondary source would be the passenger van. If the worker was driving a tractor pulling a combine, fell from the tractor and was struck by the combine, the source would be the combine and the secondary source would be the tractor.*

3.12 **Fires and explosions**

*-Asterisks denote a summary level code not assigned to individual cases.

Source: Name the burning substance or object or the item that exploded.

Secondary source: Name the ignition source or contributing factor, if known.

Example: *If a firefighter was burned while extinguishing an electrical fire in a warehouse, the source would be warehouse, and the secondary source would be electrical wiring*

3.13 Falls, slips, trips

3.13.1 Slips and trips without falls

Source: Name bodily motion as the source.

Secondary source: Name the object or substance that contributed to the slip or trip, if known.

Example: *If a worker trips over a box on the floor and suffers a sprain in recovering, bodily motion is the source and the box is the secondary source.*

3.13.2 Falls on same level

Source: Name the surface on or from which the worker fell.

Secondary source: Name the object or substance, if any, that contributed to the worker's fall.

Example: *If a worker slips on a patch of ice in the parking lot and falls breaking her wrist, the source will be the parking lot and the ice will be the secondary source.*

3.13.3 Falls to lower level

Source: Name the equipment or part of the structure (structural element) from or through which the worker fell.

Secondary source: Name the object or substance, if any, that contributed to the worker's fall.

Example: *If a worker fell to the ground after the roof truss on which he was standing gave way, the source would be the roof truss. The secondary source is left blank because no contributing factor other than the roof truss was mentioned.*

3.14 Contact with objects and equipment

Source: Name the object or substance that directly injured the worker.

Secondary source: Name the object or substance, if any, that contributed to the

*-Asterisks denote a summary level code not assigned to individual cases.

contact.

Example: If a worker is injured from a box falling from a forklift, the box is named as the source, and the forklift is selected as the secondary source.

3.15 Exposure to harmful substances or environments

Source: Name the substance or environmental condition that injured the worker.

Secondary source: Name the object or environment through which the worker was exposed.

Example: If a worker suffers heat exhaustion while cleaning the interior of a tanker truck, heat would be named as the source and the tanker truck interior would be the secondary source.

3.16 Overexertion and bodily reaction

3.16.1 Overexertion involving outside sources

Source: Name the object over which the worker was exerting physical effort.

Secondary source: Name any contributing object or substance, if any.

Example: If a worker strains her back while lifting a box, code the box as the source. Leave secondary source blank since there was no contributing object or substance.

3.16.2 Repetitive motion and bodily reaction

Source: Name bodily motion or position of the injured, ill worker.

Secondary source: Name the contributing equipment, object, or substance, if any.

Example: If a worker suffers tendonitis in the wrist from cutting meat all day, the source is bodily motion and the secondary source is the knife.

*-Asterisks denote a summary level code not assigned to individual cases.

2.3.2 Source of Injury or Illness; Secondary Source of Injury or Illness—Titles and Descriptions

The Source of Injury or Illness code structure is arranged in nine divisions, 1 through 9. Division 9 contains codes for classifying sources that are not classified or listed under any of the other divisions. The Secondary Source of Injury or Illness uses the Source of Injury or Illness titles and descriptions.

The Source of Injury or Illness divisions are arranged as follows:

1* CHEMICALS AND CHEMICAL PRODUCTS

This division includes chemicals and chemical products in various states—liquids, gases, fumes, vapors, and solids. In general, the specific chemical codes (major groups 11-17) should be used when the specific chemical or type of chemical is known. When only the type of product is known, the appropriate code for the product (major group 18) should be used. There is one exception to this rule. When the source of injury is a drug, alcohol, or medicine taken internally, use a code in section 184. Unspecified vapors or fumes—either toxic or nontoxic—that are not the product of combustion should be coded Chemicals and chemical products, unspecified, code 10. Carbon monoxide resulting from the incomplete combustion of fuels or that is contained in motor vehicle exhaust gas, blast furnace gas, or kiln vapor is coded 1741, carbon monoxide. Tobacco smoke is coded 9242. Smoke from a burning fire is coded 9243, Smoke, fire gases, n.e.c. unless the specific chemical that injured the worker is known.

3* MACHINERY

This division classifies light and heavy machinery which perform specific functions or processes under power. Machinery is defined as a combination of smaller machines (elements or parts) which are capable of motion and are contained in a stationary frame. Computer, audio, and video products, as well as heating, cooling and cleaning machinery and appliance are also included in this definition. Machines that are primarily used for transporting people or materials are classified in division 8 (Vehicles). Handheld power tools are classified in major group 72 (Handtools—powered). If a part is **known or assumed to be attached** to a machine when an injury occurs, then the entire machine should be listed as the source in this division unless the event is overexertion or the injury was inflicted by an electrical cord, overhead powerline, or floor of a vehicle in a non-transportation incident. If a part is **known to be unattached and independent** of a machine, or if it is probable that a **machine is not involved**, then that specific part should be selected as the source. The smaller parts which are used in machinery are classified in major group 44 (Machine, tool, and electric parts).

Includes: agricultural and garden machinery; construction, logging, and mining machinery; heating, cooling, and cleaning machinery and appliances; material and personnel handling machinery (e.g., conveyors, cranes, hoists, elevators, etc.); metal, woodworking, and special material machinery; office and business machinery; special process machinery; miscellaneous machinery

6* STRUCTURES AND SURFACES

This division classifies all types of structures and structural elements including building structures and systems, bridges, stadia, tunnels, towers, and dams as well as other structural elements. Also classified here are walking, working, and road surfaces. Structural elements, including doors, windows, roofs, and walls, are classified in major group 65 (Other structural elements).

If the material identified as the source of an injury is the **general floor surface** in a building or on the ground, then the appropriate structure or surface in this division should be selected as the source.

If the material identified as the source of an injury is an **independent, unattached element**, then that specific element should be listed as the source, Part or material, Division 4. Structural elements such as prefabricated roof trusses and windows, structures in their own right, should be listed as the source regardless of whether they are independent or part of a building. Any ladder that is a fixed or temporary part of any structure is classified in major group 74 (Ladders).

Includes: building systems; floors, walkways, ground surfaces; other structural elements; structures

Excludes: bricks, blocks, structural stone (411*); unattached structural metals (413*); unattached building materials (41*); ladders (74*)

61* Confined spaces

*-Asterisks denote a summary level code not assigned to individual cases.

SOURCE

This major group classifies structures that are considered confined because their configurations hinder the activities of employees who must enter, work in, and exit them. A confined space has limited or restricted means for entry or exit, is not designed for continuous employee occupancy, and there is increased risk of exposure to serious physical injury from hazards such as entrapment, engulfment and hazardous atmospheric conditions. A workspace is included if it contains, or has the potential to contain a hazardous atmosphere; contains a material that has the potential to engulf an entrant; or has walls that converge inward or floors that slope downward and taper in a smaller area which could trap or asphyxiate an entrant. Spaces coded in this section may include spaces not considered as confined according to OSHA.

These codes would typically be used as the secondary source for incidents involving confined spaces.

Includes: ditches, channels, trenches, underground vaults, tanks, storage bins, manholes, pits, silos, process vessels, pipelines, underground mines and tunnels, tanker truck interiors, confined spaces on ships

Excludes: building exteriors (62*), passenger vehicles (841*)

72* Handtools—powered

This major group classifies all of the tools which are hand-held and require a source of energy to operate (i.e., electricity, gasoline, diesel, coal, air, steam, water, or gunpowder).

Powered handtools are grouped according to their common functions. If a drill bit, saw blade, or other tool part that produces an injury is **attached** to a handtool then the entire handtool should be listed as the source, unless the injury was inflicted by an electrical cord. Unattached drill bits and saw blades are classified in source group 443 (Tool parts, accessories). If a part is known to be **unattached and independent** of a handtool—or if it is probable that a handtool is not involved in the injury—then that specific part should be listed as the source. Handtool parts are classified in source group 443 (Tool parts, accessories). Certain handtools are manufactured in both powered and nonpowered varieties. If it cannot be determined whether a handtool is powered or nonpowered, it should be classified in major group 73 (Handtools—power not determined).

Specialized agricultural or construction machinery which consist of a tractor and the specialized attachment are coded as separate entities according to the rules of selection.

Incidents resulting solely from the equipment attached to the tractor, such as being caught in a baler, should be coded to the specific equipment involved. Incidents in which the worker falls from a moving tractor and is struck by the equipment being pulled are coded with the tractor as the source and the attached equipment as the secondary source.

2.4.1 Event or Exposure—Definition, Rules of Selection

4.0 DEFINITION

The event or exposure describes the manner in which the injury or illness was produced or inflicted by the source of injury or illness.

RULES OF SELECTION:

4.1 When the injury or illness occurred as a result of contact with or exposure to an object or substance, select the event or exposure which best describes the manner in which that contact or exposure occurred.

4.1.1 The event categories are listed in order of precedence, such that the categories are ordered as follows:

- Violence and other injuries by persons or animals
- Transportation incidents
- Fires and explosions
- Falls, slips, trips
- Exposure to harmful substances or environments
- Contact with objects or equipment
- Overexertion and bodily reaction
- Nonclassifiable

When two or more of these events occurred, select the first event listed above.

4.1.2 In general, when two or more events occurred within the same subcategory, select the first event listed in the code sequence.

4.2 Injuries involving the normal worksite tasks and actions of the injured worker and co-workers are considered accidental by default unless information to the contrary is provided.

*-Asterisks denote a summary level code not assigned to individual cases.

2.4.2 Event or Exposure—Titles and Descriptions

The Event or Exposure code structure is arranged so that codes are listed in their order of precedence.

The Event or Exposure divisions are arranged as follows:

<u>DIVISION</u>	<u>TITLE</u>
1	Violence and Other Injuries by Persons or Animals
2	Transportation Incidents
3	Fires and Explosions
4	Falls, Slips, Trips
5	Exposure to Harmful Substances or Environments
6	Contact with Objects and Equipment
7	Overexertion and Bodily Reaction
9999	Nonclassifiable

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

1* VIOLENCE AND OTHER INJURIES BY PERSONS OR ANIMALS

Violence and other injuries by persons or animals include all intentional injuries; injuries involving weapons (tools designed to be used as weapons, such as firearms and stun guns) regardless of intent; and injuries involving direct physical contact with persons, animals, or insects regardless of intent. Such injuries may be inflicted by another person, by oneself, or by an animal or insect.

Excluded from this division are injuries resulting from overexertion or bodily reaction, such as from lifting a patient or running after a suspect; unintentional injuries resulting from indirect contact, such as being hit by a box or ball thrown by another person; transportation incidents unless the intent was to injure the worker; injuries resulting from contact with dead animals; unintentional drug overdoses; and exposures to infectious agents unless intentional or transmitted by an insect or animal bite.

The various codes for shooting (1111, 1121, 1211 1221, and 1222) include being shot with a bullet or other projectile from a powder-charged gun, such as handgun, shotgun, or rifle. These shooting codes exclude injuries resulting from paintball guns, bows, BB guns, and stun guns, which should be coded based on intention as 1119, 1129, 1219, 1223, or 1229. Nail gun injuries are excluded from the division and coded 6242 unless determined to be intentional.

10 Violence and other injuries by persons or animals, unspecified

11* Intentional injury by person

Intentional injuries by person include cases in which the worker was intentionally injured or made ill by another person (111*) or by oneself (112*). Harmful actions by another that are unintentional or where the intent is unknown are in major group 12. Also excluded from major group 11 are cases in which the worker was purposely hit, but without malicious intent, such as during police, military, or martial arts training and during sporting events and training, such as boxing and wrestling matches (1212).

Generally, injuries involving the normal worksite tasks and actions of co-workers are considered accidental by default unless information to the contrary is provided. For example, if it is reported that a person was injured when a co-worker dropped a brick on him or her, use code 6232, **Struck by object or equipment dropped by other person**, unless there is information to indicate it was intentional.

110 Intentional injury by person, unspecified

This code is used when it is known that the injury was intentional, but it is

EVENT OR EXPOSURE

unknown whether it was self-inflicted or inflicted by another person.

1114 Strangulation by other person

Includes: choking with hands or other object

1115 Bombing, arson

Includes: shooting and stabbing when injuries are equally severe

1119 Intentional injury by other person, n.e.c.

Includes: intentional assault by vehicle, thrown object, stun gun, BB gun, nail gun, or bow and arrow

112* Self-inflicted injury—intentional

This major group includes cases where the worker was hurt by an intentional, self-inflicted injury. As with codes in 111*, injuries resulting

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

from the normal worksite tasks and actions of the worker are generally considered accidental unless information to the contrary is provided. For example, if it is simply reported that a worker hit himself in the head with a hammer, cut herself with a knife, or fell down the stairs, it should not be coded in this division. Jumps or falls would not be classified here unless it is reliably documented as a suicide or attempted suicide or other attempt to injure oneself.

Accidental drug overdoses are classified in the appropriate event category under major group 55*, **Exposure to other harmful substances**, regardless of the type of drug involved. Use codes in group 122* for cases in which it is uncertain whether the worker intended to injure him or herself such as when the coroner or medical examiner lists the manner of death for a drug overdose as “could not be determined.” Use code 1221 for cases when the worker accidentally shot him or herself.

1120 Self-inflicted injury—intentional, unspecified

1121 Shooting—intentional self-harm

1122 Hanging, strangulation, asphyxiation— intentional self-harm

120 Injury by person—unintentional or intent unknown, unspecified

*-Asterisks denote a summary level code not assigned to individual cases.

121* Injury by other person—unintentional or intent unknown

This category includes unintentional shootings by others and unintentional injuries or injuries of unknown intent resulting from direct physical contact with others, or where the contact is a normal part of the job function (such as in boxing). Injuries incurred by contact with a football helmet, boxing glove, shoe, or other apparel worn by the other person are considered to be direct physical contact.

Shooting by other person—unintentional (code 1211) includes accidental discharge of a weapon and cases in which a gun was intentionally fired but the worker was not the intended target. A police officer injured by a stun gun held by someone else during police training would be coded in 1219. Nail gun injuries are coded 6242 unless determined to be intentional.

Injuries resulting from **physical contact** in sporting events or physical training such as police or martial arts training are coded in 1212. Injuries resulting from physical contact with a person while the worker is restraining or subduing another, such as a teacher breaking up a fight, are coded in 1214. Those injuries resulting from physical contact while moving or transporting a person are coded in 1215 if the injury was unintentional or if the intent was unknown. Included in this category are instances in which a health care worker is scratched by a patient either unintentionally or when the intent is unclear. **Overexertion injuries** resulting from lifting or moving a patient or other person are coded in Division 7, **Overexertion and bodily reaction**. Exposures to infectious agents or contagious diseases, unless intentional, are classified in Division 5, **Exposure to harmful substances or environments**.

1210 Injury by other person—unintentional or intent unknown, unspecified

Excludes: unintentional nail gun injuries (6242)

122* Self-inflicted injury—unintentional or intent unknown

This section includes unintentional shootings that are self-inflicted, unintentional self-stunning, and self-inflicted injuries of unknown intent. Other instances of unintentionally injuring oneself, such as accidentally hitting oneself with a hammer or cutting oneself with a knife, are excluded from this category. Nail gun injuries are coded 6242 unless determined to be intentional. This category also excludes all instances of intentional injury to oneself (112*). 13* Animal and insect related incidents

Codes in this major group apply when an injury or illness results from animal or insect bites or other acts by animals—kicking, stomping, or scratching—regardless of potential intent. Transportation incidents involving animals (including falls or being thrown from horses being ridden) are included in Division 2. Nonvenomous bites (Events 1312, 1313) include bites from nonvenomous insects and other animals that become infected or result in a disease, such as Lyme disease or West Nile virus.

139 Animal and insect related incidents, n.e.c.

2* TRANSPORTATION INCIDENTS

This division covers events involving transportation vehicles, animals used for transportation purposes, and powered industrial vehicles or powered mobile industrial equipment in which at least one vehicle (or mobile equipment) is in normal operation and the injury or illness was due to collision or other type of traffic incident; loss of control; or a sudden stop, start, or jolting of a vehicle regardless of the location where the event occurred.

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

Cases involving pedestrians, roadway workers, or other nonpassengers struck by vehicles, powered industrial equipment, or an object struck by a vehicle or powered equipment are considered transportation incidents when they meet these criteria:

At least one vehicle was in normal operation as a means of transportation, and

The impact was caused by a traffic incident or the motion of the vehicle.

In general, for a vehicle to be considered under **normal operation**, it must be in use as a means of transportation between locations and an occupant of the vehicle must be operating it. For computer-operated vehicles, such as subways or monorails, an operator is not required for the vehicle to be in normal operation. Incidents resulting solely from the use of machine lifts (such as being struck by a bucket of a loader) when the vehicle is otherwise motionless are excluded. Cases occurring on water vessels are generally included in **Transportation incidents** provided that the vessel is in the water. See the instructions for 25*, **Water vehicle incident** for further guidelines on coding these incidents.

Roadways include that part of the public highway, street, or road normally used for travel as well as the shoulder and surrounding areas, telephone poles, bridge abutments, trees aligning roadway, etc. **Nonroadway** incidents include events that occur entirely off the highway, street, and roadway, such as on industrial, commercial, or farm premises or in parking lots. Incidents that occur partly on a public roadway are considered roadway incidents.

Transportation codes are listed in the **order of precedence** unless otherwise indicated. If more than one event occurred, code the first event listed in the code sequence. The precedence sequence is:

- Aircraft incidents
- Rail vehicle incidents
- Animal and other non-motorized vehicle transportation incidents
- Pedestrian vehicular incidents
- Water vehicle incidents
- Roadway incidents involving motorized land vehicle
- Nonroadway incidents involving motorized land vehicles

The precedence ordering also includes codes within a category. For example, if a roadway collision with another vehicle results in the worker falling from the vehicle, the case is coded as a vehicle collision (Event code 261* or 271*). **Transportation incidents** take precedence over all other event codes except **Violence and other injuries by persons or animals (1*)**.

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

Events due to a loss of control or a sudden start or stop refer to situations where no collision occurs, such as instances of whiplash caused by sudden stopping (without collision) or being struck by objects that fly forward when the vehicle stops.

Falls on or from vehicles are transportation incidents if the vehicle was in normal operation. Falls on boats and ships that are in the water are classified as transportation incidents even if the vessel is anchored and not under normal operation. Falls from other stationary vehicles that are not in normal operation are coded in the falls division. For example, a fall in the cargo bay of an airplane while it is being loaded is not a transportation incident because the plane is not in normal operation.

Crashes that result in a **fire or explosion** are transportation events. Fires that occur on vehicles with no other incident are classified under **Fires and explosions (3*)**.

Events not involving normal operation of a vehicle or which do not involve traffic incidents, loss of control, or sudden stop or start **are excluded** from Transportation incidents. For example, drivers or passengers hurt by vibration of the vehicle, made ill by carbon monoxide (without other incident), burned by spilling hot drinks without collision, or injured by general operation of vehicle (such as shifting gears) would not be coded in this section because they do not involve traffic incidents, loss of control or sudden stop or start. Instances where the vehicle coasts, rolls, slips into gear, falls off the lift during repair work or while parked do not involve normal operation of the vehicle and therefore are excluded unless that movement was brought about by collision with another vehicle.

Also excluded from transportation incidents are injuries or illnesses associated solely with the use of nontransport components of mobile equipment. For example, being struck by rising forklifts, falling trailer doors, or swinging buckets on a loader are coded in major group 62*, **Struck by object or equipment** unless the impact was also due to the travel of the vehicle under normal operation. Injuries occurring while standing beside a tractor trying to jumpstart it or while pushing a motorized pallet jack are not considered transportation incidents.

Transportation vehicles, powered industrial vehicles, powered mobile industrial equipment, and animal-powered transports include—

Highway vehicles:

**Motorized: Autos, buses, trucks, motorcycles, RVs*

**Nonmotorized: Bicycles, animal-drawn vehicles, other nonpowered roadway vehicles*

Excluded are:

Nonpowered industrial vehicles: Dollies, carts, wheel barrows

Nonindustrial, nonroadway mobile equipment

Wheelchairs—motorized and nonmotorized, stretchers, wagons

24* Pedestrian vehicular incident

Codes in this group apply to pedestrians and other nonoccupants of vehicles who are struck by vehicles or other mobile equipment in normal operation regardless of location. It also includes pedestrians struck by an object that was impacted by a vehicle, code 249. When a location is listed, it refers to the location of the pedestrian at the time of the event and not the location of the vehicle. Persons struck as they are getting out of vehicles should be considered outside the vehicle and coded in this section. Pedestrian struck by air, rail, animal, or human powered vehicles are included in 21*-23*.

Injuries or illnesses associated solely with the use of nontransport components of mobile equipment are not coded here. For example, being struck by rising forklifts, falling trailer doors, or swinging buckets on a loader are coded in group 621*, **Struck by powered vehicle—nontransport**, unless the impact was also due to the travel of the vehicle under normal operation. Also excluded from this major group are occupants of vehicles injured as a result of the vehicle striking a pedestrian and persons struck by a vehicle after falling from or being ejected from a vehicle. Vehicle occupants injured as a result of striking a pedestrian should be coded in 2629 or 2729.

Use a code in 241* if the worker is in a lane blocked off for repair. Use a code in 243* if the accident occurs on the shoulder or side of road and it is not a construction or other work zone. Codes in 244* include all areas defined as "nonhighway": industrial, commercial, residential, and farm premises; parking lots; and logging roads. Pedestrians hit by trains or aircraft are classified in 227 and 211, respectively.

Excludes: person falling from and struck by vehicle (263*, 273*); person struck by vehicle or mobile equipment in nontransport incident (621*); occupants of vehicle injured as a result of the vehicle hitting a pedestrian; pedestrians struck by air, rail, animal, or human powered vehicles (21*-23*)

25* **Water vehicle incidents**

All incidents involving water vehicle collisions, sinkings, capsizing; explosions or fires on such vehicles (including localized fires and explosions occurring on the vessel); machinery accidents; and falls on such vehicles are coded in this major group. Exceptions are incidents involving out-of-water or dry-docked water vehicles. Falls on ships and boats in the water but not in forward motion (such as at a dock or anchored) are included in this section of transport incidents since water vehicles are subject to motion at all times. Water vehicle incidents exclude injuries to swimmers or divers who voluntarily jump from a water vessel not involved in a transportation incident.

26* Roadway incidents involving motorized land vehicle

Roadway incidents include injuries to vehicle occupants occurring on that part of the public highway, street, or road normally used for travel as well as the shoulder and surrounding areas, telephone poles, bridge abutments, trees aligning roadway, etc. Incidents occurring entirely off the highway, street, or road; on industrial, commercial, or farm premises; or in parking lots are considered to be nonroadway incidents. Incidents that occur partly on a public roadway are considered roadway incidents. For example, if a passenger in a vehicle driven on a public street is injured when the vehicle runs off the roadway and crashes into a storefront, the event is considered a roadway incident.

If more than one of the events in this major group occurred, code the first event listed in the code sequence. For example, if a car driven by the injured person collided with an oncoming vehicle then hit a pole on the side of the road, code the collision with the oncoming vehicle as the event.

If available information does not indicate whether the incident occurred on a roadway or not, assume the incident was roadway and code as such. For example, if the incident is merely described as a "motor vehicle accident (MVA)" and there is no indication that the incident occurred in a parking lot or on private property, code the event 260, **Roadway incident involving motorized land vehicle, unspecified**. The interchange between a roadway and any nonroadway location (such as a parking lot) is always considered a roadway intersection.

Motorcycle overturns in normal operation are considered 2631 or 2731 (**Jack-knifed or overturned**) depending on whether or not the incident occurred on a roadway.

For vehicles or mobile equipment running off the roadway or driving surface, such as a truck falling off a bridge or tractor falling into a pond, use codes 2632, **Ran off roadway**, or 2732, **Ran off driving surface, nonroadway**. If the vehicle also overturned, the codes should be 2631 or 2731, **Jack-knifed or overturned**. If information states that the vehicle ran off the road and struck a ditch or ran into a body of water, code as 2632, **Ran off roadway**. If a worker is

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

rubbed, abraded or jarred when operating a vehicle due to the vibration, use code 671. If injured from prolonged sitting in a vehicle, code as 7332.

260 Roadway incident involving motorized land vehicle, unspecified

261* Roadway collision with other vehicle

Collisions between vehicles moving in the same direction include front-to-rear collisions and side-by-side (sideswipe) collisions. Opposite directions collisions are front-to-front or head-on. Perpendicular angle front-to-side includes broadside or t-bone collisions.

2610 Roadway collision with other vehicle, unspecified

2611 Roadway collision—moving in same direction

2612 Roadway collision—moving in opposite directions, oncoming

2613 Roadway collision—moving perpendicularly

Includes: broadside collision, t-bone collision, angle front-to-side collision, front of one car hit side of another

2614 Roadway collision—moving and standing vehicle in roadway

2615 Roadway collision—moving and standing vehicle on side of roadway

2619 Roadway collision with other vehicle, n.e.c.

262* Roadway collision with object other than vehicle

2620 Roadway collision with object other than vehicle, unspecified

Includes: struck by falling trees, flying rocks, objects falling or flying off other vehicles

2629 Roadway collision with object other than vehicle, n.e.c.

263* Roadway noncollision incident

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

Codes in this event group apply to cases in which the injured person was an occupant of a vehicle that was involved in a *noncollision roadway incident*. These are incidents in which the vehicle that the injured person occupied did not make contact with a vehicle or object other than the road or driving surface.

If more than one event in this event group occurred, code the first event listed in the code sequence. For example, use code 2631, **Jack-knifed or overturned, roadway** if a vehicle overturned, even if the vehicle ran off the roadway.

Event Code 2632, **Ran off roadway**, should be used when the vehicle occupied by the injured person was out of control and ran off the roadway and did not overturn or collide with any object or vehicle. If the vehicle hits another vehicle or object, select a code in 261* or 262*. If information states that the vehicle ran off the road and drove into a ditch or into a body of water, code as 2632, **Ran off roadway**.

Event Code 2633, **Struck by shifting load during transport, roadway**, should be used when collision is not involved and the movement of the vehicle results in the occupant being struck by a shifting or falling load. In the event that the vehicle was involved in a sudden stop or start *and* the injured person was struck by a shifting load, use the first event listed in the code sequence, 2633.

Event Code 2637, **Sudden start or stop, roadway**, should be used when *collision is not involved* and the injury resulted from the vehicle stopping or starting suddenly, such as the driver striking the steering wheel or incurring a whiplash injury when stopping suddenly for a stalled vehicle. This code excludes incidents in which the worker was injured by a shifting load (2633) or from a fall from moving vehicle (2634-2636) due to a sudden start or stop.

Injuries incurred solely by the jolting of the vehicle when hitting a defect or small obstruction in the roadway such as a pothole, or riding over a raised piece of concrete roadway are classified as 2638, **Struck bump, hole, or rough terrain in road surface**.

Falls from moving vehicles are coded in 2634, 2635, or 2636 depending on whether the worker was struck by a vehicle after falling.

Injuries or illnesses resulting from relatively routine movement of the vehicle are not included in noncollision incidents. For example, a driver may sustain a back injury or illness resulting from prolonged vibration

Incidents that occur partly on a public roadway are considered roadway incidents. For example, if a passenger in a vehicle driven on a public street is injured when the vehicle runs off the roadway and crashes into a storefront, the event is considered a roadway incident.

EVENT OR EXPOSURE

3* FIRES AND EXPLOSIONS

Codes in this division apply to cases in which the injury or illness resulted from an explosion or fire. Included are cases in which the person fell or jumped from a burning building, inhaled a harmful substance, or was struck by or struck against an object as a result of an explosion or fire. This division also includes incidents in which the worker was injured due to being trapped in a fire or whose respirator had run out of oxygen during a fire.

Excluded from this category are fires and explosions resulting from transportation incidents (Division 2) and those that are set for the purpose of injuring someone (Division 1). Injuries to firefighters resulting from arson fires intended to harm, from lifting fire hoses, and from falls not related to the fire or explosion itself, such as falls in the parking lot of a burning building, are also excluded from this category.

Injuries resulting from direct contact with a flame from a controlled heat source, such as from stove tops, ovens, burners, and grills are excluded from this category and coded in 533, **Contact with hot objects or substances**, unless the fire becomes out of control. Small scale fires are those which burn in an isolated location but do not spread to consume a building. Examples include fires in trash cans, frayed wires, cooking fires, and curtains that catch fire. Arc flashes (or burns from electrical arc flashes) are typically found in event 511*, **Direct exposure to electricity**. However, injuries resulting from a building fire that resulted from an arc flash would be coded in major group 31*, **Fires**. **Demolition or blasting explosion** (code 324) includes detonations used to implode buildings or blast mines and quarries with dynamite. Mining explosions from gases or vapors belong in 322.

For fires and explosions occurring in a single event, code the one that happened first. If the first event is unknown, defer to fires.

30 Fire or explosion, unspecified

Use only if event does not specify fire or explosion.

31* Fires

Codes in this major group apply to cases in which the injury or illness resulted from a fire or exposure to a fire, such as in a burning building. Injuries resulting from an explosion that was precipitated by a fire are coded as fires. Injuries resulting from a building collapse after the fire has been extinguished are classified in structure collapse (65*). Unintentional fires are coded here. If it is known that the fire was started explicitly to harm someone, it should be coded in **Intentional injury by other person**, more specifically **1115, Bombing, arson**. Contact with a controlled heat source such as a flame from a stove is coded in

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

533, Contact with hot objects or substances, unless the person's clothes catch fire (314).

310 Fire, unspecified

311 Collapsing building, structure, or structural element during fire

312 Other structural fire without collapse

313 Vehicle or machinery fire

Excludes: fires on vehicles during normal transport operation (2639 or 2739)

314 Ignition of clothing from controlled heat source

315 Small-scale (limited) fire

316 Forest or brush fire

317 Ignition of vapors, gases, or liquids

319 Nonstructural fire, n.e.c.

32* Explosions

Codes in this major group apply to cases in which the injury or illness resulted from an explosion. An explosion is a *rapid expansion, outbreak, bursting, or upheaval*. Codes in this major group apply to large explosions (tank cars) and small explosions (bottles, aerosol cans). They apply to unintentional and intentionally-set explosions, such as injuries resulting from exploding fireworks or from exploding ordnance during military training, unless the intent was to harm. Injuries resulting from a fire that was precipitated by an explosion are coded as explosions. Bombings that were set to intentionally injure are included in Division 1, **Violence and other injuries by persons or animals**.

Explosion of pressure vessel, piping or tire includes explosions of aerosol cans and automobile tires. Incidents in which a non-pressurized container, such as a gasoline tank, explodes are coded in 323.

320 Explosion, unspecified

321 Dust explosion

322 Explosion of nonpressurized vapors, gases, or liquids

323 Explosion of pressure vessel, piping, or tire

324 Demolition or blasting explosion

329 Explosion, n.e.c.

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

4* FALLS, SLIPS, TRIPS

Falls, slips, trips include falls on the same level, falls and jumps to lower levels, falls and jumps that were curtailed by a personal arrest device, and slips and trips that do not result in a fall. The division also includes other nontransport-related falls resulting in drowning or other nonimpact injuries.

The order of precedence is reflected in the order of codes. Falls while on a vehicle in normal operation are considered **Transportation incidents** (Division 2); parachute jumps are also considered transportation incidents. Falls from vehicles that are not in normal transport operation are coded under **Falls, slips, trips**. Falls from a seated position are **Fall on same level**, while falls that occur while the worker is standing on a chair are considered **Fall to lower level**. Falls through a non-structural surface, such as ice, are to be listed in **Fall through surface**.

Slips or trips without falling are included in the **Falls, slips, trips** division. A trip is differentiated from a slip by the existence of a foreign object over which the injured worker stumbled. Slips are generally on flat, smooth, or slippery surfaces; trips occur when the injured worker makes contact with an uneven surface or an obstruction, such as a curb or box.

Fall to lower level applies to instances in which the injury was produced by impact between the injured person and another surface of lower elevation, the motion producing the contact being that of the person, under the following circumstances:

-the motion of the person and the force of impact were generated by gravity, and

-the point of contact with the source of injury was lower than the surface supporting the person at the inception of the fall.

Cases in which the worker was injured while stepping to a lower level (such as, off a ladder, out of a vehicle, or off a curb) and there is no indication of forcible contact from a fall (such as a fracture or a bruise) or other incident, should be coded in 73*, **Other exertions or bodily reactions**. Injuries sustained as a result of the employee jumping from an elevation should be coded in major group 44*, **Jumps to lower level**.

Falls through an opening in the floor that already existed (such as an attic trap door opening) or through a work surface are coded as 432*, **Fall through surface**. If a floor surface or structure collapses causing the worker to fall or jump, the fall is coded as 431* or 441*.

Falls from ground level to lower level, such as storm drains or sewers, are included in 433*, **Other fall to lower level**.

Includes: fall or jump curtailed by lifeline or body harness

49 Fall, slip, trip, n.e.c.

5* EXPOSURE TO HARMFUL SUBSTANCES OR ENVIRONMENTS

Codes in this division apply to cases in which the injury or illness resulted from a condition or substance in the work environment. Excluded from this category are exposures resulting from violence and other injuries by persons or animals, transportation incidents, and fires and explosions.

50 Exposure to harmful substances or environments, unspecified

51* Exposure to electricity

This code applies only to cases in which the injury or illness resulted from *contact with electricity, including lightning*. Cases of electric shock and electrocution are classified here. Contact may be made directly from the power source to the person, such as touching a live wire or being struck by an electrical arc. Items that are intentionally electrified, such as electric fences, should be considered direct exposure to electricity (511*). Arc flashes (or burns from electrical arc flashes) are included here (511*). Contact may also happen indirectly, such as when a conductive material touches a source of electricity. Indirect exposure includes when a pipe being held contacts a power line, when a crane touches a power line, or when electricity is transmitted to an injured worker through a wet surface. Indirect exposure typically occurs when an object is unintentionally electrified. When sufficient information is not available to determine if the event involved direct or indirect exposure to electricity, the event should be coded as **511*, Direct exposure to electricity**.

In general, household voltage should be at the 220 volts or less categories (5111 and 5121), while power lines and some industrial transformers operate at greater than 220 volts (5112 and 5122). When uncertain as to the voltage, assume household voltage to be 220 or less, and overhead wire voltage to be greater than 220.

*-Asterisks denote a summary level code not assigned to individual cases.

EVENT OR EXPOSURE

In instances where an electric shock initiates a chain of events which results in an impact injury, the appropriate impact event code should be selected. For example, if an electric shock knocks a worker from a ladder fracturing his leg, the event should be coded in Division 4, **Falls, slips, trips**.

Environmental injuries or illness in this major group include: heat exhaustion, heat stroke, freezing, frostbite, or hypothermia. Contact with hot objects or substances include contact with heat sources such as stoves, welding torches, or heated fluids; contact with fire and flames from stoves, campfires, torches, cigarettes, furnaces, etc.; and radiant heat emitted from such sources. Contact with cold objects includes contact with dry ice, freezer surfaces, liquid nitrogen, etc. Contact with objects that are cold because it is cold outside, such as outside metal

55* Exposure to other harmful substances

This category applies to cases in which the injury or illness resulted from the inhalation, absorption (skin contact), injection or needlestick, or ingestion (swallowing) of harmful substances. Codes in this major group should be used for instances of poisoning, allergic reactions, contagious and infectious diseases, and drug overdoses. The major group excludes medical complications and sequelae of the initial injury, such as exposures to bacteria causing a cut or laceration to become infected.

Includes: exposure to caustic, noxious, allergenic substances, drugs, infectious agents

554* Exposure to harmful substance through skin, eyes, or other exposed tissue

Codes in this event group apply when the injury or illness was produced by poisons, infectious agents, or other harmful substance that were transmitted by absorption or piercing of the skin. Contacts with hot or code objects are classified in 53* **Exposure to temperature extremes**.

Code 5541 only includes needlesticks that were unintentional and either transmitted an infectious agent or generated a reaction to the drug injected. When the cut or puncture wound is the most severe injury or illness resulting from a needlestick, (that is, when the nature is coded as some sort of open wound), then use the appropriate event category in Division 6, **Contact with objects and equipment**. Diseases resulting from contacts with other infectious sharps, such as scalpels or tubing are also classified in 5541. This code does not include needlesticks or sharp injuries without exposure to harmful substance. These should be coded as either needlestick without exposure to harmful substance (61) or injured by breaking object in hand (6251). Reactions to medicines and vaccines given intravenously are coded in 5542 unless the intention was for recreational

This group also includes cases in which a person is injured from trying to free oneself after being caught in an object or machine.

Injuries occurring when the injured part of body is inside a machine or equipment, or between two or more parts of the source of injury should be included here. Strangulation injuries occurring when clothing is caught in running equipment should be coded in the appropriate category in 641*. Cases in which the worker is struck by a moving vehicle not in normal operation (as defined in Division 2) and caught between the vehicle and another object are coded in 621*. Codes in 622* are used for injuries occurring when a part of the injured person's body is crushed, pinched, or caught under a rolling or sliding object such as a hand cart or a log.

Codes in this major group also do not apply when the source of injury is free flying or falling, or collapsing material. When the source of injury is falling or freely flying, or collapsing, the event should be coded in group 623*, **Struck by falling object or equipment** or major group 65*, **Struck, caught, or crushed in collapsing structures, equipment, or material**. EVENT OR EXPOSURE

7* OVEREXERTION AND BODILY REACTION

Codes in this division apply to cases, usually non-impact, in which injury or illness resulted from *free bodily motion, from excessive physical effort, from repetition of a bodily motion, from the assumption of an unnatural position, or from remaining in the same position over a period of time.*

70 Overexertion and bodily reaction, unspecified

71* Overexertion involving outside sources

Overexertion involving outside sources applies to cases, usually non-impact, in which the injury or illness resulted from *excessive physical effort directed at an outside source of injury or illness.* The physical effort may involve lifting, pulling, pushing, turning, wielding, holding, carrying, or throwing the source of injury or illness. The injury can be from a single episode or from repetitive exertions involving outside sources, such as repetitive lifting. Typically, if the injury results from an object being carried or lifted, the event is overexertion involving an outside source.

Free bodily motions that do not involve an outside source of injury or illness are classified either in major group 73*, **Other exertions or bodily reactions**, or in major group 72*, **Repetitive motions involving microtasks**. Use section 711* for cases involving moving, stacking, loading, and handling when it is unclear which specific type of movement resulted in the injury or illness. When an overexertion injury or illness results from using a wrench and the type of movement involved is not specified, use event code 7130.

If the physical effort involves moving or transferring that would primarily be described as pushing or pulling such as moving a piano, code **Overexertion in pushing, pulling, or turning** (712*).
